INTRODUCTION.

THE fifth decennial Census of the dominions of Lt.-General His Highness Maharaja Sir Madhav Rao Scindia, G.C.S.I., etc., was taken on the night of the 18th March 1921, between 7 P. M. and midnight.

2. The dates of previous enumerations are given in the inset table. All

1881	17th February.
1891	26th February.
1901	1st March.
1911	10th March.

these four enumerations have been synchronous with those of British India, with the only exception of the wild tracts inhabited largely by primitive tribes such

as Bhils, etc. In the present Census, however, the enumeration was synchronous throughout the State without an exception.

3. In the first two enumerations, an abridged form of the British India Schedule was used and information was collected only under the following heads :—

- (1) Name (2) Sex (3) Age (4) Religion (5) Caste (6) Birthplace (7) Occupation. The British India Schedule containing other particulars such as Education, Civil Condition, Infirmities, etc., was used only for the enumeration of Cantonments, Agency Headquarters, of the Railway population and of European residents, in the State. Since 1901, an uniform Schedule, the British India Schedule of 16 columns, has been adopted throughout.

4. It was only in 1901 that all the operations connected with Census were done by the State agency. In other previous Censuses the preliminary operations of enumeration only were carried out by the State, while the subsequent ones of Abstraction, Tabulation, etc., were done at Indore under the direction of the Provincial Superintendent of Census Operations, Central India Agency, the Darbar paying the charges on each occasion for them. The results of the enumerations have, however, been embodied in separate reports with separate Tables for the State although the figures for Gwalior have, at the same time, been shown in the Central India Report together with those of the other States of Central India Agency. In 1901 only, the Gwalior Volume was classified among the Imperial Series.

5. The present Census of Gwalior has some important features distinct from the past ones. It was for the first time that the Gwalior Census was conducted independently of the Census Superintendent for Central India. The next feature of it was the direct enumeration by the State agency of the 37 heretofore called guaranteed Estates which have since 19th March 1921 merged into the parent State of Gwalior and the Censuses of which up to 1911 were carried on under the supervision of the Political authorities of Central India. Gwalior has now been reckoned as a separate Provincial unit isolated from Central India, its volume being 20th in number in the all-India Series. The enumeration, of the foreign Railways passing through the State, by the Darbar Census Commissioner was also a new aspect of the present Census.

6. In anticipation of the present Census, the Darbar thoughtfully passed a Census Manual containing general instructions for correct enumeration.

The Manual not only authorised the Darbar Census Commissioner to enlist the services of any servant or subject of the State, but also nominated certain Revenue, Judicial, Municipal and Military officers to be *ex-officio* Charge Superintendents. The Manual was, therefore, an instrument of power and facilitated the Census work a good deal.

7. As provided in the Manual, the Darbar appointed a whole-time Census Commissioner with two whole-time Assistants, one for each Prant, in the present Census unlike those of 1901 and 1911 when the Inspector-General of Education worked as Census Commissioner, in addition to his own duties. This increased the expenditure no doubt but secured greater efficiency.

The Census Office at Headquarters was opened on the 1st of January 1920 and that of Malwa shortly afterwards.

8. Complete details of the procedure adopted for taking the Census will be given in the volume dealing with the administration of the Census. It will be sufficient here to give a brief account of the main operations connected with it.

The villages and towns were divided into convenient blocks each containing 40 to 50 houses in charge of an enumerator, the blocks were grouped into circles, each circle containing from 10 to 15 blocks and placed in charge of a Supervisor. The charges which generally corresponded with a Pargana or Tehsil, a Jagir holding, a Municipal town or a Military Cantonment were usually placed under a Tehsildar, a Pargana Judicial Officer, a Kamdar or a Chairman of Municipal Board or a Secretary of the same. No Railway station being big enough to be treated as a Charge, all the Railway stations and Settlements were included in their corresponding civil charges. For Railway enumeration, Circle Supervisors and enumerators were appointed from the Railway Staff and were timely supplied with Manuals rendered into English and other instructions. In big towns such as Lashkar, Ujjain, etc., the Charge Superintendents were given one or more Assistants to push on the preliminary operations. Extensive Tehsils were split up into two or more charges. The Darbar Census Manual containing general instructions in Hindi for correct enumeration and necessary circulars and letters amplifying and illustrating the same in the light of the Imperial Census Code were issued to all Charge Superintendents from the Head Office. Special arrangements in accordance with instructions issued by the Census Commissioner for India were made for the enumeration of travellers, passengers in train, religious congregations and other floating population. Industrial Schedules A and B were issued for the Census of Industrial concerns of the State employing ten or more persons.

9. The house numbering was begun about the 1st of October 1920 at the earliest and finished by the middle of November at the latest. The definition of a house in the Imperial Code was clearly explained in the State Manual and illustrated by diagrams. Each house was given a separate number and the numbering ran in consecutive series generally for a circle but sometimes for a whole village, a town or a military station. At the commencement and at the termination of a circle, three numbers were given to a house, showing the circle, block and house. The commencement of a block

was indicated by a triangle  and its termination by a circle 

The top number denoted the Circle, the middle the Block and the bottom the House. For the intermediate houses, only the house number, *i. e.*, the lowest number was given.

10. Before the commencement of the preliminary enumeration which began on the 15th of January in villages and on the 15th February 1921 in towns, the enumerator was supplied with all possible instructions for writing up the entries of persons found in the houses of his block. A good number of enumerators was adequately trained in the work of enumeration by the Assistant Census Commissioners, who, on their part, received necessary instructions for the successive stages of Census Operations at the Training Class at Sehore started by Lt.-Col. Luard, the Provincial Superintendent of Census Operations, Central India, who in the beginning had supervisional jurisdiction over Gwalior. The enumerators besides being trained were furnished with complete instructions dealing with the procedure to be followed in the successive stages of enumeration and the special instructions to be carefully attended to, in addition to those in the Darbar Manual. Their records were not only checked by the Supervisors and Superintendents but the Assistant Census Commissioners who were all along on tour during the preliminary enumeration, checked and corrected any discrepancy that came to their notice during inspection.

To ensure accuracy in the Census the touring officers of the State were requested to communicate to me any error, omission or negligence on the part of the Census Staff that would come to their notice. Babu Umrao Behari Mathur, Naib Suba, Bhilsa, and Munshi Janki Prasad, Deputy Director, Co-operative Banks, were the only officers that complied with my request for which my warm thanks are due to them. I myself was on inspection tour to important places.

On the night of the 18th of March 1921 the enumerator went round his block and brought his record up to date by striking out the names of persons who had died or left the block, filling in entries for fresh arrivals and newly-born infants.

11. On the morning of the 19th March 1921 the enumerators of the various blocks met the Circle Supervisor at a place previously arranged and prepared the first totals of their blocks, showing the number of occupied houses, males, females and total population for each block. The Supervisor checked these and combined the block totals into a circle total and sent those on to the Charge Superintendent who repeated the operation for his charge and telegraphed the charge total to the Census Commissioner, Gwalior State.

**Provincial
Total.**

The total for the whole State was telegraphed to the Census Commissioner for India on the 23rd March 1921. The final total varied from the preliminary figures by '2 per mille or '02 per cent. as against '1 per cent. of 1911. The provisional total was less than the final total by 867.

12. As in the last Census, we met with no objection or opposition from the public in carrying out our enumeration. Even the most backward and wild classes readily replied to what was asked of them.

13. After the Provisional totals were despatched, the Enumeration Books for all charges were packed by charges for the subsequent purposes of Abstraction, Tabulation and Compilation to the Central Office at Lashkar. These books were checked with Circle and Charge Summaries and made over to the Record-keeper to be arranged by Pargana and stacked. For the Military Cantonments under the British Government censused by their own

Abstraction.

agency no enumeration books were received, only the results of the enumeration in the form of the prescribed Imperial Tables were supplied to my office.

The Code of Instruction for copying on slips the particulars of each person enumerated, for sorting the written up slips and tabulating and compiling the results was issued by the Census Commissioner for India in a separate volume, the Imperial Code, Part II. This was followed in all the processes and no extra Manual or Code was issued by the State. Three branches were started for slip-copying in different parts of the town in addition to the 12 gangs of Abstraction Staff located in the halls of the Central Office (Jal Mahal).

The system of posting entries in slips from the Schedules was the same as in 1911 and differed from 1901 in this, that one slip was used for each person instead of two written up in 1901. The size of the slip was $4\frac{1}{2}'' \times 2''$ and the number of the columns of the schedule were printed in Hindi and English on one side only. Religion was indicated by the colour, while sex and civil condition by symbols printed on the slips as below :—

Male unmarried.	Male married.	Male widowed.	Female unmarried.	Female married.	Female widowed..
					

Five colours were used to denote the five main religions and green was to indicate "other religions." The other religions were Arya, Jew, Sikh, Parsi, etc. The name of each of these minor religions was written on the right hand top corner of the slip.

Industrial Schedule.

14. The information collected in Industrial schedules was copied on two slips, one containing the information in Schedule A and the other the entries in Schedule B. The two slips were distinguished from each other by size and colour, white being used for Slip A and Badami for B. Slips of Badami colour were used both for skilled and unskilled labourers, the industrial concerns being very few in number in the State. The Slip A was of the size $6'' \times 3''$ while Slip B of $4\frac{1}{2}'' \times 3''$.

For the preparation of Subsidiary Table IX of the Occupation Chapter, special statistics were collected for Railways, the Irrigation, Postal and Telegraph Departments on forms recommended by the Census Commissioner for India.

The Abstraction office was started in the second week of April and the process was completed by the 3rd July, 1921. The number of copyists rose from 98 to about 300. The average outturn of each copyist was 144. The maximum outturn 166 was reached in the 10th week of the abstraction work when the number of copyists was 351.

The slips for Infirmities were written up separately as well as the entries in the Industrial Schedules.

Tabulation and Compilation.

15. After Abstraction the operation of sorting was taken in hand on the 4th July, 1921. Before the slips were given to sorters, they were checked with 'A Registers' compiled by the Supervisors and any error found was corrected. The process of sorting was done by Parganas. For sorting and compilation Lashkar City was treated as a separate unit, so the 39 Parganas of the State together with Lashkar City made up 40 units altogether.

The first six Tables needed no sorting, for, the 'A Register' of the Supervisors gave the figures direct. Sorting was done from Table VII onwards. Sorting for tables on caste, birthplace and occupation was reserved for the compilation stage, to be done by more efficient and experienced men as the sorters were not expected to correctly classify the slips for these tables. Weekly progress Reports for sorting in the form prescribed by the Census Commissioner for India were regularly submitted to the latter.

The work of compilation went on *pari pasu* with sorting, but the regular compilation office commenced running from the 1st of December 1921 when the sorting process was altogether finished, and continued till the middle of April, 1922. For compilation work most of the Supervisors and Assistant Supervisors who were engaged in Abstraction and sorting were retained. In the last Census, each of the first six Tables had three divisions; in the first division the figures for the then State proper were shown by Parganas, in the second were placed those of the guaranteed or mediatised holdings and in the third or last division were the figures of British Cantonments shown separately. The figures for the heretofore called guaranteed holdings and those of Cantonments being thrown in the respective districts in which they lie, this arrangement by division has altogether been done away with in the present Census. But from Table VII onward the figures dealt with in the past were the figures of the then State proper exclusive of the Feudatories, Cantonments, etc. This has brought about an almost insolvable difficulty in the present Census in matters of comparison and has at times rendered comparisons impossible as the present figures in all the Tables are inclusive of the British Cantonments and Feudatories both. The percentage figures given in marginal notes and discussed in some chapters will not, therefore, agree with those shewn in the subsidiary tables.

16. Under instructions of the Census Commissioner for India the first six Tables have been shown unlike the last Census by districts instead of by Parganas. But two Provincial Tables have been prepared to show the figures by Parganas. The figures of the Pargana Gangapur in the Rajputana Agency have everywhere been shown separately as well as included in its own District Mandasor.

Table XIII (caste) has been much abridged this time in accordance with the suggestions of the Census Commissioner for India. Lastly, Industrial Table XXII has been compiled for the first time from the information collected in the Industrial Schedules.

17. In the Census of 1901 and 1911 there was no whole-time Census Officer, the Census Commissioner, his Assistant at Malwa and almost the whole of his staff were paid from the respective Departments to which they belonged. Census tours were for the most part conducted with educational tours and the allowances consequently were met from the educational budget. Strict comparison of the cost of the present Census cannot therefore be made with that of the previous ones. For an approximate comparison the pay of the Census Commissioner and his Assistants should be deducted from the sanctioned amount of rupees one lac for the present Census; the cost in that case would come to 3.5 pies per head of the population as against 2 pies in 1911 and in 1901. Considering the high rates prevailing in these days, this cost is not high.

Cost.

Report.

18.* I am sorry I could not bring out the Report as early as I originally intended. The draft report was completed by the first week of August and all the chapters in type were sent to the Census Commissioner for India by the end of the month and to the Press by the first week of September but the printing was very much delayed for some unavoidable and unforeseen reasons.

Acknowledgments.

19. The work of enumeration with the preliminary arrangements generally fell upon the Pargana Officers of the Revenue, Judicial and Educational Departments. All these gentlemen, with their Subordinate Staff of supervisors and enumerators, with rare exceptions, did their duties well; to all of them my cordial thanks are due. Some that did specially good work and had to grapple with difficult situation were awarded certificates of merit by the Darbar.

I am thankful to Munshi Haqdad Khan who for 20 months worked as Assistant Census Commissioner for Gwalior-Isagarh Prant. He proved himself indispensably serviceable to me in the early operations leading up to Abstraction.

As regards my Office Staff all did well and deserve my thanks. But I should like to particularly mention the very keen interest and devotion to duty which my Special Assistant Babu Sukumar Chandra Guha, B. A., and the Tabulation Superintendent Pandit Gangadhar Ganesh Joshi evinced in their work. Mr. Guha helped me beyond all expectations in the writing of the report and Pandit Joshi fully utilised his past experience of Census work and with the co-operation of Daya Ram Gupta, Head Compiler, successfully carried through the laborious operations of Tabulation and Compilation. My Office Superintendent Munshi Narayan Prasad Verma, managed the Office well and also worked as an Inspector of Abstraction.

It is gratifying to note that the services of Munshi Haqdad Khan, Pandit Gangadhar Ganesh Joshi and Babu Sukumar Chandra Guha were recognised by the Darbar by the award of cash rewards at the last Birthday Darbar of His Highness the Maharaja Scindia.

I am obliged to Lt.-Col. Luard, I. A., for his general help and very kindly reading through most of my draft chapters of the Report.

To Mr. J. T. Marten, I.C.S., Census Commissioner for India, I must express my indebtedness for his cordial help, able guidance and kind loan of books which proved very useful to me.

Finally and above all I beg to acknowledge my debt of gratitude to the Darbar for kindly providing me with all the requisites of a successful census and reposing full confidence in me,

LASHKAR-GWALIOR, }
Dated the 27th December, 1922. }

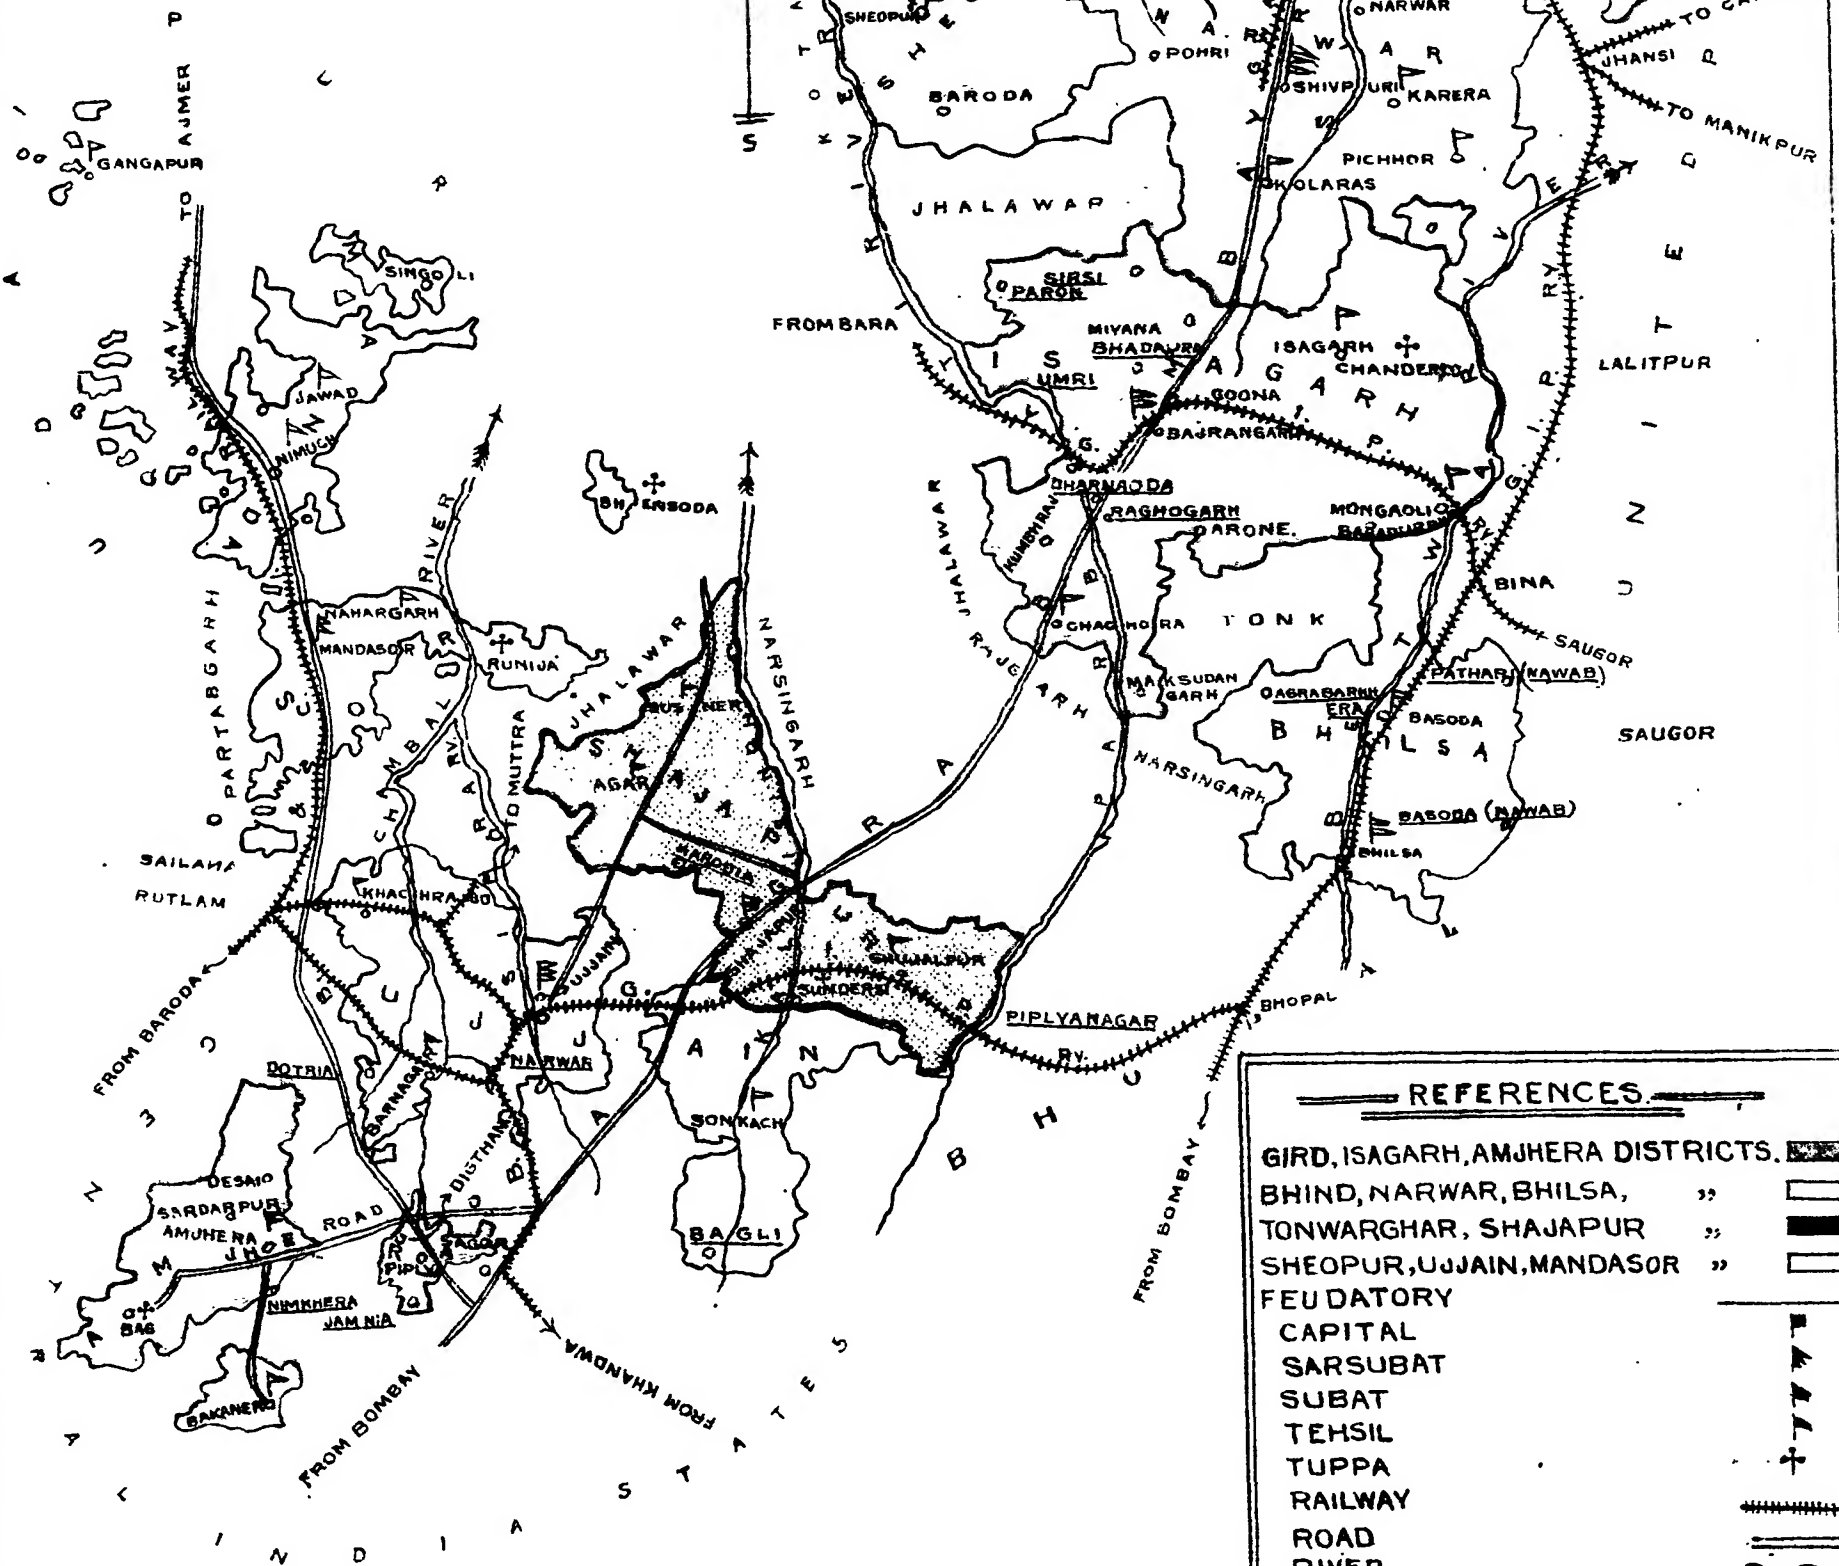

JANAKI NATH DATTA,
CENSUS COMMISSIONER,
Gwalior State.

MAP OF Gwalior State.

32 24 16 8 0 32 64 96

CHAPTER I.

Distribution and Movement of Population.

Gwalior State, as will appear from the annexed map, chiefly consists of two well-defined sections, the Gwalior (Northern) and the Malwa (Southern) section. "The Northern section consists of a compact block of territory bounded on the north and north-west by the Chambal river, on the east by the British districts of Jalaun, Jhansi, Lalitpur and Saugor, on the south by the States of Bhopal, Tonk, Khilchipur and Rajgarh and on the west by those of Jhalawar, Tonk and Kotah of Rajputana. The Malwa section is made up of several detached districts between each of which portions of other States are interspersed and which are themselves intermingled in bewildering intricacy. In the Malwa section is included, for administrative purposes, the Amjhera District which lies, however, mainly out of Malwa in the Vindhya region. The small isolated Pargana of Gangapur, belonging to this State, with an area of 26 square miles, lies in Rajputana."*

Situation.

2. The Gwalior State, which was so long included in the Central India Agency, now forms, as has been said in the Introduction, a separate Political unit, the Resident at Gwalior having direct relations with the Government of India. Another momentous change that has taken place simultaneously is the transference to the Suzerain Darbar of the 37 Tributary Estates so long *guaranteed* by the British Government. A short account of these two important political changes, so kindly furnished to me by the Political Member, is given below :—

Political Changes.

Mediatized or Guaranteed Estates.

"At the commencement of the 19th Century the peace of Hindustan was very much disturbed by the prevalence of the predatory system which left the country round about in so disorganised a state as to be unsafe even for troops to pass through. The British Government desired to restore order and eventually with the assistance and co-operation of Maharaja Dowlat Rao Scindia succeeded in doing so by 1818.

"The overthrow of the petty chieftains who were hitherto given to marauding and levying blackmail left them without ostensible means of subsistence and in consequence sore and disaffected. To put a stop to this state of affairs the British Government undertook the task of pacification of the country and appointed Sir John Malcolm to effect this end. As a result of this, Sir John and his Assistants effected certain settlements which involved the *guarantee* of the British Government that whatever was settled would be scrupulously observed. These settlements assured to the Thakurs the continuance in perpetuity or for life-time, according as the terms of the grants provided, of their holdings and Tankas subject to good conduct and in many cases the duties of watch and ward in respect of portions of the out-lying Darbar territory. In course of

time these settlements, contrary to the intentions of the British Government, created a privileged and quasi-independent position for the Thakurs, and British Officers were led to intervene in matters with which Sir John's mediation had no concern. This state of affairs naturally could not survive, for long; the progress attained by the Gwalior administration in the march of years and the consciousness of Darbar's rights which arose in consequence and ever since His Highness the present Maharaja assumed the reins of Government the final abandonment of the system that had come into vogue was pressed for. The Darbar's contention eventually prevailed and on the 15th of March 1921 all these holders were handed over to the jurisdiction and control of the Darbar."

Gwalior Residency.

"After the Treaty of Salbai (1782) Mr. David Anderson was appointed Resident at the Court of Maharaja Mahadji Scindia, which was merely a moving camp until 1810 when Maharaja Dowlat Rao Scindia permanently fixed his headquarters on the spot where Lashkar City now stands. Until 1843, the Resident at Gwalior used to correspond direct with the Government of India but in that year only a few months after the demise of Maharaja Jankoji Rao Scindia, Gwalior was placed within the sphere of the Agency of Lieutenant-Colonel William Henry Sleeman, the then Agent to the Governor-General for Saugor and Nerbudda Territories and Commissioner for Bundelkhand (later styled as Agent to the Governor-General for Scindia's Dominions), whose headquarters were at Jhansi, with Lt. Sir Richmond Shakespear as his Assistant in immediate charge of the Gwalior affairs. This arrangement continued till 1854 in which year the Gwalior Political Functionary (whose designation was in 1852 changed from "Assistant for the Affairs of Scindia's Dominions" to "Political Agent") was made subordinate to the then newly created Agent to the Governor-General for Central India whose headquarters were at Indore. In 1882 the designation of Political Agent was again altered to Resident, but the latter still continued to be under the control of the Central India Agency. On the 15th March 1921, however, by the Government of India, Foreign and Political Department Notification No. 754-Est. A. of that date (*vide Gazette of India*, Part I, dated the 19th March 1921, p. 432) the status of the appointment of Resident at Gwalior was raised with the approval of the Secretary of State for India, to a Residency of the 2nd Class, thus reverting, after nearly 80 years, to the arrangement which existed until the year 1843. The Resident at Gwalior, like the Residents accredited to the Hyderabad, Mysore, Baroda and Kashmir States, now corresponds direct with the Government of India."

Natural Divisions.

3. The three Natural Divisions of Lowlying, Plateau and Hilly tracts adopted by Mr. Johnstone in 1901, have been kept this time also. The Lowlying tract has an area of 7,803 square miles and average elevation of 700 ft. above the sea-level, the Plateau covers 17,259 square miles with an average elevation of 1,600 ft., the Hilly portion has about 1,321 square miles of area and a mean height of 1,800 ft. above the sea-level.

Climate.

The climate of these divisions is characteristic of their geographical position and physical features. Thus, while the Lowlying area, generally, has extremes of climate, both in the hot and cold seasons, the Plateau enjoys a moderate and equable one. The climate of the Hilly tract is less temperate than that of Malwa.

Administrative Divisions.

4. The Administrative Divisions of Gwalior are the same as in 1911, *i.e.*, there are two *Sar Subats* or Commissionerships, called Gwalior-Isagarh and Malwa Prants (Divisions), each being placed under a *Sar Suba* or Commissioner. The Gwalior-Isagarh Prant has six districts, each under a District Officer, called a *Suba*, while the Malwa Prant has five districts. The districts are divided into Tahsils or Parganas, each in charge of a Kamasdar or Tahsildar. Thus the whole State has 11 districts and 39 Tahsils in all. Gwalior Prant, thus, contains the whole of the Lowlying section and part of the Tableland, Narwar and Isagarh; Malwa Prant includes the Hilly tract of Amjhera.

5. The statistics of area and population are given in Tables I and II and the Provincial Table I. Tables I and II give the information by districts. Provincial Table I gives the same by Tahsils.

Reference to
Statistics.

The following Subsidiary Tables are given at the end of the Chapter showing :—

- (1) The density, water-supply and crops.
- (2) Distribution of population classified according to density.
- (3) Variation in relation to density since 1901.
- (4) Variation in natural population.
- (5) Variation by natural divisions classified according to density.
- (6) Persons per house and houses per square mile.

6. Including the Tributaries, British Cantonments, and Residency Headquarters, the area of the State, as found in the last Census, comes to 26,383 square miles as against 25,863 square miles in 1911. The increase of 520 square miles is reported from some Feudatories as a result of recent survey.

Area

In extent of territory, Gwalior is the fourth of all the Indian States, Hyderabad being first, Kashmir second and Mysore third. It is more than three times as large as Baroda (8,127 square miles) and Travancore (7,625 square miles). It is nearly equal to Scotland (30,406 square miles) and a little less than the combined areas of Belgium (11,373 square miles) and Denmark (16,566 square miles).

7. Before proceeding to discuss the population figures, it is necessary to state that in Indian as well as in English Census Reports the phrase 'population of any given area' means the people actually found within its boundaries on the Census night. So the population of Gwalior enumerated on the 18th March, 1921, comprises all present within the State boundary during the hours of enumeration and includes private residents, both permanent and temporary, the inmates of institutions like Jails and other establishments, the military population, and the vagrant population, *i. e.*, the record is of *de facto* and not *de jure* population.

Population
Defined.

8. The population of the State as found on the 18th March 1921, including that of the Tributaries, is, 3,195,476 as against 3,237,158 in 1911, and thus shows an actual decrease of 41,682 souls or 1·3* per cent. in ten years.

Population of
the State.

It will appear from the marginal Table that the decline of population in the

	POPULATION.		VARIATION 1911-21		DENSITY.	
	1921	1911	Actual.	Per cent.	1921	1911
Gwalior State including Feudatories, etc.	3,195,476	3,237,158	- 41,682	- 1·3	121	124
Gwalior State excluding Feudatories, etc.	3,095,514	3,125,137	- 29,623	- '9	123	124
Feudatories, etc.	99,962	112,021	- 12,059	- 10·8	81	155

37 Feudatories alone is 12,059 or 10·8 per cent. and in the State minus the Feudatories, the actual decrease is 29,623 or '9

per cent. So, evidently, towards the fall of population and consequent decrease of density of the State, as a whole, the Feudatories have contributed

*Males—·25 p. c. only. Females—2·5 p. c.

Density.

proportionately more than the parent State. If these estates were excluded the density of persons per square mile of the State would have been 123.

9. Supposing the distribution of population to be uniform the density of population of the State is 121 persons per square mile as against 124 in 1911, which means 5·3 acres per head.

In the inset diagram the relation between area and population of the three natural divisions of the State is graphically illustrated. Each white diamond represents 1 per cent. of the total area, and each black diamond 1 per cent. of the total population.

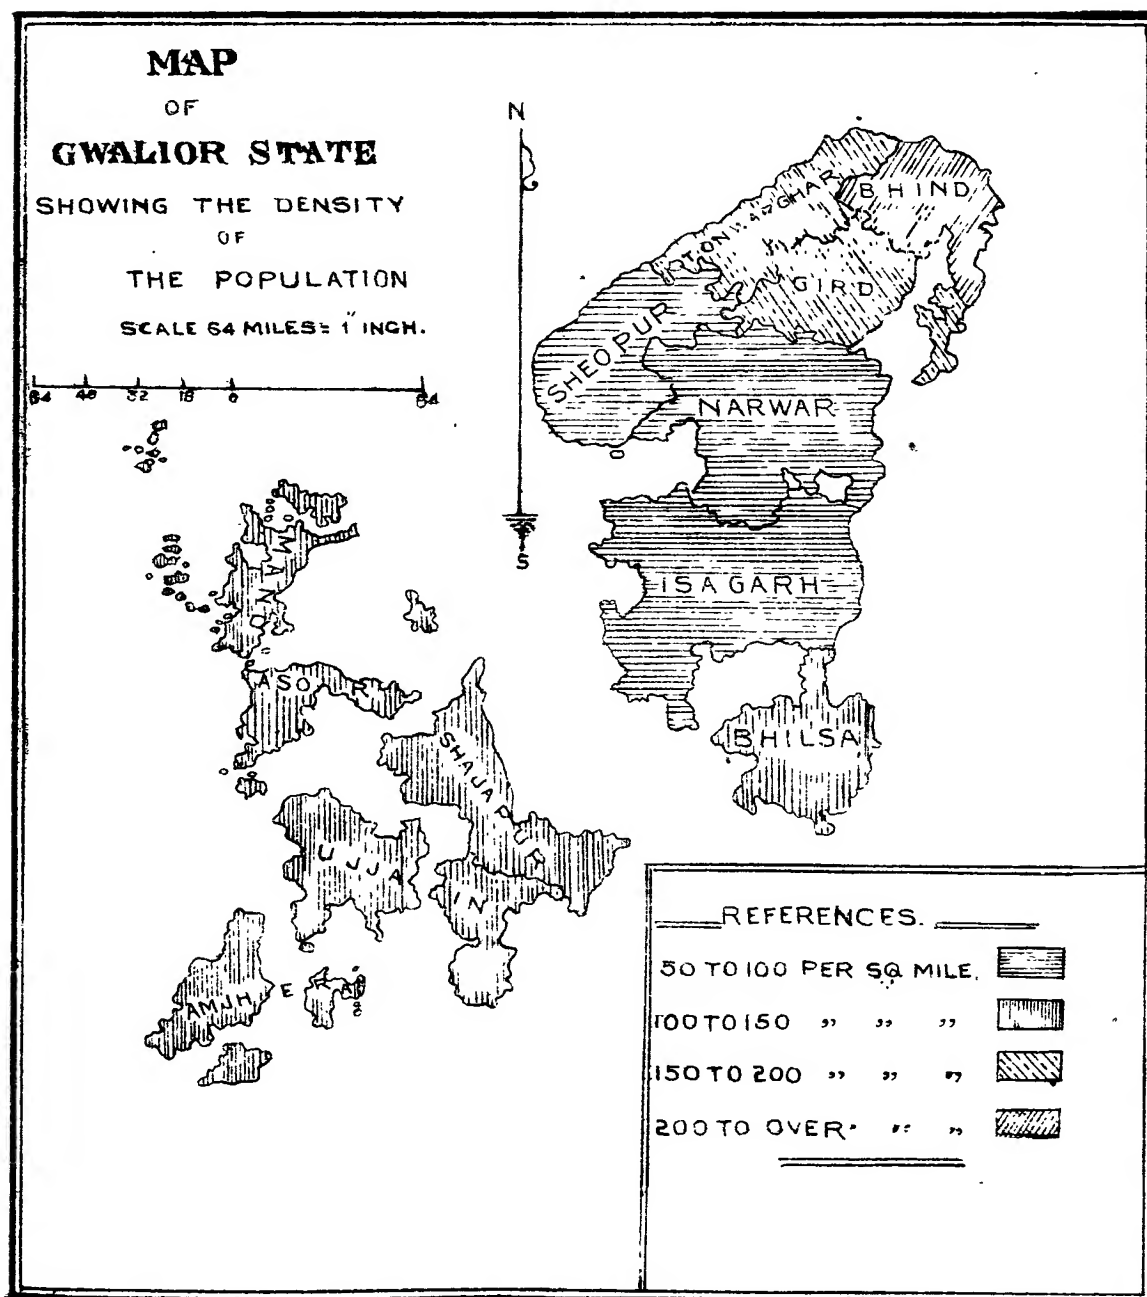

The Plateau has the largest area and population, the Lowlying portion has less area than the Plateau, but relatively a large population. The Hilly tract is the smallest in area and population.

The second diagram compares density of population of the districts of Gwalior with contiguous Provinces and Districts.

DIAGRAM SHOWING THE DENSITY OF POPULATION
IN THE STATE AND THE CONTIGUOUS

In point of density of population, Gwalior (121) compares fairly well with Central Provinces and Berar (122) and is better than Central India which has gone down from 122 to 116. Rajputana Agency shows 76 as against 82 in 1911. Baroda and Mysore are better off and show respectively 262 and 203 persons per square mile. But, by far the most favoured State is Cochin which claims, on an average, 662 persons to the square mile. The comparative low average density of Gwalior State is attributable to the existence of large Forest areas (4,456 square miles) and Hilly tracts in the State and also to the want of facilities for irrigation.

10. Of the natural divisions, the Lowlying has the greatest density (150) against (156) of 1911. Then follows the Plateau with (109) as against (110). The Hilly tract shows a rise from 92 in 1911 to 103. Excluding the urban population, the densities of the Lowlying and the Plateau portions are 131 and 100, respectively.

**Density by
Natural
Divisions.**

**By
Administrative
Divisions.**

11. Taking by Prants, Gwalior-Isagarh Prant has a density of 119 persons to the square mile and Malwa Prant 124, the latter above and the former below, the mean density of the State.

By Districts.

12. There are 11 districts in all. The average size and population of a district are 2,398 square miles and 290,498 persons, respectively. Of these, as in 1911, Bhind has yet the highest density (222), then comes Gird Gwalior (191) including Lashkar. If Lashkar were omitted the density of Gird would fall to 144. Tonwarghar takes the third place (168). In the Plateau, Mandasor has the highest density (134), next come Bhilsa (128) and Ujjain (125). If the population of Ujjain town were excluded from the district population, Shajapur would be ahead of Ujjain. Sheopur has, as in 1911, the least density (52) and Isagarh, which is the largest district in area (4,590 square miles) and population (384,088), has 83 persons to the square mile and is the last but one in the State in point of density, even the smallest hilly district, Amjhera, having higher density of population.

By Tahsils.

13. An average Tahsil has an area of 676 square miles and a population of 81,935 persons. Provincial Table I printed at the end of the Tables will show that, leaving out Gangapur (361), which is far away from the parent State and lies in Rajputana, Gird Gwalior (359) is first, Ambah (250) second, and Bhind (244) third in density of population. If Lashkar be left out of consideration, the density of Gird Gwalior (Pargana) would be only 182.

The case of Gangapur is unique and forms an exception. With an average rainfall of 13 inches and soil much inferior to that of the Plateau and the Lowlying area, it has the highest density* in the whole State as shown above.

**Density of
Cities.**

14. *Lashkar*.—The area of Lashkar not being definitely known, its density of population cannot be accurately given. Taking its area to be four miles, as in 1911, there are 20,097 persons to the square mile. This high density is the result of the compactness of its structure, its narrow streets and absence of open spaces. In some wards there is too much crowding which the "Town Improvement Trust" is now relieving. The central part has been already partly opened up and contains nice public resorts. The town is also expanding beyond the old Municipal limits.

Ujjain.—The second town in the State is Ujjain. Taking its area as 1'68 square miles, its density of population is found 26,136. This is also a crowded town which grew without any predetermined plan. It is now being improved and expanded.

It is no use comparing the present densities of Lashkar and Ujjain with their previous density-figures, for the areas are changing and are bound to change further in future years.

**Causes of
Variation in
Densities.**

15. We have seen that in spite of its superior soil and better climate, Plateau districts have less density than Bhind, Gwalior and Tonwarghar of the Lowlying plain. This, as has been explained in the Census Reports of 1901 and 1911, is due to the people availing themselves of the existing means of irrigation by *Kachcha-Pucca* wells in the Lowlying plain. Besides, Malwa was hit hard by the famine of 1899 and though steadily advancing, it has not yet been able to recover fully from the effect of the shock. There might be other causes of physical, social and racial nature. Malwa people

*Probably due to its being an important trade centre for Mewad.

getting easy competence do not, perhaps, irrigate any crops other than poppy and extend their cultivation beyond small patches of land close to their homestead. Past history of Malwa may also have its retarding influence on the growth of the population. This portion of Central India was, over a century, in a chaotic condition in the early part of the 19th Century due to Pindari depredations and thus came to a settled political condition later than the Plain area. But it is noteworthy that while the Lowlying area is proportionately decreasing in density since 1881, Malwa districts are generally gaining. It is expected that in future the people of Malwa will fully utilize all the natural advantages and artificial incentives now offered by the Darbar* and show better growth.

Subsidiary Table II which classifies the population by density shows that 5·4 per cent. of the total population of Gwalior State are congregated in 1·8 per cent. of the whole area having density of population between 300 and 450 (Gird Gwalior Pargana), 31·9 per cent. live in 19·8 per cent. of the whole area having density between 150 and 300 and 62·7 per cent. in 78·4 per cent. of the area having a density under 150. It is only in Bhind District that the population is almost uniform, all the Parganas being in the same density group 150 to 300.

Movement of Population.

16. So far I have dealt with the population and its distribution as it stood on the 18th of March 1921. I shall now discuss its variations and endeavour to account for them, as is possible, without the help of vital statistics.

17. Between 1881 and 1891, the population of Gwalior on the area of the then State proper increased by 12·8 per cent., on the previous population. During the decade ending in 1901, the population decreased by 13·1 per cent. This was due to a severe famine which visited the Plateau in particular. The actual population in 1901 was 3,073,547 which after due adjustment for the increased area comes to 3,075,041. During the decade 1901-1911, there was an increase of 5·3 per cent. In the present intercensal decade the population has gone down by 41,682 or 1·3 per cent. Thus, in 20 years from 1901, due to epidemics of plague and influenza, the population has increased only by 4 per cent. which is far below the normal growth.

**Variation
since 1881**

18. Enumerations since 1901 can be taken as accurate and adjustment of population on the additional area has also been made since 1901. The only other important cause of variation of population is the natural increase or decrease. Increase between 1901 and 1911 has been dealt with in the Census Report of 1911. I shall, therefore, confine my discussion to the causes that have brought about the fall of 1·3 per cent. in the population of Gwalior in the last decade, so far as is possible, in the absence of vital statistics.

19. The condition of the decade, as given below in brief, will reveal that besides the influenza epidemic, the cause of decrease was a majority of 'lean years' during the period under review :—

**Condition of
the Last
Decade.**

1910-11 —A normal year of harvests.

*Land has been leased out on easy terms and scientific agriculture introduced by way of experiment in all districts

1911-12—Belated monsoon greatly reduced the yield of *Kharif* crops. There was also a great mortality due to plague.

1912-13—A good year.

1913-14—Drought and scarcity prevailed in the Northern Prant. Large quantities of *Jowar* were exported from Malwa which was somewhat in a better condition.

1914-15—A good year.

1915-16—Rainfall was ill-distributed and scanty, and the yield of crops was below average.

1916-17 and 1917-18—The two years gave fairly good harvests.

1918-19—This was an exceptionally bad year. Though famine was not officially declared, relief measures were adopted to mitigate the calamities of the people. Influenza epidemic played havoc throughout the State. There was a total failure of *Kharif* crops in the Northern Prant.

1919-20—A year below average.

Lowlying area
more affected
than the
Plateau.

20. Undoubtedly, each part of the State was more or less affected by

	1911-1921
Lowlying ...	- 3.9
Plateau ...	- .3
Hilly ...	+ 8.5

the hard condition of the decade described above. But the distressing economic conditions told more heavily upon the Lowlying than upon the Plateau and the Hilly tracts. The latter, taken separately,

shows an increase of 8.5.

There are some districts in which the increase is considerable. These have some natural advantages which are not shared by others. Thus, Bhilsa which shows the greatest increase, contains first class black cotton soil and is the tempting ground for agriculturists. Bhilsa was always a very populous and prosperous district. It was seriously affected by the famine of 1901, after which it has been steadily making up the lost ground. Since 1911 its cultivated area has increased from 29 to 41 per cent. and double-cropped area from 2 to 10 per cent. Rainfall also has been reported to be better. Production of wheat and gram in the pre-war and post-war periods bettered the economic conditions of the inhabitants.

In Amjhera about 50 per cent. of the population are Animists whose number has immensely increased during the decade throughout the State. The Bhil is a primitive man and his wants are few. He is seldom seriously affected by the economic strain obtaining outside.

Mandasor shows only .3 per cent. increase and does not require any detailed consideration.

With the exception of the three districts noted above, all others show decrease more or less. The increase (4.5) shown against Gird Gwalior is due to inclusion in it of Lashkar City, increase of which is partly due to the

return of its former inhabitants after the Plague of 1911. It may also be due to the immigration of labourers working in connection with the Irrigation Scheme Dams.

21. The natural population* of the State which has decreased by 1·9 per cent. or '6 per cent. more than actual population, indicates that there has been an excess of immigrants over emigrants during the decade.

**Natural
Population.**

22. Considering the physical and economical conditions of the decade

Provinces and States.	POPULATION.		VARIATION.	
	1921	1911	Actual.	Per cent.
Gwalior State ...	3,195,476	3,237,158	—41,682	—1·3
Central India ...	5,997,023	6,129,019	—131,996	—2·2

U. P. ...	45,375,787	46,807,490	—5,431,703	—3·1

it is somewhat a matter of consolation that our population did not show a still greater decrease. The marginal Table will compare the rise or fall of population during the intercensal decade of Gwalior with some adjoining

**Decrease
compared with
other Provinces
and States
of India.**

Provinces, States and Districts.

23. Long ages will pass before the land will yield less crops than are required for the children of the soil. Both the Lowlying area and the Plateau are capable of supporting more souls than at present. The extensive natural resources of the State have, so far, been very little developed. The increase in the proportion of agricultural population to total population from 60 in the last Census to 66 in the present shows that more persons are taking to cultivation with the advance of years. If the problem of artificial supply of water (for which big schemes have been started) be solved there will be room for more people to settle in the State.

Conclusion.

Houses and Families.

24. The number of occupied houses in the State has increased, the greatest increase being noticed in the Lowlying section which shows 33 as against 31 houses per square mile in 1911. In the Plateau there is no change but the Hilly tract returns one more house per square mile than in 1911. From the census definition of a house which is the dwelling place of a commensal family (*i. e.*, a family eating together of food cooked on a common *chulha*), the number of families must be equal to the number of occupied houses. On this assumption the number of persons living in a family on an average are 4 this time, as against 5 in 1911 and 1901. This reduction of members in an average family does not necessarily point to any change in the joint-family system during the decade; it is probably due to the decrease in population.

25. Joint-family system is more in vogue among the land-owning than among the labouring classes. It is showing a tendency to break up under the modern economic conditions.

**Breaking up
of Joint-family
System.**

* Actual population plus emigrants and minus immigrants.

CHAPTER II.

The Population of Cities, Towns and Villages.

26. Tables III, IV and V give the statistics required for this Chapter. The principal statistics exhibiting the distribution of the population over towns and villages are to be found in Subsidiary Table I appended to it.

Reference to
Statistics.

27. In the State, 97 per thousand of the population reside in towns and the remainder in villages. Of the town population, 469 per thousand or nearly one half, live in the city or large towns of over 20,000, about $\frac{1}{4}$ th in towns of 10,000 to 20,000, nearly $\frac{1}{4}$ th in small towns of 5,000 to 10,000 and more than $\frac{1}{4}$ th in places under 5,000 reckoned for census purposes as towns. The State is for the most part agricultural. Few urban characteristics are visible even in towns of comparatively big size. The small towns, so to speak, are over-grown villages.

General
Remarks.

28. The definition of a town included all Municipalities, British Cantonments or British Military Stations and every other continuous collection of houses inhabited either by 5,000 persons upwards or less than 5,000 having urban characteristics.

Definition of
a Town.

There are, according to this definition, 27 towns in all, of which Guna and Agar are the two British Military Stations and Nimuch, a British Cantonment. Lashkar Brigade, where the State Forces are stationed, has, this time, been included in the Lashkar City, as a result of which, the number of towns has been reduced by 1 in the present Census from that of 1911. The State Cantonment of Morar and the Residency Headquarters there, have also been thrown into the Morar Town. Some eight places, though the population of each is less than 5,000, have been treated as towns on account of their urban characteristics as compared with other places of purely rural nature.

29. There is no town in the Hilly tract of the State. The number of towns is greater in the Plateau portion than in the Lowlying, but from Subsidiary Table II, it is evident that the proportion of urban population is greater in the Lowlying than in the Plateau, the number returned per mille residing in towns being 129 in the Lowlying and 83 only in the Plateau section.

Urban and
Rural
Population by
Natural
Division.

DIAGRAM SHOWING THE TOTAL URBAN & RURAL
POPULATION OF THE GWALIOR STATE IN THE DIFFERENT DISTRICTS

**Urban
Population
compared
with 1911.**

30. The urban population returned at this Census shows an increase of 30,290 or nearly 11 per cent. from 1911, but no effective comparison is possible with the figures of that Census, as large towns such as Lashkar, Ujjain, Morar, etc., were mostly evacuated on account of plague at that time. If the figures of recount, done in the city of Lashkar alone, be taken into consideration, the increase is only of 14,068 or nearly 7 per cent. But the recount figures are not safe to compare with, for they were taken at a different session, nearly four months after the general Census.

**Compared
with 1901.**

31. Comparing the present urban population with that of 1901, the figure shows a decrease, though the general population has increased from the Census of 1901. This is due largely to the ravage done by the plague of 1911, since which calamity the city of Lashkar has never been able to recoup the loss, and also to a greater extent to the influenza epidemic of 1918. As the figures for vital statistics are not available, it is impossible to estimate the loss due to plague and influenza separately. The figure of the 'Informal Census' taken by the order of the Darbar in the latter part of 1917, only in the area within the Lashkar Municipality, showed an increase of 30,589 souls in the Municipality alone, excluding Lashkar Brigade, over the actual figure of 1911 and 16,620 over that of recount. Thus, when Lashkar was steadily regaining her original strength, the influenza epidemic, which broke out in the latter part of 1918, swept away thousands reducing the number of people in the city.

**Big and Small
Towns.**

32. But the plague and the influenza epidemics though ascribed as the main cause of decrease in Lashkar and to have arrested the growth of Ujjain and Morar, are not solely responsible for the decrease in the total urban population of the State. Big towns, in spite of being affected by the past adverse circumstances, do not show any tendency to decrease as small towns do. The population of Ujjain is greater in the present Census than that in any of the previous decades. Morar, in spite of its falling a victim to plague and influenza, has kept ground, and Lashkar, though showing a decrease from the figures of 1901 and 1891, has prospects of increase under the ægis of the present Ruler. But other old towns, such as Mandasor, Gwalior, Gohad, Chanderi, Nimuch are declining as has also been observed by Col. Luard in his Central India Report of 1911. The reason is that the stimulus of industrial and commercial activity which can only give life and strength to modern towns, is wanting in many of them.

**Growth of some
Small Towns.
Morena.**

33. This is borne out by the fact that Morena is growing rapidly to be a town of importance from a small village, due to the facilities it possesses for export and import in grains in which it conducts trade with outside. Compared to its small population, its urban characteristics are great. The town of Bhind is also an instance in point. Bhind being a trade centre, its population is increasing. The increase of Shivpuri (Sipri) is due to its being made the summer residence of His Highness and the transfer of the headquarters of the Narwar District from Narwar to Shivpuri.

Bhind.

Shivpuri.

**Urban
Population
by Religion.**

34. In the towns, though the number of Hindus is greater than that of Musalmans and persons of other religions, the proportion of Musalmans and Jains is higher than that of Hindus. More than $\frac{1}{3}$ rd of Musalman population lives in towns. Almost all the Christians in the State are also to be found in towns. The number of Animists in urban areas is very insignificant. Males invariably predominate over females. In the case of Parsis,

nearly $\frac{2}{3}$ ths of whose total population reside in towns, females are in excess of males.

35. Lashkar, with its factories, hotels, new industrial concerns, banks, and trade quarter at Sarrafa, presents ample urban features which are hardly to be found anywhere else in the State. It has grown from a small place where Scindia's moving camp was located, to the foremost place in the State. In 1901 its population was more than one hundred thousand and so in the previous decades of 1891 and 1881, when there could be no difficulty in naming it a city even according to the census phraseology. But from 1911 its population has fallen short of one hundred thousand owing to causes previously stated. Its population including the Lashkar Brigade, at the present Census, is 80,387 which falls short of the standard of a city by about 20 thousand souls. But, for census purposes, it has been treated as a city. It shows unerring signs of progress in future and it is hoped that at the next census its population will exceed the census standard. Subsidiary Table II shows that its density per square mile is 20,098, a figure certainly much higher than that of equally populous cities like Baroda and others and nearly equal to one of the most densely populated cities of the United Provinces, *viz.*, Benares. Like Benares, the buildings of Lashkar are close, compact and generally of more than one storey. As the chief town in the State and the headquarters of local administration there is concentration of population of all kinds in it. The demand for labour in connection with the factories and extensive building projects attracts a large concourse of workers both skilled and unskilled. More than 26 per cent. or $\frac{1}{4}$ th of the urban population is returned from Lashkar City alone.

City of Lashkar

36. Ujjain, the second town, contributes $\frac{1}{8}$ th. It is steadily rising and epidemics have not been able to impair its growth. Urban features are becoming prominent in Ujjain owing to the recent establishment of several Cotton Weaving Mills and other Factories. It has also a high density.

Ujjain.

Villages.

37. As in the previous census, revenue *mauza* has been taken to be a village for census purposes in the State. A village list has been prepared in the office from the 'A Register' of the Sorting Supervisors. It is thus an up-to-date collection and cancels the previous lists supposed to be rather inaccurate.

Village Register.

38. The hamlets grown by the side of a village have been taken into the parent village. The villages of the State, as has already been described in the report of the last Census, are a compact collection of houses, with cultivable lands surrounding them. The residence of the landlord or a large tenant generally comes in the middle round which cluster the houses of others; on the outskirts close to the field are the huts of cultivators and beyond, at a little distance, of the low castes. For Bhil villages in the jungles, the system is different. These villages cover an extensive area, the leafy huts of Bhils and Saharias being built at long distances apart.

The Village.

39. Including the Feudatory Estates, the total number of villages was 10,432 in 1911. The number at the present Census has increased by 112. The villages with population under 500 predominate this time also, as in the previous decade. Of 10,544 villages, 9,171 have population under 500. The conclusion therefore is, that the State lives in small villages.

Number of Villages.

There are more villages in the Plateau than in the Lowlying area. But large villages, *i. e.*, villages with population of over 500 predominate in the Lowlying (Subsidiary Table I). In the Hilly tract there are very few large villages; out of 573 villages in all, there are only 62 with a population of over 500, the rest are under 500.

40. The average population per village amounts to 274 in the State. On the Plateau it is 240, while in the Lowlying and Hilly tracts it is 349 and 237, respectively.

Average Population.

41. The average distance of villages apart is 1·7 miles, for the State as a whole; in the Lowlying tract it is 1·8, in the Plateau region 1·7 and in the Hilly 1·6.

Average Distance between Villages.

CHAPTER III.

Birthplace.

Immigration.

42. The Table dealt with in this Chapter is Table XI recording the birthplaces of those enumerated. At the end of the Chapter, there are some Subsidiary Tables dealing with the subject. Table XI will show that out of the total population of the State (3,195,476), 2,902,067 persons, or about 91 per cent. were born within the State limits and 293,409, or 9 per cent. were born in other Provinces and States in India or in countries beyond India.

Gwalior and Foreign Countries.

43. The figures for those born beyond India are very insignificant and of very little interest for Gwalior, situated as it is, far from the outer frontiers of British India. Of the 683 persons so born, 571 were born in Europe, 71 in other Asiatic countries, of whom 44 were Afghans, for the most part, in military employ, and the remaining 41 in different continents of the world.

Immigration in Detail.

44. Omitting the negligible number of persons born in foreign countries, 292,726 persons may be taken as immigrants into the State. The number of such immigrants in 1911 was 261,123, so, there is an increase of 31,603 persons or about '9 per cent. of the total population, on the present occasion. The Census of 1911 was preceded by an exodus to other contiguous territories on account of plague, especially from the city of Lashkar and other big towns. This temporary movement was more than counter-balanced by the re-settling of the temporary emigrants as soon as the plague had subsided and 'the periodic migration' of a good number of persons from the Punjab, working as agriculturists in Bhilsa and other places, later on.

Proportion of Sexes among Immigrants.

45. The proportion of sexes among immigrants from contiguous parts of other Provinces or States is 148 females to 100 males. Among those returned as born in non-contiguous parts of other Provinces and States the proportion is 80 females to 100 males. The relatively high proportion of females in the case of contiguous districts is due to marriage which usually means, for a woman, a move to a new home in another village and is known as 'Casual migration.'

Immigration from the States of Central India.

46. Of the total number of immigrants from contiguous foreign districts, 137,917, or 63 per cent. were born in the Central India States. The percentage is 47, when the total number of immigrants is taken into account, irrespective of contiguity or distance.

Immigration from the Contiguous Parts of other States and Provinces.

47. Ninety-three per cent. of the total immigrants to Gwalior come from contiguous territories. The intermingling of the boundaries of the districts of the Malwa Prant, accounts for this. In Northern Gwalior or Gwalior Isagarh Prant, which is a compact area of well-defined borders, the number of immigrants from outlying Provinces is not comparatively so high as it is in Malwa, where

territories of other States of Central India intervene between our districts and even within one and the same district as in Mandasor. In the detached Pargana, Gangapur, which lies far off in Mewar, several Rajputana States jut in. From these places the number is enormous. Throughout the districts of both Prants females are in excess of males leading to the conclusion that the immigration is casual, due to the custom of bringing a wife from another village.

Next to Central India States, Rajputana sends the greatest number of people, of the contiguous foreign districts. The number of persons, born in Rajputana but enumerated in the State, is a little above 78,000. The migration, in the case of Marwaris who generally come here for trade, is 'Semi-permanent.' In Northern Gwalior, Rajput Thakurs marry girls of the bordering States of Rajputana and bring them here.

Rajputana.

Then comes the United Provinces, which sends more than 59,000. People of the United Provinces generally migrate to Northern Gwalior.

United Provinces of Agra and Oudh.

Most of the immigrants from Central Provinces and Berar come to Northern Gwalior for service, and hence the movement is generally of semi-permanent nature. But some of them, afterwards, settle and become permanent residents.

Central Provinces and Berar.

48. As has already been stated, only 7 per cent. of the total immigrants come from distant provinces. Of these, Bombay Presidency and the Punjab give the major part. In the Gird Gwalior District, males outnumber females, but in the Hilly tract and Mandasor reverse is the case. This suggests that in Gird the immigrants come for trade or service, while the Bhils and kindred tribes of Amjhera and Marwaris of Mandasor get wives from distance.

Immigrants from Non-contiguous Parts of other States and Provinces.

49. Subsidiary Table III shows the actual figures of inter-migration of the present Census and compares them with those of 1911.

Intermigration between the Districts of the State.

In the Lowlying area, out of every 100 persons born within its limits and residing in the State, 94 are found to reside there and nearly 6 in the Plateau; in 1911, the proportion of such persons in the Plateau was 11. From the Plateau, very few of the home-born come to the Lowlying, only a few thousands have been found to have moved to the Lowlying. In the Hilly district of Amjhera, there is practically no migration. Thus whatever movement there is within the State, it is in the Lowlying area.

50. The total number of persons born in Gwalior but enumerated outside in other Provinces and States in India, is detailed in Subsidiary Table IV. In addition to these emigrants, there is also a handful of persons who migrate to countries beyond India, but their number is so small that it deserves no consideration.

Emigration.

51. Though there is interchange of population between the State and all other parts of India more or less, it is confined mainly within a few Provinces. It occurs prominently with the following Provinces and States, *viz.*, (1) Central India States, (2) Rajputana States, (3) United Provinces, (4) Central Provinces and Berar, (5) Bombay Presidency, (6) The Punjab, including Delhi, (7) Bengal and (8) Bihar and Orissa.

Migration between Gwalior State and the other Provinces and States of India.

The marginal Table shows the figures. In return for the 47 per cent.

Provinces or States.	Gives to Gwalior.	Receives from Gwalior	Gain (+) or Loss (-) to Gwalior.
1. Central India States.	137,917	174,753	- 36,836
2. Rajputana States ...	78,063	54,115	+ 23,948
3. United Provinces ...	59,020	47,695	+ 11,325
4. C. P. and Berar ...	8,073	2,519	+ 5,554
5. Bombay Presidency,	3,833	1,608	+ 2,225
6. The Punjab including Delhi.	2,548	1,799	+ 749
7. Bengal ...	325	1,752	-1,427
8. Bihar and Orissa ...	95	1,320	-1,225

of its immigrant population which the State receives from the Central India States, it gives 60 per cent. of its emigrant population. The net outcome of this interchange of population is a loss to the State of 36,836 persons. As in immigration, so in emigration, the greatest amount of migration is to or from the Central India States. Rajputana followed the Central India States in

importance, sending 78,063 or nearly 27 per cent. receiving in return 54,115 or nearly 9 per cent. of the emigrants from the State. It is due to marriage transactions taking place among Rajputs, and Marwaris of Rajputana and of the State.

United Provinces comes next, sending 20 per cent. of the immigrant population and receiving only 16 per cent. of the emigrant children of the State. The nature of migration of the United Provinces is, for the most part, of semi-permanent nature.

Then follow Central Provinces and Berar in order of importance in point of migration. Here also there is a favourable balance for the State, Central Provinces and Berar sending 8,000 in round number, while receiving 2,000 only instead. Most of the emigrants from Central Provinces and Berar come from Saugor. Of all other Provinces with which interchange of people prominently takes place, Gwalior has an adverse balance in the case of Bihar and Orissa, and Bengal. Many of the people from the District of Bhind go to Calcutta for trade and in quest of employment.

Of the minor figures of migration, the State sends coolies to Assam Tea Gardens, and receives agriculturists from the Punjab and men from various parts of India who come generally for service.

Conclusion.

52. The year 1911 being an unusual year of plague epidemic, there was more emigration from the State than immigration. At this Census, there has been an excess of immigration over emigration. With the merging of the 37 Guaranteed Estates into the parent State of Gwalior, whose Census figures have been taken into consideration this time but were left out of account in the last Census, comparison of migration figures may apparently seem to be impossible. But the inclusion of Feudatories has not affected the figures much as migration seldom takes place in the feudatories, most of them being benighted places without means of communication. Education, which encourages the volume of migration, is nearly absent from these estates.

DIAGRAM SHOWING THE MIGRATION BETWEEN GWALIOR AND SOME OTHER PROVINCES AND AGENCIES.

CHAPTER IV.
Religion.

53. In the present Census it is not required to enter into any discussion of the history or philosophy of any religion or record the rituals, ceremonies, practices, and superstitions of its followers except when it becomes necessary to throw light on the figures under each religion and explain how far they are accurate or complete and have definite meaning and what are the factors that determine their variation.

Introductory.

54. The statistics of religion are given in Tables VI, XV, XVI, and the following Subsidiary Tables at the end of the Chapter :—

Reference to Statistics.

Subsidiary Table I.—General distribution of the people by religion.

Subsidiary Table II.—Distribution by districts of the main religions.

Subsidiary Table III.—Christians—Number and variations.

Subsidiary Table IV.—Religions of Urban and Rural population.

55. Altogether nine religions—Hindu, Muhammadan, Jain, Animist, Parsi, Christian, Arya, Jew, Sikh—have been returned in the State. Sects, except those of Christians, have not been recorded.

56. The relative strength of the whole population by religion is given in

Distribution and Variation by Religion.

Religion.	1921	1911	Variation.
Hindu	2,813,958	2,945,677	-4·5
Musalman	177,417	177,749	-·2
Jain	39,394	40,462	-2·6
Animist	161,973	70,269	+130·5
Christian	1,650	1,685	-2·7
Others	1,084	911	+19·9

the in-set table for the past two Censuses with variations during the decade. The Hindus preponderate in the State forming 88·06 per cent, of the total population. Then follow, but very much below in number, the Musalman, being 5·55 per cent. of the total population. Animists

come next in order showing 5·07 per cent. of population. Jains represent 1·23 per cent.; other religions form insignificant minorities in the State and do not require any special mention.

DISTRIBUTION OF POPULATION
BY RELIGIONS.

57. One striking feature of the figures showing religious distribution of the State is that while the general population has gone down by 1·3, the Animists have increased by the high percentage of 130·5. Followers of minor religions, such as Arya Samajists, Parsis, Jews grouped as "others," show an increase

Animists.

of 19 per cent. Hindus, Musalmans, Jains and Christians have all gone down as shown in the in-set table, the largest decline 4·5 being shown against Hindus.

58. The word 'Animist' is one of foreign origin. It is used to express the various forms of religious beliefs and superstitions of the aboriginal tribes of India, such as Gonds, Bhils, Bhilalas, Korkus, etc., who have not yet regularly adopted or have not been admitted into Hinduism, Muhammadanism, Christianity or any other well known creed. It is very difficult to distinguish between an Animist and a low class Hindu, belonging to Koli or Chamar caste, for instance. Both believe in spirits, ghosts, witch-craft, and the evil-eye and their propitiation to secure happiness or avoid misery is common to both. An Animist, living in towns or otherwise coming under civilizing influences is gradually drawn towards and absorbed into the broad pale of Hinduism. It is impossible to determine at what stage a tribal man should be called a Hindu and at what, an Animist. The border line is faint and shifting and the accuracy of the return of their religion depends on the personal equation of the enumerators and supervisors.

59. When the Schedule, passing through the Enumerator's hand, comes for classification in the Abstraction office there are again chances of error due to carelessness, over-caution, or mis-reading of the instructions. The returns of Animists, therefore, have always been and will long remain open to doubt. The variations in their strength are not real and are caused by differences in the mode of enumeration and classification.

60. The Animist population of Gwalior was 404,289 in 1891 and 222,336 in 1901*. In 1911 it fell to 59,899. This would show that the Animistic population decreased considerably while other castes who are known to be less prolific all increased more or less during the decade 1901-1911—an inference which must be dismissed as highly improbable. The only explanation is, that most of the Animists were returned or classed as Hindus. To avoid such errors, care was taken in the Abstraction office to prepare a list of the tribes who should be regarded as Animists or Hindus. The basis of their classification was local experience and current opinion.

It is just possible that as a result of this precautionary step, many persons, who would have otherwise been grouped as Hindus, have come to the category of Animists and thus swollen their figures. The increase of 130·5 per cent. of the Animists is, therefore, only apparent and attributable to the low figure of 1911 and the inclusion of some people in 1921 who would otherwise have been classed as Hindus. This would partly account for the drop of 4·5 of the Hindu population as compared with lower decrease of adherents of other religions.

61. The total number of wild tribes belonging to the Hindu and Animistic groups for 1911 and 1921 is shown below :—

	1911		1921	
	Animists.	Hindus.	Animists.	Hindus.
Total ...	59,899	173,873	161,973	132,109
Bhil ...	42,821	10,478	68,832	2,463
Bhilala ...	1,563	26,482
Bharud	22,819	211
Gond ...	1,095	210	3,457	533
Kirar ...	765	50,975	66,877
Mina ...	582	46,943	5,176	60,128
Saharia ...	12,980	42,448	56,483	1,897
Others ...	93	1,543

	1911.	1921.
Total Animists and Hindus ...	233,772	294,092
Add Animists of Feudatory Estates ...	9,844

GRAND TOTAL ... 243,616 294,092

Difference 294,092 - 243,616 = 50,476 or 20·7 per cent.

*These figures are exclusive of British Cantonments and Feudatory Estates.

So the wild tribes, irrespective of whether they are called Hindus or Animists, have increased by about 21 per cent.—not a very abnormal rise, considering their high fertility.

62. Of the total number of Animists, 76,295 live in the Plateau and 66,071 in the Hilly tract and 19,607 in the Lowlying plain.

**Distribution of
Animists by
Natural
Divisions.
By Districts.**

63. Amjhera in the Hilly tract and Isagarh in the Plateau contain respectively 66,071 and 24,196. In the former the Animists form a little more than half the population of the district. Consequently the high increase of the Animists has raised the district population to 8·5 while the State, on the whole, has gone down by 1·3 per cent.

64. The Hindus, as has been shown already, form pre-eminently the major portion of the whole population of Gwalior State as in Central India. Their ratio in 1921 is 88·06 per cent. as against 91·45 per cent. of 1911 and is slightly more than that of Central India (86·88 per cent.).

Hindus.

Their distribution by natural divisions is 92·35, 88·45 and 45·39 per cent. in the Lowlying, Plateau and Hilly tracts.

They do not keep up the same numerical superiority in towns where Musalmans and Jains show comparatively high ratios, both being dwellers of towns from the nature of their profession and service. Ninety-two per cent. of the Hindus live in villages as against 60 per cent. of the Musalmans.

Hindus have decreased by 4·5 per cent., more than the entire population of the State and other communities. The main causes of this decrease are, as stated in Chapter I, influenza, high prices, and their consequent diminished vitality during the decade under review.

There has been no defection from Hinduism in the State on account of conversion to Muhammadanism or Christianity, rather there is a possibility of accretion to it due to slow and gradual absorption of Animists into its fold though this year's return shows otherwise.

65. It is not difficult to differentiate Hindus from Jains and Sikhs in the State. For census purposes, a Hindu in Gwalior State is one born of Hindu parents in or out of India and not doing anything revolting to Hindu ideas and sentiments such as cow-killing or insulting Hindu gods and goddesses and who does not avowedly return himself as Animist. The return includes the highest Brahman boasting of Aryan-blood and professing Vedic religion and the lowest sweeper whose religious attitude approximates to that of Animists. This is the only class in this State which is not served by Brahman priests. The other two castes just above the sweepers, Kolis and Chamars, receive ministrations from some Brahmans. Pollution by proximity is unknown in the State, that by touch generally applies to the Mehtars (sweepers).

**Accuracy of
Return of
Hindus.**

66. In 1911, the number of Aryas in Gwalior was 37 persons, 26 males and 11 females. This time they are 157 strong, consisting of 96 males and 61 females. The number probably is below the truth, for some Aryas prefer to return them as Hindus.

Aryas.

They are mostly found in Gird Gwalior and Bhind Districts.

There was one case of reconversion by *shuddhi* ceremony of a Bengali Hindu some years ago from Christianity to Hinduism under the auspices of Lashkar Arya Samaj.

Sikhs.

67. The Sikhs have increased from 554 in 1911 to 661 made up of 419 males and 242 females. The disproportion of the male and female figures may be due to most of them being temporary sojourners in the country coming for service and agricultural occupations leaving their women in the Province of their birth.

Jains.

68. The Jains form 1·23 of the entire population as against 1·25 of 1911; 75·3 per cent. of the Jains live in rural areas and the remaining 24·7 in towns. They have this time decreased by 2·5 per cent. as against 29 per cent. in 1911. So, while the Hindus have gone down from 13·6 per cent. increase in 1911 to 4·5 per cent. decrease, the Jains have risen from 29 per cent. decrease of 1911 to 2·5 only. This comparative increase may, to a small extent, represent their natural growth due to less economic pressure on their community but is also owing to their return to towns after the Plague in 1911.

By Natural Division.

69. Of the entire Jain population, 27 per cent. live in the Lowlying area, 68 in the Plateau and 5 in the Hilly tract.

By Districts.

70. Examination of district figures show that the largest number of Jains (7,756) live in Mandasor, the next number (6,288) in Bhind, these two towns being important trade centres.

71. As an effect of educational and social propaganda very few Jains, especially of the younger generation, return their religion as Hinduism though some of them declare that they are Hindus by caste.

Muhammadans.

72. The total number of Muhammadans in the State is 177,417 being 5·55 per cent. of the whole population as against 5·47 of 1911; they stand next to Hindus.

Distribution by Natural Divisions and Districts.

73. Of the Muhammadans, 33 per cent. live in the Lowlying area, 64 in the Plateau and 3 in the Hilly tract.

They mostly live in towns. Of every five Muhammadans two live in towns and three in villages.

They form 10·3 per cent. of the population of Gird Gwalior District, 9·52 per cent. of Ujjain and 8·83 of Mandasor.

From the marginal table it would appear that in the State proper the

Religion.	Population excluding Feudatories and British Cant.		Variation.
	1921	1911	
1. Hindu ...	2,719,067	2,836,866	- 4·2
2. Musalman ...	167,654	165,894	+ 1·06
3. Jain ...	37,850	38,372	- 1·4

Musalman have, instead of decreasing, increased by 1·06 per cent. while the Hindus decreased by 4·2 per cent.

This comparative high growth of the Musalmans, as a community, is supposed to be due to their higher fecundity and some social advantages they possess over the Hindus, such as comparative absence of early marriage and prevalence of widow re-marriage. Other circumstances remaining the same, Muhammadans ought to increase more than the Hindus, as they do in other parts of India; and the same is noticed this time in Gwalior.

Another reason of their comparative rise in 1921 is perhaps their return to towns after the disappearance of the Plague of 1911, when their number fell considerably more than Hindus.

74. Inset Table on page 23 shows that the Christian population has fallen slightly from 1,685 to 1,650, *i. e.*, 2·7 per cent. in the whole State including British Cantonments and Feudatory Estates. Excluding these, the Christians would show a rise of 170·5 per cent. The fall of Christian population, therefore, has taken place in the British Cantonments, Railway Stations, etc. This is due to reduced garrison of British troops stationed at Nimuch, Agar and Guna. In the State proper there has been a rise.

Christians.

75. There are 629 Europeans (males 547, females 82), 261 Anglo-Indians (males 140, females 121) and 760 Indian-Christians (371 males, 389 females).

Races and Sects.

In numerical strength, Indian Christians are first, then come Europeans and last Anglo-Indians.

Amongst Europeans, males far out-number females, being respectively 547 and 82, as has been said above. This great disproportion is due to most of the Europeans being soldiers in the army in the British Cantonments of Nimuch and Guna.

76. Information about sects was obtained through the heads of Missions by distribution of cards, and may therefore be taken as correct. The sects returned in Gwalior are:--

Accuracy of Return.

Sect.	PROPORTION PER MILLE OF EACH SECT PER RACE.			PROPORTION PER MILLE OF EACH RACE PER SECT.			TOTAL.
	Europeans.	Anglo-Indians.	Indian-Christians.	Europeans.	Anglo-Indians.	Indian Christians.	
1	2	3	4	5	6	7	8
Anglican ...	782	149	69	833	383	61	406
Roman Catholics ...	147	236	617	107	414	371	277
Presbyterian ...	27	30	943	14	38	416	203
Other Sects	46	165	152	114
TOTAL ...	381	158	461	1,000	1,000	1,000	1,000

The largest sect of Christians are Anglicans amongst Europeans, Roman Catholics amongst Anglo-Indians and Presbyterians amongst Indian Christians.

The preponderance of Presbyterians is due to the efforts of Canadian Presbyterian Mission in the State.

77. From the report of the different Missions, it appears that there have been 48 cases of conversion to Christianity, 44 from Ujjain and 4 from Nimuch, during the decade in question. Thirty-three of these converts were Balais, four Muhammadans and five Bhamis.

Conversions.

78. Canadian Presbyterian Mission, Ujjain, supports one Boys' School and one Hospital there. In addition to these, the local Mission (American Presbyterian) has recently started at Lashkar an Anglo-Vernacular Girls' School which is fairly well attended by girls of respectable and high class families,

Educational Activity.

CHAPTER V.

Age.

79. The statistics of age are given for the State as a whole and for the districts in Table VII and for some selected castes in Table XIV. At the end of the Chapter are appended the following Subsidiary Tables:—

Reference to
Statistics.

1. Age distribution of a population of 103,500 males and 103,000 females by annual age periods.
2. Age distribution of 10,000 of each sex in the State and each Natural Division.
3. Age distribution of 10,000 of each sex in each main religion.
4. Age distribution of 1,000 of each sex in certain castes.
 - 4—A. Proportion of children under 12 and of persons over 40 to those aged 15-40 in certain castes, also of married females aged 15-40 per 1,000 females.
5. Proportion of children under 10 and of persons under 60 to those aged 15-40, also of married females aged 15-40 per 100 females.
6. Variation in population at certain age periods.

For want of vital statistics, 4 more Subsidiary Tables could not be prepared. The figures in Subsidiary Table I refer to Hindu and Musalman population of Bhilsa District with its Feudatory Estates, Bhilsa being taken as a type for its geographical and other considerations.

80. Of all census statistics those relating to age are most unreliable. Even in countries like England, where the system of registration of births and deaths is compulsory and the people are expected to know their ages accurately, the age returns are not correct. Here in India most people do not know their ages at all; if ever they have any occasion to know, they do not consider it necessary to remember them. Besides amongst uneducated people there is a superstition against telling age; it shortens life. This is not only true of Hindus but also of Muhammadans. Counting of men, specially of children, is regarded inauspicious by ordinary Indians. Elderly parents at times were heard to say in plaintive tone "count us but spare our children." All this is not peculiar to the State but common to other parts of India.

Inaccuracy of
Statistics.

There are other sources of inaccuracies. First, there is the wrong way of stating age. One in his 12th year, for instance, is reported 13 years old. To guard against this error, enumerators were instructed to enter the number of years completed last birthday and children under one year as infants. Then, there is the tendency to return age in vague numbers such as (पाँच, सात,) 5, 7, (दस, पंद्रह,) 10, 15, (बीस, पच्चीस,) 20, 25, (तीस, चालीस,) 30, 40, and so on. This produces lumping on 4, 5, or 10, or their multiples. Then again, there is a general tendency to understate or exaggerate ages at certain periods of life. Ages of unmarried girls of marriageable age are generally understated. In advanced years, some people, especially women, overstate their age. Amongst low class people, such as Chamars, Kolis, Kachhis, which form a major portion of the Gwalior State population, there is a widespread and absolute ignorance of age. Absurd answers are given to questions respecting age. One curious case came to my notice when I was seeing sample schedules filled in before

me in a mufassil town. An ordinary labourer gave his age as 40. The answer looking unsatisfactory, I asked him how old he was at the time of the Sepoy Mutiny. The answer was ten or twelve. That evidently would put him at 74. Questioned about the age of his son standing by, he replied in all seriousness: "The boy was born when wheat was selling 16 seers a rupee." This was too hard a problem to solve.

The entries of age are left more or less to the mercy of enumerators who cannot be expected, as a rule, to take sufficient care or trouble to elicit proper answers. Such being the case it is useless to expect correct age returns, yet the sources of error being the same from Census to Census useful comparisons can be made in spite of their unreliable character.

**Causes
affecting
Distribution of
Age.**

81. In the case of a people progressing normally the greatest number of persons should be at the age "under one year" and the succeeding numbers should gradually decrease from year to year, but as a matter of fact, this ideal condition seldom happens on account of disturbing causes such as famine, plague, influenza, etc. Migration also affects the distribution of ages, but in Gwalior its effect is negligible.

**Effect of
Famine.**

The general effect of plague and influenza can be very easily gauged, but that of famine requires a little explanation. It greatly increases the birth rate after its disappearance, but in a few years this increased rate falls and normal conditions are established. In this connection I should like to quote the following from the India Report of 1901:—

"When a tract is afflicted by famine the mortality rises in a greater or less degree according to the severity and duration of the calamity and the effectiveness of the measures taken to mitigate it. All sections of the population, however, are not equally affected; the very old and the very young suffer most, while those in prime of life sustain only a comparatively small diminution in their numbers.

"Consequently at the close of the famine, the population consists of an unusually small proportion of children and old persons and of a very large proportion of persons in the prime of life, *i. e.*, at the reproductive ages. For some years, therefore, in the absence of any fresh calamity, the growth of the population is very rapid. The number of persons capable of adding to the population not having been affected, the actual number of births is very little less than before the famine, but the proportion calculated on the diminished population is much greater and so too is the excess of births over deaths, as the latter are much below the average in a population consisting of an unusually large proportion of healthy persons in their prime, and of a comparatively small proportion of persons who by reason of old age, or infirmity have a relatively short expectation of life. This more rapid rate of growth continues for some time, but then as the persons who, at the time of the famine, were in their prime, pass into old age and their place is taken by the generation born shortly before the famine with its numbers greatly reduced by the mortality which then occurred, the birth-rate falls not only below that of the years following the famine, but also below the average. The disturbance of normal conditions is still not ended and the pendulum continues to swing backwards and forwards between periods of high and low birth-rate, but its oscillations gradually become fainter until they cease from natural causes to be apparent or, as more often happens, until some fresh calamity obliterates them."

**Sundbarg's
Theory
regarding Age
Distribution.**

82. According to Sundbärg, the well known Swedish statistician, the number of persons aged 15-50 in all European countries and America is uniformly about half the total population and that variations take place only in the other two main groups, '0-15' and '50 and over.' Where the population is progressive the number in the group 0-15 is much greater than in the group 50 and over; but where it is stationary the numbers in the two groups approach equality.

rise in the mean age of the people living, of itself, indicates an increase in the duration of human life, for, it is clear that the mean age is affected not only by mortality but also by the course of the birth-rate. If the birth-rate increases, the numbers in the younger age-groups increase also and this reduces the mean age of the living. On the other hand, if the birth-rate declines, the converse result follows. A population which is actually dying out is found to show a constant rise in the mean age of the living.

**Birth and Death
Rates deduced.**

Mean age also means the number of persons among whom one dies every year. Taking it to be 24·5, the average death rate of Gwalior is $\frac{1,000}{24\cdot5} = 40\cdot8$ per mille. As the population has decreased by ·9 per cent. in the State proper the birth-rate is 40·8—·9 or 40 approximately per 1,000.

Subsidiary Tables II and III give mean age at the end of proportionate figures. The mean age has been calculated by the formula adopted in French Census and recommended by the Census Commissioner for India.

**Mean Age by
Religion and
Locality.**

The in-set tables show mean age of the principal religions and the natural

Religions.	1921	1911
Hindus ...	24·67	24·5
Musalmans ...	25·79	25·8
Animists ...	22·3	22·1
Jains ...	27·17	26·17

Natural Divisions.	1921	1911
Gwalior ...	24·63	24·56
Low-lying ...	26·09	25·08
Plateau ...	25·45	25·27
Hilly ...	24·64	23·89

divisions for males. It will appear that Animists have the lowest and Jains the highest mean age.

**Relative
Fecundity.**

85. A glance at Subsidiary Table V shows that the number of children under 10 per 100 married females aged 15-40 has increased from 152 to 224 in the State as a whole. The greatest increase is in the Hilly tract which contains largest number of Animists and the lowest in the Lowlying area.

By District.

By districts, Mandasor is first, having 281 children per hundred married females, then come Amjhera, Narwar and Isagarh in order. The lowest number is in Gird Gwalior, being 152.

By Caste.

Subsidiary Table IV-A shows that Rajput Tonwars have 290 children per 100 married females aged 15-40. Then come Minas and Bhils, Bhilalas and Gonds who are grouped as Animists. Deccani Brahmans are least prolific of all Hindu castes, lower than even Jains.

By Religion.

From the in-set tables an idea of relative fecundity by religion

Religions.	Proportion of children under 10 per 10,000.	
	Males.	Females.
Hindus ...	2,633	2,791
Musalmans ...	2,436	2,752
Animists ...	3,384	3,665
Jains

Natural Division.	Proportion of children under 10 of both sexes per 100 married females aged 15-40	
	Males.	Females.
Gwalior State ...	93	87
Low-lying ...	92	82
Plateau ...	92	89
Hilly ...	103	106

and natural divisions can be obtained. It will appear that Animists are first, Hindus second, Musalmans third and Jains last in point of relative fecundity.

This comparative high fecundity of Hindus is due to many low castes like Mina, Saharia, etc., being included in them.

CHAPTER VI.

Sex.

Reference to Statistics.

86. Table VII gives the statistics of sex distribution for the State as a whole and of the districts by religion and age-periods. Provincial Table I, gives the sex figures for Tahsils. Comparative and proportional figures will be found in the Subsidiary Tables given at the end of the Chapter.

Subsidiary Table I.—General proportions of the sexes by Natural Divisions and Districts. (Table I of 1911.)

Subsidiary Table II.—Number of females per thousand males at different age-periods by religion at each of the last three Censuses. (Table II of 1911.)

Subsidiary Table III.—Number of females per thousand males at different age-periods by Religion and Natural Division. (Census of 1921). (Table III of 1911.)

Subsidiary Table IV. —Number of females per thousand males for certain selected castes. (Table IV of 1911.)

For want of vital statistics Subsidiary Tables V and VI could not be prepared.

Sex Proportions in Different Countries.

87. In England and countries of Western Europe, such as Germany, France, etc., females are in excess over males; but in some countries of Eastern Europe, Bulgaria and Greece for instance, and in most of the Asiatic countries the reverse is the case as will appear from the in-set table :—

Number of Females per 1,000 Males in Different Countries.

Portugal	1,107	France	1,034	United States ...	943
Norway	1,099	German Empire ...	1,020	Australian C o m m o n Wealth.	926

Austria.	1,036				

Sex Proportion in Gwalior.

88. Like most Indian Provinces, Gwalior State has more males than females. The actual figures are 1,696,510 and 1,498,966, which work up to 884 females per 1,000 males as against 903 in 1911.

If the 'natural population' be taken, i. e., total number of persons born in Gwalior and enumerated either within or without the State less the number of persons enumerated in the State but born elsewhere, the proportion rises to 900 per 1,000 males as against 924 of 1911. The effect of migration from or to the State on its sex proportion is, therefore, not inconsiderable. How far the sex proportions and natural population

are affected in the district, cannot be ascertained for want of migration figures for these districts. The figure is lowest for the Lowlying area and highest for the Hilly.

The diagrams illustrate the sex proportions of the natural divisions and of districts.

DIAGRAM SHOWING THE NUMBER OF FEMALES TO 1000 MALES AT EACH AGE-PERIOD.

89. Locality seems to have an influence on sex proportions. The Lowlying area has its proportion below and the Plateau and Hilly tracts much above the State average. The Hindus, Musalmans, and Animists show their highest proportions of females in the Hilly natural division, and Jains in the Plateau. Of districts, Tonwarghar shows, this time, as in the past Censuses, the lowest proportion of females, 801 to 1,000 males. Hindus, Musalmans, and Jains, all have more women of sixty and over in the Hilly tract while amongst the Animists the highest number of such women is found in the Lowlying division. Of course, it is not safe to rely too much on the age distribution.

Sex and
Locality.

90. From the Subsidiary Table I, it will appear that in 1881, the proportion of females to males was 849. In 1891, it rose to 872. In the next two Censuses, the proportions were 906 and 903. This time, the ratio stands at 884 for the actual population. So, the sex ratio rose considerably from 1881 to 1901. In 1911 it slightly declined; but the decline is very considerable at the present Census. The causes are not far to seek. Between 1891 and 1900 there was famine which affected the male population more than the females and raised up the proportion of females to males; in 1911 there was plague which carried away more females than males. But the effect of plague being more or less local, the reduction in the sex proportion was slight. But during the decade under consideration, the terrible Influenza which spared no part of the State, made greater havoc amongst the females and reduced their number very considerably as compared with the males. The rise and fall of sex proportions, therefore, has been caused by natural factors and does not seem to be due to omission from enumeration.

Comparison
with Previous
Censuses.

**Sex Proportion
by Religion
and Caste.**

91. Inspection of Subsidiary Table II shows that the main religions of

**Proportions of females to 1,000 males by
Religion and Natural Division.**

Religion.	Gwalior State.	Lowly- ing	Plateau.	Hilly.
All Religions,	884	828	913	979
Hindu ...	880	827	913	988
Animist ...	970	918	973	982
Musalman ...	860	825	890	893
Jain... ..	865	819	884	861

the State have excess of males over females, the Animists having the highest proportion of females to males and the Jains the lowest, as will appear from the in-set table. In the Lowlying area, as in the whole State, the Animists have the highest proportion of females, 918 and the Jains the lowest, 819. In the Plateau and Hilly tracts, the Musalmans

beat the Animists. In the Hilly tract, all religions show the highest proportion of females excepting the Jain. If we consider castes and races, we find from Subsidiary Table IV that Chauhan Rajputs show 1,305 females for 1,000 males, the highest record of all castes and tribes. Then come Bhil, Bhilala, Gond, grouped as Animists (968) and Ponwar Rajputs (901); Tonwar, Kachhwaha and Bhadauria Rajputs and Sanadhya Brahmans show very low proportions as will appear from a glance at column 2 of Subsidiary Table IV.

Sex and Age.

92. A reference to Subsidiary Table II shows that at birth (*i.e.*, 0-1 age), males exceed the females for all religions, but in a few years, females exceed the males owing to higher mortality among male children. Then the ratio of females begins to fall, the greatest fall being noticed at 10-15 age-period for the main religions excepting the Musalman who shows the greatest drop at 15-20 age-period. At 20-25, the proportion rises again for all religions. Then there is a slight fall which continues up to 50. At 50-60, the ratio rises and at 60 and over, females exceed the males in the general population and amongst Hindus, Jains, and Animists, pointing to the higher longevity of women in these religions. The same condition is almost revealed in the three natural divisions. For all ages, *i. e.*, on the whole, females are in defect.

The low figure of 10-15 is probably due to under-statement of age of the unmarried and over-statement in the case of married.

**Accuracy of
Return.**

93. Both in Europe and India, more males are born than females, but in the Western countries, the females, and here in India and most of its Provinces and States, the males, preponderate in later years. For want of vital statistics, I am not in a position to say whether males or females are born in excess in Gwalior, but Census returns at 0-1 age point to excess of male births here as elsewhere in India, as already stated in para. 92.

The question, therefore, naturally arises, why starting with the same condition, Europe should show in later years preponderance of females and India preponderance of males. This anomaly between the sex proportions in India and Europe has brought forth adverse comments from some Western (German) statisticians, who, taking the condition of Europe as the standard to which Indian condition should conform, attribute the deficiency of females in India to omission from Census records of women on account of their seclusion and the delicacy of their guardians to give right information about them. But this delicacy of Indians about their women might be with respect to questions relating to infirmities and age, for instance, and need not result in their omission from enumeration. So far as this State is concerned, I do not think people avoided giving such broad information as number of women in a family knowing very well that the Census was now being regularly carried out by order of the Darbar and failure to give correct answers was liable to punishment. It

has been asserted in most Census Reports that respectable Indians avoid returning unmarried girls aged 10-15, for fear of social stigma; but the stigma may very well be avoided by understating the age and not by the questionable wisdom of false returns. In this connection it may be stated here, that ideas about anti-puberty marriage are fast changing due to spread of education and culture, and concealment of female children for fear of social reproach does not appear to be probable.

The low return of age-period, 10-15, as has already been suggested, are probably due to misstatement of age and not to reluctance of guardians to return girls of this age group. During the age-period, 10-30, the deficiency of women, in all probability, is due to early motherhood with its attendant evils and un-scientific midwifery. This deficiency of women continues up to 50-60. At 60 and over females are in excess of males in the general population and for all religions excepting the Musalman.

94. The following reasons are generally advanced to account for the low proportion of female sex in India :—

Causes of Female Mortality.

- (a) Infanticide,
- (b) Neglect of female children,
- (c) Evil effect of early marriage and premature child-bearing,
- (d) High birth-rate and primitive methods of midwifery,
- (e) Hard treatment accorded to women, specially widows and
- (f) Hard work done by women.

Female infanticide does not now exist anywhere in this State and must be ignored as a factor causing deficiency of female sex. But it is very striking that Tonwarghar, the habitat of Tonwar Thakurs, should show, as in 1901 and 1911, the lowest proportion of females to males. Tonwar Thakurs, of all castes and races, show the smallest ratio, 526 of females in the whole State. In their own district they return the very low proportion of 438 per mille, *i. e.*, less than one female to two males. If female infanticide ever existed amongst Tonwar Rajputs, as tradition has it, Darwin's theory would lead one to expect gradual decrease of female bearing and increase of male bearing families as an after-effect of this cruel practice.* But with the spread of education and relaxation of the rigid laws of hypergamy the proportion of the female sex is likely to increase in future.

There is no intentional neglect of female children, but, male children, being considered a valuable asset, and girls, a burdensome liability, some indifference is likely to be shown to girls amongst Hindus except in educated and well-to-do families. This will produce an adverse effect on early female life, causing greater mortality during 0-5 age. Musalmans, amongst whom marriage of girls is not so expensive, show more females than males at 0-5 age-period. The effects of factors (c) and (d) have been already referred to in a general manner and are too well known to require a further discussion here.

Amongst low caste Hindus, widow marriage of some form or other, is allowable, and, re-marriage generally takes place in this part of the country. The widow of this class are, therefore, not so much a burden on others as high caste young widows, who are looked upon as drudges destined to work for the family. However, they possess higher longevity due to restrained

*See Mr. Johnstone's Report of 1901, page 60.

life and freedom from the dangers of child-birth, while amongst low classes, longevity of women is less on account of high child-birth and hard life they have to lead.

Sex in Urban Population.

95. In towns, females are very much outnumbered by males. The

Females to 1,000 Males.

		General population.	Hindus.	Musalmans.	*Jains.
Lashkar	...	803	798	820	838
Ujjain	...	803	766	923	753
Morar	...	642	630	678	779
Mandasor	...	929	929	909	936
Gwalior	...	953	938	1,002	875
Shivpuri (Sipri)	...	834	834	875	823

in-set table gives the ratios of females to males in six towns of the State. The very low figure of Morar is probably due to its being a Military Cantonment where the sepoys live

single, leaving their families at home.

In Lashkar, Ujjain, Gwalior, Morar and Shivpuri (Sipri) Musalmans show more females than Hindus. At Mandasor, Hindus are in excess of Musalmans. At Lashkar and Ujjain, male labourers are attracted from the interior and these being mostly low class Hindus, there is defect of Hindu females compared with Musalmans. Old Gwalior is the only place that shows more females than males under Musalmans. Another reason for the deficiency of females at Lashkar may be the inclusion in the city, figures of those of the Lashkar Brigade where troops live mostly single.

The sex proportion of Lashkar has fallen from 897, in 1901, through 840, in 1911, to 803, in 1921, a figure much below the State average, 884. The fall at Ujjain is still greater, the figures for 1901, 1911 and 1921 being respectively 915, 883 and 803. The main cause of this big drop in female population is the Influenza of 1918 which affected the towns more than the villages.

Examining the sex figures for Lashkar, for which alone, statistics by age are available we find that the Musalmans have 823 females as against 860 of Hindus at age, 0-1, but at 0-5, Musalmans show the highest figure of female children (1,010), a fact that points to less infantile female mortality in that community. As usual, the proportion of females is lowest at 10-15 for all religions, the Hindus showing the greatest fall. Up to 60, females are in defect of males, but at 70 and over all the three main religions show more females than 1,000 males, indicating higher longevity of women in urban population.

CHAPTER VII. Civil Condition.

96. Table VII gives the number of married, unmarried and widowed persons by age, sex and religion. Table XIV shows the civil condition of certain selected castes by age-groups slightly different from those adopted in Table VII. The five Subsidiary Tables appended to the end of the Chapter give proportional figures suitable for comparison and discussion of the statistics.

97. In Gwalior, marriage is not immediately followed by co-habitation except amongst Christians and high class Musalmans, who, as a rule, do not encourage early marriage. With Hindus and Jains marriage is an irrevocable betrothal and, between its religious celebration and consummation, there is always an interval which varies with the age of the girl and convenience of the parties concerned. Amongst most classes of people, therefore, real married life begins after puberty with or without a ceremony.

Under the category "married" are included all persons who had gone through the rituals of marriage and whose spouses were alive, irrespective of the question of consummation of marriage. Divorced persons were returned as widows and prostitutes as unmarried.

In Gwalior, as in all India, married life is the natural order and celibacy an exception.

males, it begins at one and ends at twenty at the most. Delay after that does not augur well for the girl or the family in ordinary cases. So the special features of Indian marriage, as compared with Western countries, are (1) universality of marriage, (2) infant or early marriage (3), the large number of widows, (4) prohibition of widow re-marriage.

Though marriage is obligatory many restrictions narrow the circle of selection of a spouse. In addition to the limitations of prohibited degrees of relationship on paternal and maternal sides the rules of endogamy, exogamy and hypergamy are all in vogue in the State in almost all religions, castes and tribes.

Introductory.

**Special Features
of Indian
Marriage.**

Religion enjoins marriage as a duty on all Hindus and Jains, male and female; but to males it is optional and for females obligatory. Men, both bachelors and widowers, may marry as many times as they can afford or wish to; but females must marry once only and even virgin widows should not re-marry except in lower strata of society. Marriage takes place in all ages from one to sixty for males, and, for fe-

General Statistics.

98. Of the whole population 47·6 per cent. of the males are unmarried, 43·1 married and 9·3 per cent. widowed while the figures for the females are 32·6, 47·5 and 19·9. Of the unmarried about 75 per cent. of the males and 94 per cent. of the females are under 15 years of age. In the group 10-15, 52·3 per cent. girls are married; during the 15-20 period 86·5 females are married while the proportion of married males is only 42·8. By 20, almost every woman, who is not any way disqualified, has been married. At 40 and over in every 100 we have 1·7 unmarried, 34·8 married and 63·5 widowed females, the male figures being 7·8, 66·3, and 25·9. At this period of life there are 5 widows to 2 widowers.

DIAGRAM SHOWING THE NUMBER PER 1,000 AGED 15-40 WHO ARE WIDOWED BY RELIGION

DIAGRAM SHOWING THE NUMBER PER 1,000 AGED 0-10 WHO ARE MARRIED BY RELIGION.

Civil Condition by Natural Divisions.

99. From the in-set table it will appear that the Hilly tract has largest

widowed persons are found in the Lowlying section.

number of bachelors and spinsters and the least number of widowers and widows. The Plateau claims the largest number of married persons of either sex. The greatest number of

In early marriage, both of boys and girls, as well as in the possession of child widows, the Plateau is easy first, then comes the Hilly tract, the Lowly- ing bringing up the rear.

In the Hilly tract Hindus marry their children earlier than in the other two divisions but not so the Musalmans. Animists of the Plateau region seem to have preference for early marriage of children of either sex.

100. The Hindus have about 2 per cent. less married males but 1·3 more widowers and ·7 per cent. more married females and 3·2 more widows than Musalmans. Hindus marry their girls earlier. At 5-10 they have 12 girl wives to 7 of Musalmans but during the period 15-40 Musalmans show about 2 per cent. more wives than Hindus. As can be naturally expected the Hindus have 4·3 per cent. at 15-40 and 5·9 per cent. at 40 and over more widows than Musalmans.

Variation by Religion.

In widowhood of both sexes, Jains are first and Animists the last. The Jains have 25·5 widows to 20·5 of Hindus, 17·3 of Musalmans and 11 of Animists.

In infant marriage competition lies between Jains and Hindus, the former

Married Persons per 1,000 of Each Sex.

Religion.	0-5		5-10	
	Males.	Females.	Males.	Females.
All Religions ...	23	26	43	114
Hindu ...	24	26	45	120
Musalman ...	21	25	31	73
Jain ...	13	54	18	102
Animist ...	13	19	28	57

having 2·8 per cent. more child-wives at 0-5 than Hindu. Animists do not favour early marriage of girls. At 15-40 the Animists show 2·6

per cent. more wives than even Musalmans. Jains show the least number of wives at 15-40 and 40 and over, 742 and 273 per mille respectively. They return the largest number of widows (70 per cent.) and Animists the least (49 per cent.). Hindus very closely follow the Jains, being only 5 per cent less.

Civil condition of Christians, Arya Samajists, Parsis and Sikhs is not considered in separate detail, these forming very small minorities of the population.

101. Subsidiary Table V shows that as regards infant marriage, Gahalot Rajputs stand first showing 444 boys and 158 girls aged 0-5 married per 1,000 of each sex. Between 5 and 12 years, 243 girls and 169 boys are married per 1,000. Then come, but far behind them, Oswal Baniyas (Hindu) who return 210 boys and 137 girls between 0-5 joined in wed-lock. At 5-12 they have 245 boy-husbands to 288 girl-wives. Porwal (Hindu), Mina and Bhats show 130, 156 and 128 boys, 126, 100 and 176 girls married during 0-5 years. Infant marriage of boys is least prevalent among Kachhwaha (12) and Bhadauria Rajputs (10), Dakshani Brahmans (16), Porwal Jains (16).

Variation by Caste.

Dakshani and Bhagor Brahmans return respectively 11 and 15 child-wives below 5 per every thousand.

Large Number of Widows.

102. Of the total male population 9·3 per cent. are widower while 20 per cent. of the whole female population are widows as against 9 per cent. in Western Europe.* Taking the distribution by age we get still more striking features. Thirty-one per cent. of the total number of widows are under 40 years and 2·2 per cent. are under 15 years, an age at which no one is married in Europe. In this respect we are worse off than the whole of India where the figures are 28 and 1·3 per mille.

As regards widows of 40 and over Sanadhya Brahmans stand first (713), then follow Bhagors (703) and Dakshani Brahmans (683); Saharias show the lowest number (120) per thousand females, the figure for the whole State being (635). As a rule, the number of widows in advanced age is very high among high caste Hindus who strictly discountenance widow marriage and comparatively low among lower strata where some form of widow marriage is prevalent.

Comparison with Past Censuses.

103. The decade shows less marriage and more widowhood in both sexes. Married males have gone down by 42, widowers increased by 22 per mille. Married females have dropped by 31 and widows increased by 8 per mille (Subsidiary Table I). All the main religions exhibit the same features more or less excepting Animists who return 12 per mille drop of widows. Less marriage and more widowhood reflect the hard economic condition obtaining generally during the decade.

Early Marriage.

104. Early marriage of boys and girls seems to have decreased amongst Hindus and Musalmans but Jains show decided increase during the decade (Subsidiary Table I). Educated public opinion is rising against early marriage. The Maharashtra Kshatriya Hitachintak Sabha patronised by the Ruler of the State has, as one of its objects, the increase of marriageable age of the Maratha children.

Widow Re-marriage.

105. Amongst high class Hindus the feeling against widow re-marriage is very strong. The educated community would seem to admit the necessity of the marriage of virgin widows but do not go against the current social opinion. But amongst the lower orders, widow marriage in some form is prevalent in the State. The most popular form is the levirate. But, if for some good reasons, the deceased husband's younger brother does not suit, the widow can select some one else paying a penalty to her brother-in-law or giving a caste dinner. No special ceremony is generally made nor does the priest officiate at such marriages. They are generally performed in obscurity.

Natra and *Dharicha* are the two most current forms of widow-marriage in Gwalior. The Darbar has provided for the registration of such marriages.

Polygamy.

106. Polygamy is not so fashionable in the Gwalior State; amongst the low class it is less frequent than amongst the high. A second wife is only taken when the first proves barren.

Polyandry.

107. It is unknown in the State.

* Taken from India Report, 1911.

108. From the two in-set tables, it will appear that early marriage, Proportion of Married and Widowed Persons per 1,000 of Each Sex at 0-10 Age. both of

CHAPTER VIII.

Literacy.

109. In the censuses previous to 1901, no information was collected in the State under the column "Education." Education, in those days, was confined to a very narrow range of the community and the statistics, even if recorded, would, doubtless, have been meagre. The instruction, given in 1901, to return the persons capable of reading and writing as literate, did not contain in it "the degree of proficiency in reading and writing which should qualify a person to be entered as literate." As the decision was left to the enumerators, the returns probably had varied from charge to charge and even from block to block according to the test applied in each case. The standard was not only indefinite but was also rather low and many persons returned as literate, in the Census of 1901, would not have been returned as such according to the accurate and precise test laid down in the Census of 1911 and retained also on the present occasion.

**Accuracy of the
Return in
Literacy
column in 1901.**

110. The direction to the enumerators on the present occasion was "to enter any person as literate who can write a letter to a friend and read the reply of it, but not otherwise." The present test, however definite it may be, demands such an amount of uniform care which cannot be expected from each and all of the enumerators. The accuracy of literacy statistics recorded, is thus vitiated by the varying amount of care with which the inquiries were made and the different degrees of self-conscientiousness with which the enumerators carried out the orders. But as the same standard was applied in 1911, there can be no difficulty in instituting an effective comparison of the present returns with those obtained in 1911, though it may be unsafe to attempt any comparison with the figures of 1901.

**In 1911, and
1921.**

111. No record was made on the present occasion, of the vernacular language in which a person was literate. Hindi, Urdu and Marathi, still remain the main written languages and no variation has occurred as regards their relative position in which they lay in 1901. A return was made of those who were literate in English in addition to their mother-tongue.

**Literacy by
Language.**

112. The statistics of literacy are contained in the Tables VIII and IX. Table VIII is divided into three parts; Part A, shows literacy by religion, Part B, gives details of literates of each main religion by districts, Part C, gives similar details for the city. Table IX shows figures for literates and illiterates by sects in selected castes. Of the *ten* Subsidiary Tables prescribed in 1911, the first *seven* have only been kept this time and the rest omitted according to the directions of the Census Commissioner for India. These Subsidiary Tables exhibit the chief comparative and proportionate statistics of literacy and set forth for purposes of comparison some of the main figures in connection with education issued by the Education Department.

**Reference to
Tables.**

113. The number of literate persons returned at the present Census in the State is 110,879 amounting to about 40 per mille of the total population or 1 person in every 25. Of males, 61 per mille and of females 7 per mille are literate. Thus, there are nearly 9 literate males to 1 literate female. Of the total number of literate males, over 73 per cent. are above 20 years of age and 4 per cent. are under 10. The remaining 23 per cent. are distributed

**Literacy in
General in the
State.**

between the age periods, 10 to 15, and 15 to 20. In the case of females also, the proportion is highest over 20 and lowest under 10. Persons returned as literates under 5, have been excluded, and in calculating proportions, the population under 5, has not been taken into account.

Comparison
with other
Provinces and
States.

114. Considering that there was very poor education even in the early nineties and that almost all the educational institutions have been established within the last three decades, the figures are neither very insignificant nor discouraging. Though Gwalior is behind in education in comparison with the

STATES OR PROVINCES.	NUMBER PER 1,000 WHO ARE LITERATE.
Gwalior	40
C. I. Agency States	36
Hyderabad	38
Rajputana States	39
U. P. of Agra & Oudh	42
C. P. & Berar	43
Punjab	45

most advanced British Provinces of Bengal, Bombay and Madras, its figure is very near to those of the neighbouring Provinces, *viz.*, United Provinces of Agra and Oudh, Central Provinces and Berar, and the Punjab. As compared with the sister States of Central India Agency,

Hyderabad and Rajputana, the proportion of literates per mille is higher in Gwalior than that in any of them.

The marginal diagram shows the extent of literacy by sex in the Natural

Divisions while the map (on the next page) exhibits the comparative statistics of literacy among persons in different districts.

Literacy
Natural
Divisions.

DIAGRAM SHOWING THE LITERACY
PER MILLE BY SEX IN
NATURAL DIVISIONS.

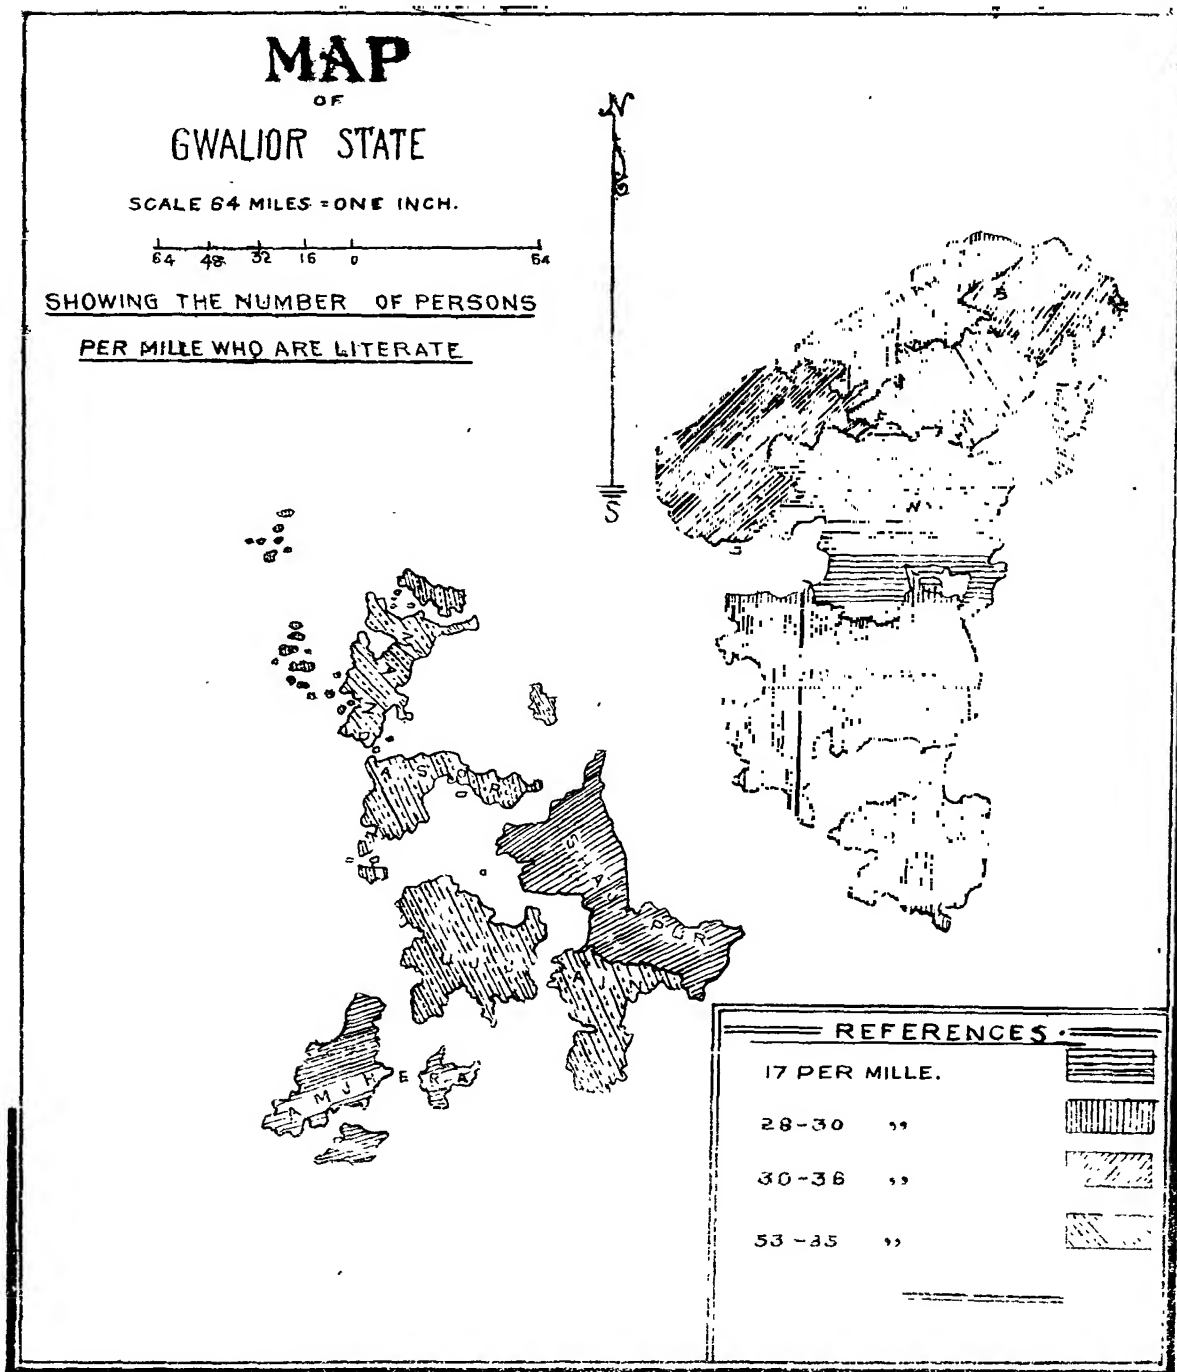

115. Both among males and females, the Low-lying division comes first in literacy, the Plateau second and the Hilly last, and the order is as it should be.

The Lowlying area, having a greater urban population than the Plateau and containing in it the capital city of Lashkar, which affords the greatest facility for education in the State, more than half the number of literates is returned from this tract alone. The only College in the State is in Lashkar and out of four High English Schools, three are in the Lowlying and in one district, the district of Gird Gwalior alone. The Plateau, in spite of having larger number of towns than the Lowlying, provides lesser educational facilities, Ujjain being the only place where a stimulus to education is given. The proportion of literates is, therefore, lower in the Plateau than in the Lowlying area.

The solitary district of Amjhera in the Hilly section abounds with Animistic races and low tribes and, as was expected, literacy is lowest there. Strange it may appear, the proportion of female literates in the Hilly tract

and the Plateau is the same, but when we come to know that the females, as a class, are illiterate nearly everywhere in the State, the small proportion in the Plateau does not seem to call forth any other explanation.

116. Among the districts, Gird Gwalior has the highest proportion. In every 7 males there is one literate in the district. Mandasor comes next with one literate in every 10 males. It is because of Mandasor having, of all districts, the greatest European, Anglo-Indian and Jain population, the most literate communities, that the proportion of male literates is higher in Mandasor than even in Ujjain. But in female literacy, Ujjain is ahead of Mandasor. Jain females are comparatively far backward to their males and almost all the Europeans and Anglo-Indians, either in the Cantonment or in the Loco Department of Nimuch, are single. Consequently, the proportion of literates among females in Mandasor is very low in comparison with males. Close to Mandasor is Ujjain with 95 males and 12 females literate per thousand of their population. The figures of other districts follow closely to

Literacy by
Districts.

each other ranging from 35 per mille in Bhind and Shajapur to 17 in Narwar.

Literacy by
Religion.

117. Looking to the distribution by religion, we find that the greatest amount of literacy is to be met with among Christians, Parsis, and Arya Samajists in order. In every hundred Christians, nearly 81 are literate. Of the males, 88 per cent. and of the females, nearly 67 per cent. satisfy the test of literacy. If we divide Christians into two classes, European and Anglo-Indian Christians on the one hand, and Indian Christians on the other, we find that of the former, only one-tenth, a very small fraction, is illiterate, while of the latter 52 per cent. or more than half are illiterate. Both sexes are equally literate among the European and Anglo-Indian Christians; the proportion among the females is nearly the same as among males. In the case of Indian Christians, the difference of proportions between males and females is comparatively wide. For 55 males claiming literacy among Indian Christians, there are only 42 females who stand the test.

As compared to European and Anglo-Indian Christians, the figures for literacy of the Indian Christians are, no doubt, small but considering that most of the local Indian Christians are converts from low castes of the Hindus, literacy among the Indian Christians is by far the greater than among the Hindus and even among the Musalmans and next only to Arya Samajists. I have been informed that the different Christian Missions are running, within their respective field of work, in different parts of the State, schools where the converts are given elementary education.

Parsis come next in literacy. They are generally a trading class here, for which, literacy is an essential requisite. For every three literate persons there is only one illiterate among the Parsis. Literacy is equally prevalent in both the sexes, the percentages being 75 and 74 in males and females respectively.

The Arya Samajists, who are dissenters from orthodox Hinduism, are, as a class, literate, the adoption of the new creed pre-supposing a certain amount of education. 62 per cent. of the community are literate. The females are less advanced than males, the proportion being 75 per cent. among the latter as against 44 in the former.

These are followed by Jains, most of whom are Banias living in towns, with 26 literates per cent. In comparison with females of other religions Jain females are far more backward than their males. While 44 are literate among 100 males, only 5 per cent. have been returned as such among females. Musalmans have 88 per mille literate. As larger proportion of Musalmans live in towns than Hindus, literacy is greater among Musalmans than among Hindus. Hindu community consists of a large mass of backward population steeped in the darkness of ignorance, so literacy statistics for the Hindus have been reduced by exhibiting the figures for Hindus as a general class. Literacy among Muhammadans is more than double that among Hindus. For 35 literates per thousand Hindus, the figures for Muhammadans are 88. Literacy in Hindu females is almost nil as yet. It is only 6 per thousand; the Muhammadan females give a much better figure 26. The Animists, as might be expected, come last with two literate males in thousand. There are no literate females in them.

118. If we study the statistics of literacy by castes, we see that some of the castes of Hindus are more literate than any of the castes of Jains or Musalmans, though literacy among Hindus, as a class, is least of all religions. Thus among various castes, Dakshani Brahmans and Kayasthas stand at the top with 414 and 335 literates respectively in thousand of their population. Then follows the Bania Mahesri caste with 315 literate per thousand. After this, come the Jain Oswals (with 303 per mille), Marathas (with 284 per mille) and Porwals of the Jain religion (with 246 per mille). Female literacy is very low among the Banias and the Jains in comparison with that of male. Thus in the Mahesri caste only 5 females are literate as against 535 males. Among the Oswals and Porwals too, the numbers of literate females are only 61 and 69 per mille respectively for the corresponding male figures 510 and 395. Marathas have higher literacy among females than the trading castes. They have 83 females literate in them in one thousand. Bania Agarwals, Gahois, who come next after Jains, give similarly very poor figures for females. For 433 literate males in Agarwals, there are only 37 females who are literate, while among the Gahois 13 females are literate as against 350 males who claim to be so. Among the Musalmans, Saiyad, a high caste in them, has the highest literacy in both the sexes, 228 males and 60 females being literate in every thousand of each class of population. The Rajputs, though a race of high class, are not very literate. The figures vary from 152 male literate per thousand among Chohans to 50 among Tonwars, females being backward in every sept to males.

The highest female literacy is to be found among the Dakshani Brahmans and Kayasthas who show, as has been already seen, the highest figures in the total also. The proportions per mille are 163 among the Dakshani Brahman females, and 118 among Kayasthas.

119. In the State, as a whole, there are 56 persons per ten thousand who stated that they knew English and only two females. The ratio is naturally highest in the Lashkar City, (528 males, 63 females per ten thousand), it

**Literacy by
Caste.**

**Literacy in
English.**

being the centre of higher education and the capital of the State where educated men from all parts of India find employment in the Government Offices.

Next to the city comes the Gird District, with 243 males and 19 females literate in English out of ten thousand. As Gird is the premier district of the State containing not only the capital city of Lashkar but the neighbouring town of Morar where there are some gentlemen residents of light and leading and are located the headquarters of the Residency, there are some English and Indian ladies literate in English in the district. After Gird stand in order Mandasor and Ujjain with 99 males, 14 females and 90 males, 3 females literate in English per ten thousand of the population of each class. In the British Cantonment, Railway Loco Department and in the general Railway Staff at Nimuch, a Pargana of Mandasor, is engaged a good number of Europeans and Anglo-Indians and so Mandasor has surpassed Ujjain in English literacy though the latter has provision for facilities for English education in the town of Ujjain. Except Lashkar and Mandasor, the proportion of females, who are acquainted with English, is so small that literacy in English may practically be said to be non-existing among the females of other districts.

**Literacy in
English by
Caste.**

120. Of all the castes, Dakshanis and Kayasthas take the benefit of English education to the greatest extent. It is worth noticing that the trading castes in which the proportion of literate persons is so high show great indifference to English education. Thus among the Jain castes 6 to 9 persons are literate in English in one thousand of the population. The Marathas show some literacy in English both among males and females. There are 87 males and 4 females per thousand who are literate in English in them. English education is not as yet wide spread in the State and among the females it is almost non-existing.

**Comparison
with 1911.**

121. The total number of literate persons in the State has risen, during the decade, from 69,013 to 110,879 or by 61 per cent. The number of literate males has increased by 51 and that of literate females by 347 per cent. The figures for 1911 are only for the then State proper and do not include the literates of the Feudatory Estates while the present figures are inclusive of both. As separate figures for Feudatories are wanting, no estimate can be made of the amount of real increase of literates in the whole State in the present Census from that of 1911. In literacy, the Feudatories are far more backward than the parent State into which they are merged this time. Even supposing the proportion of literates in the Feudatories to be the same as it is in the whole State, which is 40 per mille, the number of literates comes to 3,998 in the Feudatories. Deducting the number from the total of the present Census, we get 106,881 persons literate in the whole State minus the Feudatories. The increase is even then of 55 per cent. from 1911 in the area of the then State proper.

The proportion of literacy per thousand males has risen from 51 to 77 and the corresponding proportion for females from 2 to 8 in ages 10 and over. The improvement in the proportion of females is very great. The rate of increase in the proportion of literates in females has been continuous from 1901 and the number of female literates is nearly ten thousand as against 488 in 1901 so that it is double the number in 1901. But the number is yet small.

The progress in the general spread of education can best be gauged by looking to the number of each sex who are literate in the age group 15-20. In the whole State, the proportion per mille of literate males aged "15-20" has risen during the decade from 59 to 78 and that of literate females from 4 to 11. This may be due to the recent opening of more than 600 schools of various grades during the last decade and the number of pupils rising from 21,000 in 1911 to more than 43,000 in 1921. No new institution having sprung up during the decade ending in 1911, the proportion of male literates in the age-period, 15-20, was lower in 1911 than in 1901. All the districts with the exception of three, Narwar, Bhilsa and Amjhera, have, in the present Census, shown increase in the proportion of literates at this period. As the number of schools which existed during the decade ending in 1911, is not available by districts, it cannot be definitely said whether it is for the diminution, if any, in the number of schools during the last decade that the proportions in these places have decreased.

The increase in the number of literates is due not only to the opening of a large number of new schools during the last decade but also to the fact that Primary Education has been made free by His Highness the Maharaja in the whole State. The growth of literacy among the Marathas in rapid strides is mainly on account of the introduction of free compulsory education for boys of the same caste.

CHAPTER IX.
Language.

122. The statistics recorded at the Census regarding language will be found in Table X. The following Subsidiary Tables, in which the main features of the return are given in a concise form, are placed at the end of the Chapter :—

Reference to
Statistics.

- I Distribution of total population by language according to Census.
- II Distribution by language of the population of each district.
- III Comparison of aboriginal tribes with their languages.

123. Languages in these Tables, have been classified in accordance with the scheme drawn up by Sir George Grierson. Excluding the unclassified gipsy languages, there are five distinct vernaculars of the State, all coming within the Indo-Aryan Branch of the Indo-European Family with the only exception of Gondi, which has undergone such a transformation in contact with the Malwi dialect of the Rajasthani language that people are not inclined any longer to reckon it as one belonging to the Dravidian Family. So, practically, the languages of the State fall under two sub-branches of the Indo-Aryan Branch:—

Classification of
the Languages
Spoken in the
State.

- I The mediate sub-branch, and
- II The inner sub-branch.

Of the Eastern Hindi, the only dialect, Baghelkhandi, is proper to the State. It comes within the “mediate group” of the above mediate sub-branch, while Bhili, Rajasthani, and Western Hindi all lie under the “central group” of the inner sub-branch. Of the last three languages, there are at least fifteen different dialects spoken in different parts of the State and perhaps more, if Bhili, Bhilali and Rathavi be reckoned as separate dialects, as they are considered to be so both by the speakers themselves and the people in general.

Languages not proper to the State have been classified under three broad heads:—

Languages
Foreign to the
State.

- I Languages of India,
- II Languages of other Asiatic Countries, and
- III European Languages.

The Indo-European Family and the Dravidian Family comprise all the languages of the above three heads.

DIAGRAM SHOWING THE DISTRIBUTION OF THE POPULATION
BY MAIN LANGUAGES.

The Accuracy of the Return.

124. To test the accuracy of the return we must look to the directions given to the enumerators for entry in the language-column of the Census Schedule. The direction was to enter "the language which each person ordinarily uses in his home." There were several difficulties in obtaining a correct return from this direction, and the difficulties varied in their nature according to the classes of people, villagers or residents of big towns, dealt with in enumeration. In villages, majority of the people do not know precisely what their mother-tongue or *madri zaban* is. For Baghelkhandi, the various dialects of Rajasthani and almost all the dialects of Western Hindi, there is one popular term Hindi. In cities and big towns the number of literates having a knowledge of their own dialect being comparatively large, there was apparently no probability of wrong return in the language column by the enumerators who themselves had also a better idea of the different forms of dialects than the village enumerators. But, most of these people being bilingual, mistakes were apt to be made in this case also by the enumerators entering the language in which persons spoke to them instead of that which they speak in their families. These difficulties are common almost everywhere in Northern India to a great or small extent. In Gwalior, the difficulty of the enumerators to distinguish the tongues is the greater as no language is spoken in purity.

Statistics of Dialects Proper to the State.

125. This is the reason why the figure for Hindi has swelled to an enormous extent at the cost of other languages. The increase of Hindi speakers at the present Census is not due to the lower standard of accuracy in the return of languages but is due to the inclusion of the figures of the Feudatories, where Hindi is supposed to be the prevalent language.

Other dialects in which the number of speakers has increased are Bhili, Khichiwadi, Sipari, Sondhi, Urdu, and unclassed gipsy. Of the increase of speakers of Bhili dialects and the non-aryan languages, (Gondi and Gipsy), it may be said that the Animistic races using these tongues have greatly multiplied during the decade. Urdu speaking population has more than doubled and Bhilsa has come to occupy at the present Census the foremost place in Urdu while Gird Gwalior was the district where it has been, till the present Census, chiefly spoken. The surprising increase in the number of Urdu-speakers in Bhilsa is doubtful. Majority of the agricultural labourers who immigrated in large numbers shortly before the Census from Bhopal and other States of Central India Agency, have, I am afraid, been returned, on a wrong notion, as Urdu-speakers.

Nearly 15 thousand persons have been returned as speaking Sipadi dialect though there was not a single Sipadi-speaker last time. This may be due to better understanding by the enumerators of the difference of languages than before. The same may be said of the increase in the number of Khichiwadi and Sondhi speakers.

Decreases in the number of speakers are found in Malwi, the language of Malwa, Nimadi, Bundelkhandi, Bhadauri, Hindustani, Jatwari, and Kachhawahi. Decreases in most of these are unaccountable. One reason seems to be that most of the districts in which these languages were chiefly spoken in the last time have suffered decrease in population.

Dialects Foreign to the State.

126. Of languages derived from Dravidian stock, Tamil, Telegu and Canarese have only been returned. The number of speakers in all these three combined is only 292 in the whole State. The tongues most favoured by the immigrants are Mewadi, Brijbhasha, Marwari and Marathi. The number of

speakers of Mewari is greatest among the 'languages not proper to the State.' As Mewari is a dialect of Mewar in which a considerable portion of the district of Mandasor (Pargana Gangapur) is situate, more than 80 per cent. of the speakers have been returned from that district. Thus has the number swelled though the Mewari speaking immigrants are not so large in number within the boundaries of Gwalior as it lies in Central India. Brijbhasha comes next. It is a dialect of Western Hindi spoken chiefly in those districts of the State which are in the vicinity of Agra and the Native State of Dholpur where Brijbhasha is most prevalent. Some 23 persons have been returned as speaking Antarbadi, which, Dr. Grierson says, is another name for Brijbhasha but is known popularly to be a dialect different from it. The speakers of Marwari are generally merchants scattered throughout the State while Marathi is the language of the ruling class and the Dakshani Brahmans resident in the State. Official work, in some branches of administration, *e. g.*, in the Finance and Revenue Departments, is conducted in Marathi. So Marathi, though not an indigenous language, still, for practical purposes, occupies an important place among the various dialects spoken in the State. Of the languages of other Asiatic countries, Persian and Arabic are the only two tongues found in use only by a few immigrants most of whom come from their native lands in Persia and Arabia to sell the merchandise they carry along with them. Among the European languages, the number of Portuguese-speaking people has increased from one in the last Census to 26 in the present. It is probably due to more correct return of the language than that of the last Census.

127. In the State, not only are the aboriginal languages gradually being superseded by dominant Aryan tongues, but the tribal dialects (dialects of Bhils, Bhilalas,) also are losing ground. Malwi, the dominant dialect of Malwa, has nearly ousted Gondi. The latter language, as it still survives, has been so much influenced by Malwi that Gondi is known now to be only a corrupt form of Malwi. The Gonds have almost increased three times in number during the last decade, but the figures for Gondi speakers, as seen from Subsidiary Table I, are only a little more than double of those in the last Census. Gondi is yielding place to Malwi and Bhilsa, the chief place of Gondi, has come to occupy the second position in the State as regards the strength of the Malwi-speaking population. The Bhils, Bhilalas, have more

**Non-Aryan

Number of Bhils, etc., returning tribal languages				...	56,969	
Number of Bhils, etc., who have abandoned their tribal tongues over and above those who have returned themselves as Hindus.				...	38,001	

97,417 Bhils have returned themselves as Hindus. Supposing these persons have abandoned their tribal dialects and have taken to other tongues such as Hindi or Malwi, the most largely spoken dialects of the State, there remain 94,970 Bhils, Bhilalas, who are expected to speak their own dialects. But the number of speakers of Bhil dialects is only 56,969 which shows that over and above those (2,447) who have returned themselves as Hindus, about 38 thousand more Bhils, *i. e.*, in all 40,448 have given up their mother tongues and adopted other Aryan tongues prevalent in the locality (Subsidiary Table III).

128. Gwalior is a State where allied tongues are found to exist side by side. These tongues, distinguishable chiefly by intonations from each other are popularly known by the general name Hindi, though each of them is

**Influence of

Levelling
Language
Distinctions.**

a separate dialect bearing a separate name according to Dr. Grierson. The reason that people are loath to give special names to Baghelkhandi, Bundelkhandi, Hindustani, seems to be that they are used to these allied tongues and find no difficulty in understanding each other in an assembly of speakers of different dialects. With the advance of time, communication becoming easier by the spread of Railways, etc., the various shades of differences have been minimised to some extent. The influence of education is visible in bringing different people on the common platform and thus necessitating free exchange of thought. Thus from the different forms of Hindi, mutually intelligible, have arisen a colloquial dialect ordinarily called Hindi, but practically very near to Hindustani, capable of being spoken and understood from one corner of the State to the other. This dialect is the medium of expression in societies and among persons of different districts. It is becoming more and more popular with a certain class of persons. It is neither Sanskritised Hindi of the present day, so ardently advocated by the lovers of Sanskrit, nor does it wholly approach to Urdu but is something mediocre between the two. It is, practically speaking, the *lingua franca* of the State. But there is no rich literature of this common dialect.

Here, as in other Provinces, there are two parties on the long-standing question of the style of the Hindi literature. The class in favour of the colloquial Hindi, desires that Hindi should be bereft of words of Sanskrit origin, but there is the other party which tries to introduce Sanskritised Hindi. The Weekly Journal, "Jayaji Pratap" of Lashkar aims at making this Sanskritised Hindi the language of books and literature and it contains articles written in the same Hindi.

In schools, Hindi books written in both the styles are prescribed for study.

129. Official language is generally the common colloquial Hindi written in Devnagri script. In Courts of Law, legal terms of Arabic and Persian origin are of frequent use, but the script is also Devnagri. Devnagri script is almost universally used in the State.

CHAPTER X.

Infirmities.

130. This Chapter deals with statistics of infirmities recorded in Tables XII and XII-A, and Subsidiary Tables given at the end of the text. Table XII consists of two parts. Part I gives the number of afflicted persons for the State as a whole by age and Part II the total afflicted population and their distribution by districts. Table XII-A gives the statistics for some selected castes.

Introductory

131. Infirmities are entered in column 16 of the Enumeration Book. The entries, being few and far between, were likely to escape attention, if they were abstracted along with other entries of the Census Schedule. To obviate this risk, the information about infirmities was collected on separate slips and sorted by one who was especially entrusted with this work.

Accuracy of Returns.

As on the previous occasions, only four kinds of infirmities have been recorded, viz., Insanity, Deaf-mutism, Blindness and Leprosy. No such record was made in Gwalior State before 1901, hence comparison will not be possible with figures of earlier Censuses.

In 1901 very little instructions were issued to enumerators for recording the infirmities and the returns, therefore, were not very accurate. In 1911 definite instructions were issued to enumerators and the returns of that Cen. as were expected to be more reliable than those of 1901.

Yet it must be admitted at the outset, that infirmity-figures are less reliable than other Census figures. Enumerators are not men of high education and in spite of supervision and instructions there must have been errors of diagnosis. It is difficult to draw the line of demarcation between idiocy and insanity. Correct diagnosis of leprosy also is not easy to make. It is often confounded with leucoderma and some other diseases as tertiary syphilis. Deaf-mutism is particularly difficult to distinguish. The only malady that is easy to tell is blindness. In addition to these difficulties of diagnosis there are to be reckoned with the natural tendencies for wilful concealment both among the high and low in all the four infirmities generally and corrosive leprosy particularly. But causes of error and uncertainty almost remaining the same from Census to Census, the statistics of infirmities of one census would give a working basis for comparison for subsequent Censuses.

132. The total number of persons suffering from each infirmity and the

Variation since 1901.

Infirmity.	Number afflicted.		
	1921	1911	1901
Insane	447	203	165
	14	7	6
Deaf-mutes	1,416	645	875
	44	21	20
Blind	6,139	4,537	1,951
	192	146	66
Lepers	418	463	251
	13	15	9
Total	8,430	5,840	3,240

The figures in italics represent the proportion per 100,000 of the population.

indicate any real increase.

proportional variation is given in the inset table from which it would appear that the figures for the first three infirmities have increased and leprosy somewhat decreased during the intercensal decade. Compared with 1901, all the infirmities show high figures which probably is due to the better understanding and carrying out of the instructions for enumeration and may not

It should be noted that as figures of 1911 could not be adjusted to those of 1921 the comparison is only approximate.

Insanity.

There are various forms or degrees of insanity which even in England it has been found difficult to distinguish. In India the difficulty is all the more great. The figures for insanity, therefore, might include the imbecile, as well as those that are insane in the strict sense of the term though the enumerators were instructed to return only real cases of insanity.

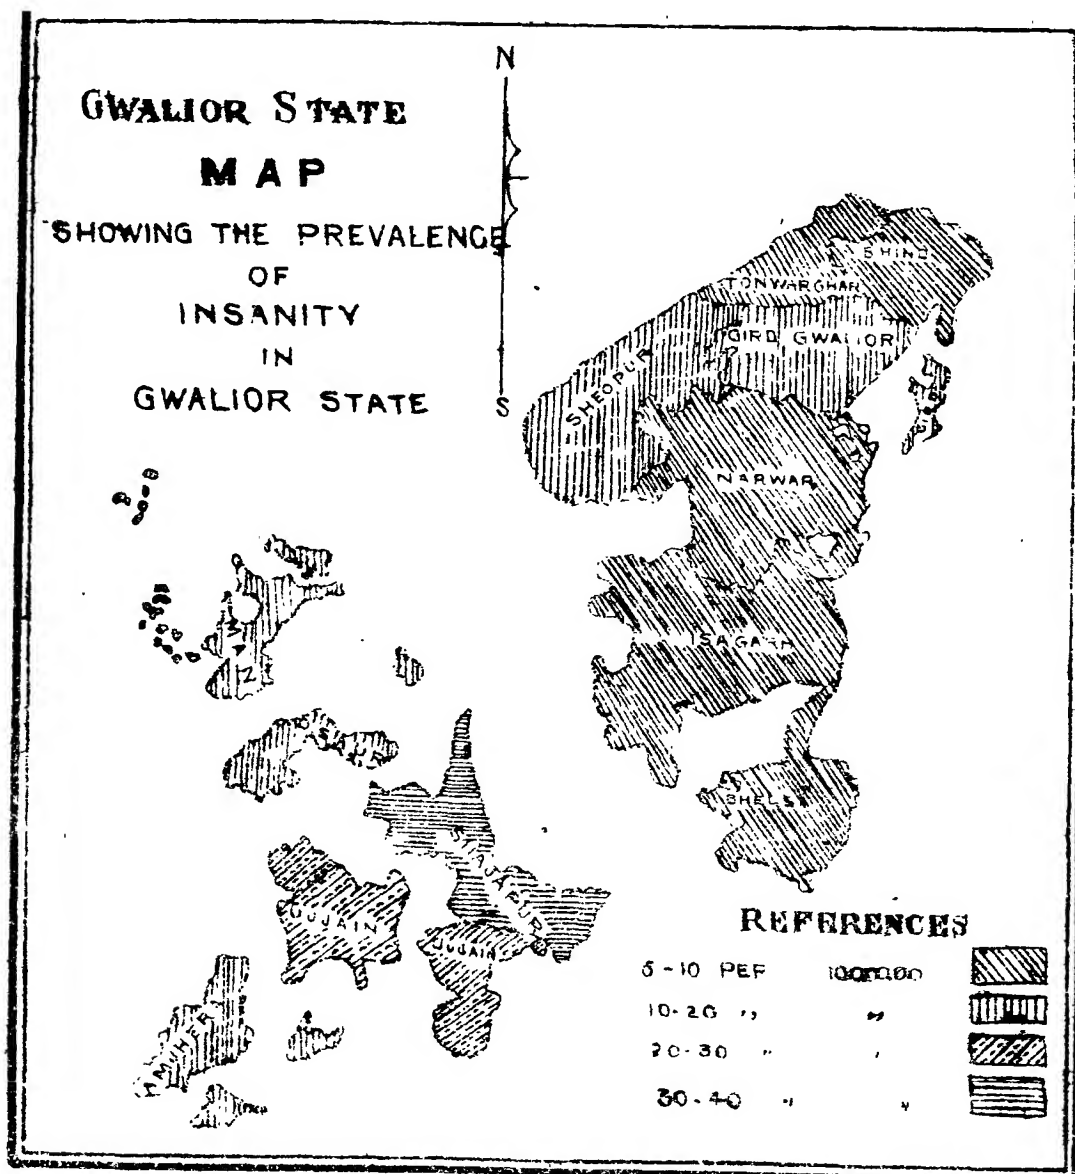

From the inset table given in the beginning of the Chapter on page 83 it will appear that insanity has increased by 125 per cent. This may represent real increase or may be due to better enumerations, but the decade being one of economic pressure there is no wonder if insanity has increased.

The comparative figures of Gwalior and the contiguous provinces and

Provinces.	NUMBER PER 100,000.	
	Males.	Females.
Gwalior, 1921	18	10
India, 1911	31	20
Central India, 1911	10	5
United Provinces, 1911	23	12
Central Provinces, 1911	19	11
Rajputana, 1911	18	9

India are given in the marginal table. A glance at this will show that our figures compare well with other provinces excepting Central India, figures for which were admitted by the Superintendent to be too low.

The distribution by districts is shown in Subsidiary Table I and is illustrated in the map below:—

It appears therefrom that in insanity Shajapur takes the lead showing 43 males and 26 females per 100,000, then comes Ujjain, 35 males 20 females. Gird shows 23 males 10 females insane.

The age and sex figures are dealt with in Subsidiary Tables II and III. Subsidiary Table II shows that the number of the insane is greatest at 25-30 for males and 30-35 for females. At 0-5 the male insane are more than double of female insane, but at 40-45 females exceed the males. Of every 100 insane persons there are nearly 64 males and 36 females. This deficiency of the female insane may be partly due to concealment, but it may also be due to their freedom from the struggle for existence and intemperance and excesses of various kinds.

DIAGRAM SHOWING THE NUMBER OF INSANE PER 100,000 OF PERSONS OF EACH AGE PERIOD.

The insanity curve for the males is anomalous and shows downward drops and upward jumps at successive age-periods after '20-30'. Its steep ascent at 50-60 indicates that ordinary cases of senile derangement have been mixed up with real cases of insanity. The female curve shows a sharp rise till the age of 20 and then, the period of puberty and early child-bearing being passed, it increases slowly till the age of '50-60', *i. e.*, after the change of life.

Children of either sex are comparatively free from this affliction which is also partly due to the fact that insanity develops itself in the prime of youth.

Deaf-mutism.

133. In 1911 enumerators were instructed to return only those that were deaf and dumb "from birth." This time the words "from birth" have been omitted by the Census Commissioner. It was, therefore, anticipated that figures for Deaf-mutism would be higher than in 1911 and this has turned out to be true.

Introductory.

Comparative.

134. Deaf-mutism has increased by 120 per cent.

					1921		1911	
					Male.	Female.	Male.	Female.
0—10	21	13	17	12
10—20	39	21	35	24
20—30	49	23	29	19
30—40	35	37	28	21
40—50	77	58	19	16
50—60	103	77	13	16
60 and over	190	151	13	9

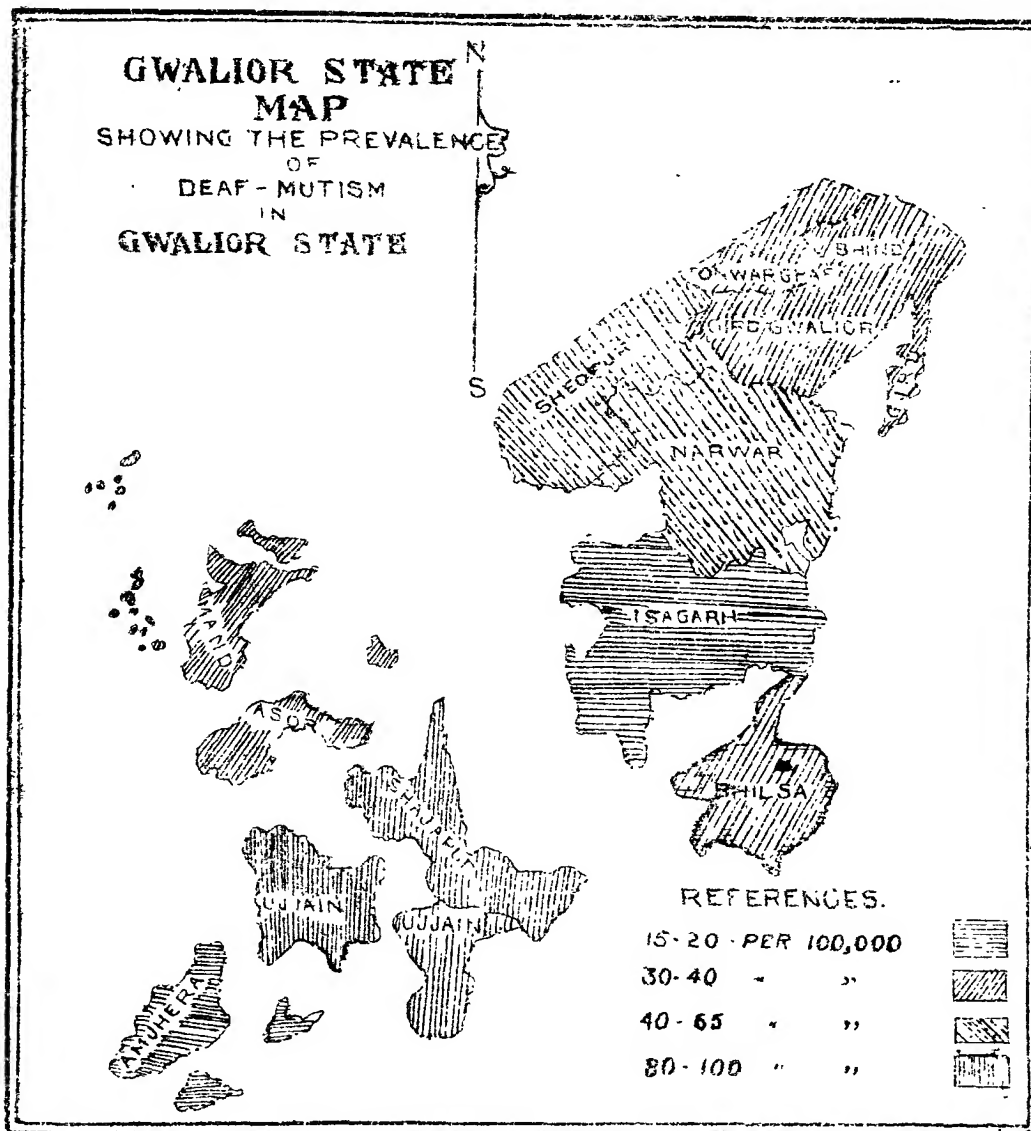

Examination of the figures by age-groups shows the highest to be reached at 60 and over both for males and females. Deaf-mutism being a congenital disease, the maximum should be at earlier periods. The reverse of the expected result can only be explained by supposing that good many people that suffer from senile defect in advanced age have been entered in the category. This would account for the anomaly of the curve which instead of coming down goes higher and higher with age-periods. The 1911 curve which represents deaf-mutism from birth is more regular, though the enumeration was not claimed to be very accurate by the then Census Commissioners for Gwalior.

Subsidiary Table III shows that for thousand males afflicted, there are 595 female deaf-mutes.

135. Deaf-mutism is said to be determined by local physical conditions. I do not know if the physical and sanitary conditions of Shajapur which claims the greatest number of all the four infirmities have got anything to do with this unenviable position of the district.

**Local
Distribution.**

Blindness.

136. Blindness has increased by 35 per cent. on the figures of 1911, probably due to better enumeration. A comparison with other parts of India will show that the returns of 1921 are probably more correct.

Comparative.

Blindness is a disease of which nobody is ashamed nor desire to conceal,

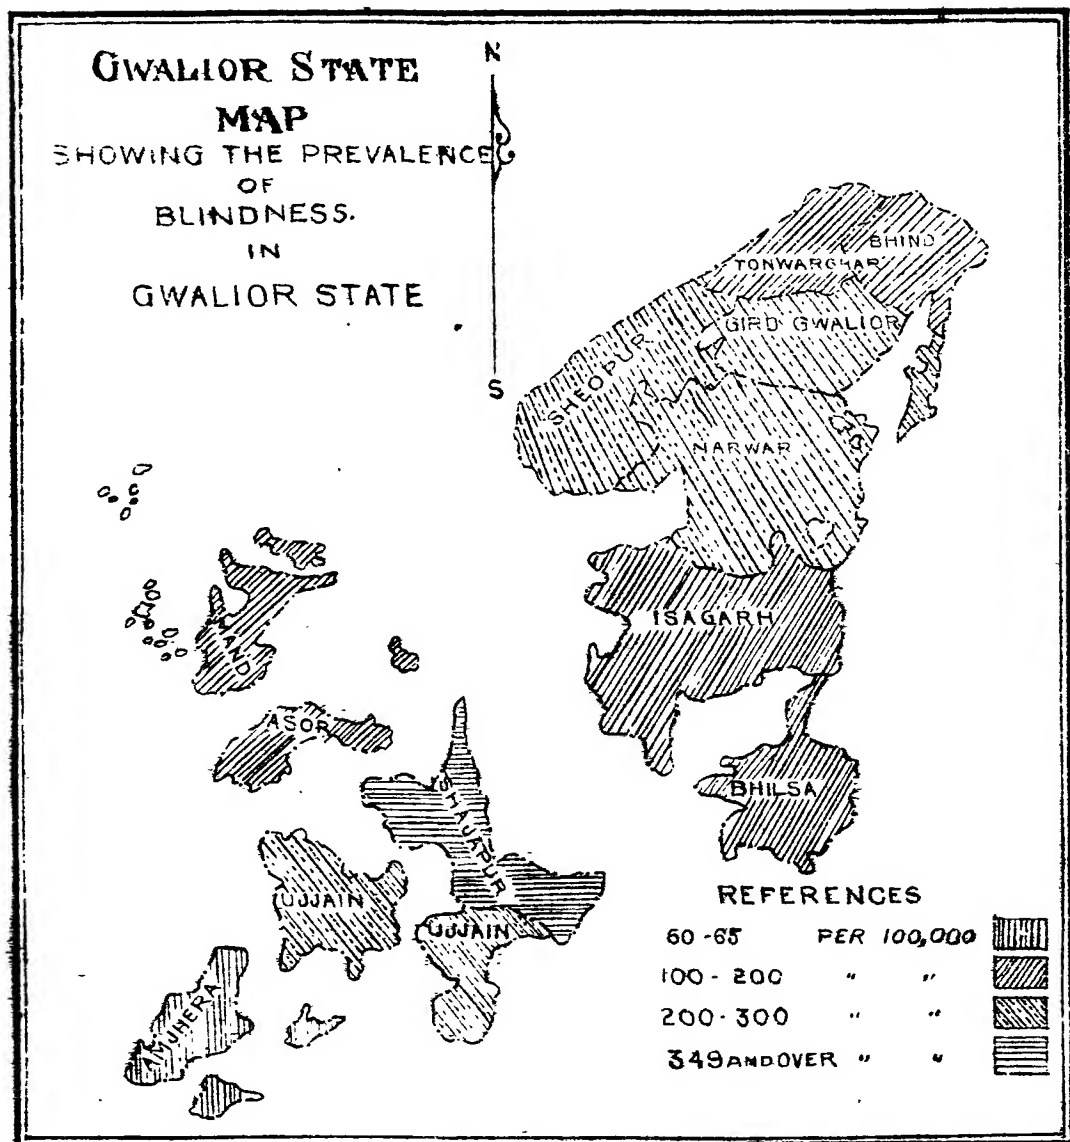

Province.	Males.	Females.
Gwalior, 1921	161	227
Gwalior, 1911	124	157
Central India, 1911	109	128
United Provinces, 1911... ..	168	178

moreover it is easy to diagnose. The result of enumeration may, therefore, be taken as correct. The figures represent total blind-

ness only.

Local
Distribution.

137. In this infirmity also, Shajapur takes the lead and then follows Ujjain.

Female blind exceed the males in both places.

Subsidiary Table III shows that for every thousand males there are 1,241 females blind in the State as a whole.

Up to age 20-25 males preponderate but after that the female figures rise rapidly. Blindness being a disease of old age, the curve rises rapidly at the later periods both for males and females. That most of the blind people, both male and female, are at on 40, shows that the chief cause of blindness in this

country is cataract which is a disease of old age. Blindness due to cataract is produced by external causes that do not develop all at once and do not suddenly prove fatal and take time to develop. The larger proportion of females at higher ages is probably due to the fact that Indian women do not seek medical aid or are neglected.

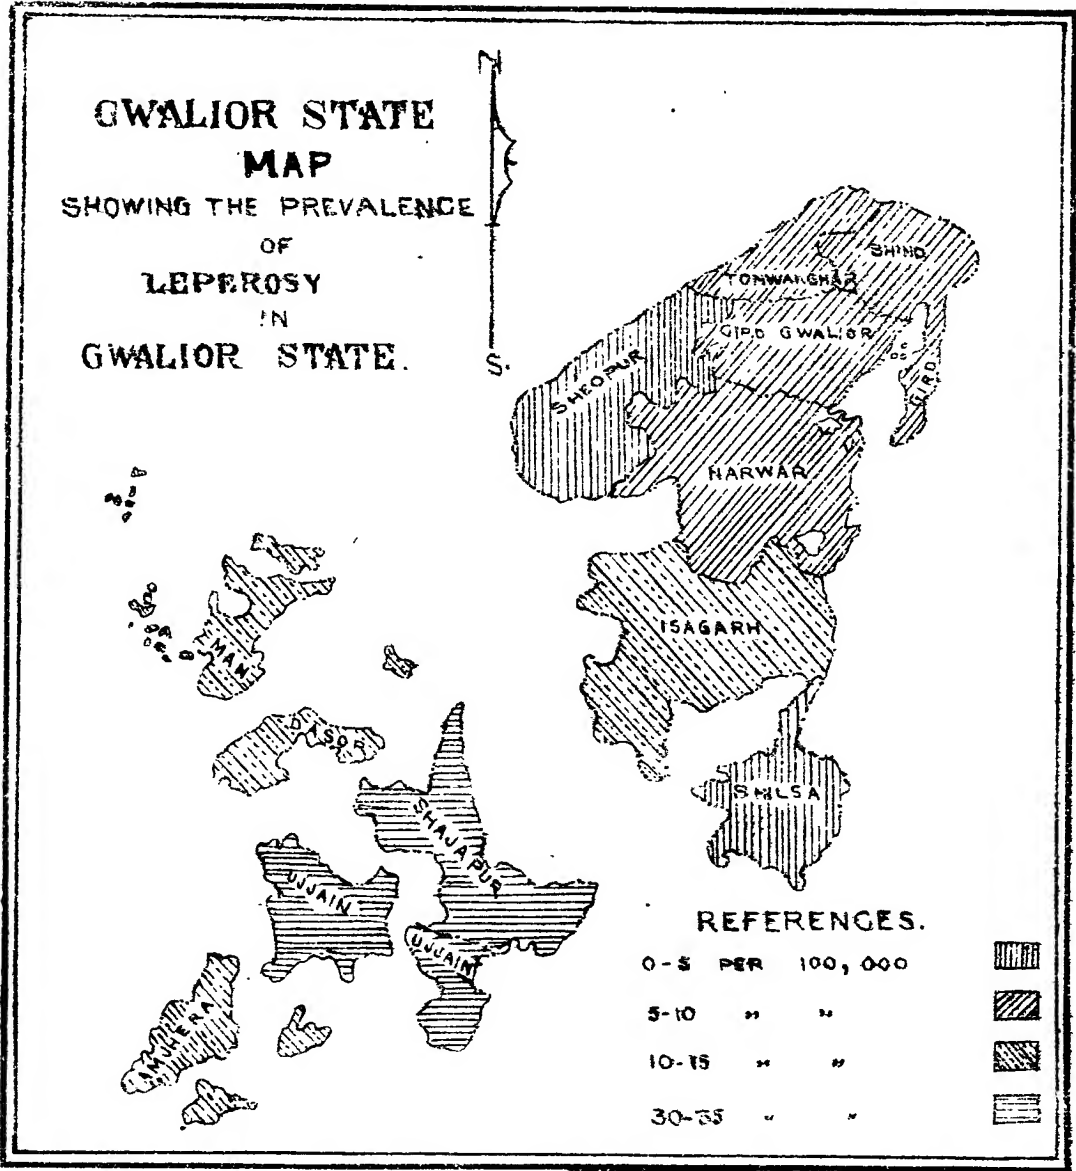

Leprosy.

138. It would appear from the inset table referred to in paragraph 132 that of all the four infirmities only leprosy has decreased, though slightly. Introductory.

In instructions the enumerators were only to return corrosive leprosy and ignore leucoderma (white leprosy). Errors of diagnosis therefore were not likely very large. But in this particular malady there is greater possibility of wilful concealment both in the case of males and females. Even the poor lepers who would, a decade ago, wander about

begging in public streets by exciting peoples' sympathies do now hide themselves fearing segregation in asylums of which one has been started at Ujjain.

Lepers.

Age-period.	1921		1911	
	Male.	Female.	Male.	Female.
0-10	1	1	1	1
10-20	2	3	4	2
20-30	14	6	17	11
30-40	35	15	31	12
40-50	51	17	66	19
50-60	50	27	55	21
60 and over	41	12	45	17

Comparative.

139. There are more male lepers than female ones. For 1,000 male lepers there are only 380 females afflicted with this loathsome disease. This excess of male lepers may be partly due to concealment of female lepers, but it may also be due to the fact that men are more liable to such disease than women.

Subsidiary Table III shows an excess of female lepers from 0-10 to 10-20 age-period. Afterwards the males increase.

The male curve rises sharp from 20-30 to 40-30. From there it rises still more rapidly till 40-50 age-period. It then drops from there. From 50-60 its descent is rather quick. The female curve rises from 10-20 more or less till 50-60 and then slopes down more rapidly than the male curve. This shows that a leper is not a long-lived person. A leper's life is a comparatively short one. According to the estimate of Daniellisen and Boeck the average duration of life from the date of attack is only $9\frac{1}{2}$ years for tuberculated and $18\frac{1}{2}$ years in the case of anæsthetic leprosy.

CHAPTER XI.

Caste Tribe and Race.

130. The present Chapter deals with the figures in Table XIII and those contained in Subsidiary Tables I and II appended at the end of the Chapter.

**Reference to
Statistics.**

The statistical information of the strength and distribution of the Castes, Tribes, and Races of the State is contained in Table XIII which gives by districts the numerical strength of those castes which are sufficiently numerous or important as to represent the main composition of the population in its various grades. Subsidiary Table I classifies these castes according to occupation with which they are traditionally associated and Subsidiary Table II which presents only those castes of Hindus and Musalmans whose strength are more than two per mille, compares the figures of the principal castes to the corresponding figures of the previous censuses. In Subsidiary Table II, the figures of the different castes of Brahmans and Rajputs have been lumped and shown against the general designations Brahman, Rajput, etc. Under Bania, which is a general term including castes of Hindu and Jain religions both, have also been grouped together the whole strength of that appellation and not the population of Hindu Bania only; so also in the case of the tribal castes such as Bhils, Saharias, Minas, etc., part of whose population are Hindus and part Animists, the whole strength of each tribe has been exhibited combined with the Hindu figures.

**Nature and
Accuracy of the
Return.**

131. To obtain a correct return of the various castes found in the State, detailed instructions on the entry of the real castes in column 8 of the Schedule were given to the Census Agency. These instructions were based on the experience of the previous censuses, the common errors made on those occasions having been carefully studied. In spite of these instructions inaccuracies have occurred in the return of caste which seem to be attributable to the want of care on the part of enumerators to find out the real caste names. Thus, a large number of entries have been found under general names such as Brahman, Bania, Rajput instead of under the true caste names. These entries were at first classified as "unspecified" and shown separately with the sub-castes of Brahman, Bania, Rajput but at the suggestion of the Census Commissioner for India they have been thrown into "others" which at first included castes of minor importance only. "Others," thus, include not only the figures of the minor and unimportant castes whose strength are less than 1 per mille but also the returns under general designations. Among the castes of inferior numerical strength lumped in "others," some entries have been found in the territorial names instead of under true caste names viz., Bengali Brahman, Madras Brahman, etc. But these errors are with regard to a few outsiders in the State, and much weight need not be given to them.

Rigidity of caste feeling or exclusiveness is somewhat relaxing with the spread of education but there is a growing desire to claim a higher social status or religious precedence. Thus, the Kachhwaha Maha Sabha of India requested for the entry of some Kachhis as Kachhwaha Thakurs. The

Kayasthas (of Lashkar) desired that they should be recorded by their Varna-name-Kayastha Chhatttri Varna, and lastly the Tera Panthi Jains asked to be entered by their sect name Digambri. These petitions were rejected on the ground that the Census has only to record the names of the existing castes and nothing to do with the recognition or admittance of their claims for higher ones or of the entry of the *varna* or sect names in which they wished to be classified. There appear to have been no other errors than these and the figures for the principal castes exhibited in Table XIII and Subsidiary Tables can be accepted as a fairly correct record of their numerical strength.

132. In the present Census, 159 separate castes of Hindus, Musalmans

				Castes.	Sub-Castes.
Hindus	102	77
Musalmans	38	...
Jains	10	...
Animists	9	...
TOTAL				159	77

Jains, and Animists have been returned against 153 in the Census of 1911. In the sub-castes of Brahman, some 8 new names have been found in the schedules for which there is no men-

Increase in the Number of Castes.

tion in the list of 1911. A few of them have been returned in the territorial names, instances of which have already been pointed out. These sub-castes are all of insignificant strength and being foreign to the State, are practically of no importance before the local castes. So, they have been thrown into "others." Among Rajputs, three names, namely, Hai-Hai-Banshi, Gautam, Pawaiya occur for which there are no figures in the list of 1911. In addition to the number in the 1911 list two Muhammadan castes, Hammal and Sikligar (the latter's business is to sharpen weapons), have been returned. Besides these, among the castes of Hindus, returns have been found under 4 main separate castes for which there were no figures in the previous Census. Of these, the Goli or Salt-maker with a strength of 2,730 and Koli with 51,190 rank among the important castes of the State. Kolis and Koshtis being two allied castes, the Kolis, sometimes known as Koris, are stated to have been included among Koshtis in the Census of 1911. But as the figures for Kolis and Koshtis of the present return being added together, show an increase of above 68 thousand from the very small number of 422 Koshtis returned in 1911, there is no doubt that the majority of Kolis and Koshtis were wrongly returned in 1911. There were nine thousand Golis in 1901 but not a single Goli was returned in 1911. The Hindu Bohras and Kanjars are also accretions in the present list absent from the list of 1911. These point to the wrong and in-accurate returns of castes in that Census. As the names returned, this time, tally with those of 1901 with usual variations here and there in strength only, there can be no doubt that the present return of names is more near precision and accuracy than that of 1911.

133. In the Subsidiary Table I, the various castes have been classified under 33 main occupational "groups." The Table will show that there are 8 groups the strength of which varies from 125 thousand to above 7 hundred thousand. The remaining 25 groups have population ranging between 1 thousand and 75 thousand including a group of small castes classed under the general name of "others".

Classification of Castes.

The largest group is that of the cultivators which contribute nearly 22 per cent. of the total population. There are altogether 12 castes included in

this group of which Kachhis are the most numerous with a population of 168 thousand. The group of the Leather workers or Chamars comes next in numerical strength, Chamars the only caste in the group forming 12 per cent. of the total population. The next group, namely, the Priest group, consisting of two castes only, Bairagis and Brahmans, gives 10 per cent. of the total population of which the Brahmans number almost 90 per cent. of the group total. The Land-holders group, which ranks 4th in point of numerical importance, has no other than the Rajput population. The different septs of Rajputs contribute more than 249 thousand persons. The 5th group, that of Graziers and Dairy-men, numbers 213,000 persons of whom 60 per cent. are Ahirs. The forest hill tribes, hunters and fowlers numbering in all 184 thousand come next in order. There are altogether 9 tribes included in the group of which Bhil, Bhilala, and Saharia together form nearly 82 per cent. of the group total. Within the group, Bagri shews some figures next to the three tribes stated above; the strength of other tribes is practically nil. The Village Watchmen and menials come 7th in point of strength, there being 133 thousand persons. Balais form the majority in the group contributing 91 per cent. of the group population. The group of traders and Pedlers numbering 125 thousand mostly consist of various Bania castes. Then come all those groups of smaller strength such as Weavers, Carpenters, Potters or Kumhars, Oil-pressers or Telis, Barbers or Nais, Fishermen, Boatmen and Palanquin bearers, Lohars, Writers, Sweepers or Bhangis, Gold and Silver smiths or Sonars, etc., in order. Lastly follows the group of "others" under which are classed persons of casteless religions such as Christians, Aryas, Sikhs, Parsis, Budhists, Jews, various castes of minor importance of Hindus and Musalmans and all those tribes and castes which have no fixed occupation numbering in all 206 thousand persons.

*Diagram showing the comparative strength of
—:Some of the main castes:—*

**Variations
Since 1911
Among the
Various Castes.**

134. From the Subsidiary Table II, it will be seen that most of the high castes are decadent especially those of the Hindus. The Brahmans have decreased by 7·3 per cent., the Rajputs by 14·6 and the Kayasthas by 15·3 per cent. Of the Brahmans, Bhagor, Sanadhya, Sarwaria and Sri-gaud show the greatest fall. Among the Rajputs, abnormal decrease is found in the three septs, Sendhos, Ponwar and Parihar. Of the Banias which show a decrease of 3·7 per cent., the Jain Bania population remains stationary, it is the Hindu Banias who have decreased in number. The Bairagi which draws population from all castes, shows an increase of 74·4

per cent. this time from the previous Censuses. In the lower class, with the exceptions of Ajna, Khatik, Rawat and Sutar which show an appreciable decline, other castes have more or less increased during the decade. Of the low castes of high strength such as Chamars, Kachhis, Balais, Kolis and Sondhias, Balais have the highest increase, the figures rising from 47 thousand in 1911 to the incredibly high figure of 121 thousand. In 1901, there were over 70 thousand Balais, the number fell down to 40 in 1911 and again in the present Census it has abnormally increased. The unaccountable rapid fall in 1911 leads us to suspect the accuracy of the returns of that Census. Of the castes of minor strength of the low classes, Banjaras, this time, give an increase of 238 per mille. Basors show gradual increase from 1901. Banjaras were confined to Malwa and Isagarh in 1901, but they are now found all over the State.

The Animistic races Bhil, Bhilala, Kirar and Mina etc. have multiplied greatly during the decade. The number of Animists who have been returned as Hindus is less than that of 1911. Of the 231 Kanjars returned at the present Census nearly 150 are reported to be in the Lashkar Jail. They are a criminal tribe of vagrant habits. Of the same class of tribes Moghia, Khangar, Bagri, Sansi etc., are found in the return of every Census.

Among the Muhamadans, Shaikh, Pinjara and Bohra show some increase. Mewatis, a good many of whom are employed in the Scindhia Army, show a decrease of 1 thousand.

The Saiyads remain stationary but the Pathans, also a high class Muhamadan, have decreased slightly.

135. The marginal table shows the strength of the castes which may be

considered to belong to the category of "Depressed Classes" in the Gwalior State. It is very difficult to say who should come under the Depressed Classes. In the Hindu hierarchy of caste there is no such expression as Depressed Class. The term originated with the social reformers. The list has been framed on the basis of current notion

**Depressed
Classes.**

among high class Hindus and includes a medley of castes which are regarded depressed on account of their having no opportunities to improve their material and moral condition or to rise in the social estimation of the public. In Gwalior, the total strength of the Depressed Classes, in this sense, is more than 1 million or about 1/3rd of the total population. Education which alone can raise aspirations and a desire for a higher status in society is almost nil among these people. They are quite content with their lot and take it as a Divine dispensation which on one can alter. Hence, there is no Depressed Class Movement here as there is in some parts of British India. There is no objection, however, in the State, to the admission of low caste children, excepting Mehtars, into the Schools that generally exist for high castes. Some years ago a separate School for Depressed Classes was started at Lashkar but it died on account of very poor attendance. Recently its name

has been changed but it yet admits and has on the roll some Koli and Chamar boys sitting side by side with Brahman and Bania boys.

The list, as will appear, contains on the one hand, the untouchable Bhangi and on the other, Kahar, Bhoi, Kachhi etc., whose water is taken by all the twice-born castes except some sects of orthodox Brahmans. Pollution by proximity is unknown in the State, as has already been mentioned in the Chapter on Religion. That by touch applies only as regards Mehtars, Chamars and Balais.

Aboriginal Tribes.

Bhil	71,295	Mina	65,304

TOTAL			294,082				

136. The aboriginal tribes of the State have been dealt with in the Chapter on Religion. The marginal table shows the strength

of each.

Criminal Tribes.

137. Central India was once known in history to be the resort of criminal tribes. But many of these have now adopted settled life and taken to peaceful avocations. Yet there are some tribes, Moghias, Bagris, Sansis, Kanjars, Khangars and Sondhias in all 93,782 strong which are supposed even now to 'live upon the community'. The Darbar have instituted an enquiry to settle which tribes should be regarded as, "Criminal Tribes" in the State. But at present Moghias and Bagris are the two proclaimed criminal tribes. For them, a School has been started by the State in the Moghia Colony at Mirkabad (near Mungaoli) in the district of Isagarh where along with ordinary courses of primary education given to the boys and girls, music is also taught with a view to appeal to their good sense. In short, every effort is being made by the State to turn the Moghias and Bagris to useful citizens.

1. The figures for 1911 and 1901 are not comparable with the figures of 1921 as they are exclusive of Feudatory Estates and British Cantonments etc.

2. Castes having their strength less than two per mille have been omitted from this Table.

CHAPTER XII.

OCCUPATION.

138. The present Chapter treats of the subjects which come under the head of occupation and industries.

139. The statistics regarding the occupation of the population of the State will be found in Tables XVII—XXI and the nine Subsidiary Tables annexed to the Chapter. The corresponding tables of 1911 are Table XV with its five Parts A, B, C, D, E, and Table XVI.

Reference to
Tables.

Table XVII is a general table of occupation or 'Means of livelihood' in which the figures of the whole State and the districts, both, have been exhibited.

Table XVIII deals with the subsidiary occupations of agriculturists (actual workers only) and is divided into three parts:—

- (1) Rent-receivers.
- (2) Rent-payers.
- (3) Farm servants and field labourers.

Table XIX shows for some mixed occupations the number of persons in each district who returned each occupation as their (a) Principal, (b) Subsidiary means of livelihood.

Table XX exhibits the total number of actual workers and dependants in the State who follow different occupations by main religion.

Table XXI gives the statistics for the occupations of certain selected castes, tribes and races.

The more important features of the statistics are presented in the Subsidiary Tables in a more compendious and easily intelligible form than in the tables above referred to.

Subsidiary Table I.—General distribution by occupation.

Subsidiary Table II.—Distribution by occupation in Natural Divisions.

Subsidiary Table III.—Distribution of the agricultural, industrial, and professional population in Natural Divisions and Districts.

Subsidiary Table IV.—Occupations combined with agriculture (where agriculture is the subsidiary occupation).

Subsidiary Table V.—Occupations combined with agriculture (where agriculture is the principal occupation).

Subsidiary Table VI.—Occupation of females by sub-classes and selected orders and groups.

Subsidiary Table VII.—Figures in the selected occupations of 1921 compared with those of 1911 and 1901.

Subsidiary Table VIII.—Occupations of selected castes.

Subsidiary Table IX.—Number of persons employed on Railways and in the Postal, Telegraph and Irrigation Departments.

The informations about factories in the State are contained in Table XXII and the Industrial Subsidiary Tables, eight in number.

Table XXII is divided into as many as seven parts. Part I gives a State summary of industrial statistics. Part II exhibits the distribution of industries by districts.

Part III classifies the Industrial Establishments according to the class of Owners and Managers.

Part IV shows the caste or race and birthplace of skilled work-men classified according to their industry and occupation.

Part V gives the caste or race and birthplace of unskilled labourers classified according to the industry in which they are working.

In Part VI is to be found the description of the power used in Industries whether Steam, Oil, Gas or Electricity. In the case of electric power it gives a further information whether electricity is generated in the premises or not.

Part VII shows the number of looms in use in the textile establishments.

The Industrial Subsidiary Tables give the statistics of Industries in a more concise and broader form. They deal mainly with the figures of those industries where 20 or more persons are employed.

**Accuracy of
the Return.**

140. The system of classification of occupations adopted in the present Census is founded upon the same scheme of Mr. Bertillion, the head of the Statistical Bureau of Paris, which was taken in a modified form in the Census of 1911 and adapted to the requirements of the Indian Census. No radical change has been made on the present occasion in the form of 1911, only a few of the groups (*i. e.*, textile groups and groups of labourers) have been sub-divided so as to give greater detail without destroying the comparative totals. In the present system there are four main classes, 12 sub-classes, 56 orders and 191 groups. A few of the orders and groups have been split up into two or more to exhibit separately the figures of some of the minor occupations or aggregate of occupations which have some local interest or importance. One order has been added to the number of 1911 under which are grouped together all those persons whose industries are non-productive and cannot be classified in any of the unproductive groups of the list.

The occupational entries have been, in all Censuses, a source of puzzle to the enumerators and the occurrence of incorrect returns, in spite of great caution and complete instructions, could never have been avoided. To obviate, as far as possible, the inaccurate and incomplete entries in columns 9, 10 and 11, the enumerators were not only sufficiently instructed but were also tested by examination to elicit true and correct returns. They were specially advised not to write such vague terms as 'Mazduri,' 'Naukri' or 'Dukandari' but to enter the exact kind of labour or service and nature of the goods sold. Where a man has two occupations, the principal one or the one on which he relies most and from which he obtains the major part of his income was to be entered as his principal occupation in column 9. Only one subsidiary occupation, the important one, was told to be entered in column 10. Dependants were to be entered in column 11 under the occupation of the principal worker.

But accurate returns of occupation are too much to expect and notwithstanding elaborate instructions, strict supervision and checking, mistakes, which the enumerators are apt to commit in occupation columns, though fewer this time, have been found in the schedules here and there.

Most of the errors found were due to want of precision and completeness of returns. Thus, simply, the word 'Overseer,' in column 9 does not distinguish whether the person is an Irrigation Overseer or a P. W. D. Overseer. Similarly 'Dukandari,' 'Saudagiri' fail to describe the kind of articles in which the persons deal. The ambiguous terms 'Coolie,' 'Contractor' and 'Naukri' though rare were not altogether absent from the schedules of the present Census. The words 'Naukri Fauji' should have been supplemented by another term to indicate whether the person is in the State or in the Imperial Service Troops,

Another class of error was due to concealment of the principal avocation on the part of the persons enumerated. Thus, many of those persons, locally termed as Joshis, live practically on begging but as all of them have returned themselves as astrologers, they have gone under Group 179 instead of 189, meant for beggars, etc., to which at least some of them certainly belong.

Entries of peculiar occupations such as 'Kamarferna' or carriers of water from the Ganges were not only incorrect as these works occupy but a small portion of the time, during the year, of those returned as such, but also a source of perplexity in the matter of classification. There were no other errors of a serious nature except those committed in some moot points and those common errors to which many of the enumerators are subject. The standard of accuracy attained by the enumerators at this Census seems to be in advance of that in the previous one and the figures, with a little allowance, may be accepted as correct and reliable. The slip copyists copied whatever were in the schedules under the general supervision of the Tabulation Superintendent. In the process of sorting, schedules were referred to whenever any unintelligible entry appeared.

141. All attention was paid to obtain a correct classification of the entries. The note, containing the important principles to be followed in classifying the detailed occupations and an alphabetical index of occupations with group number attached to each, sent by the Census Commissioner for India, was of much value in the matter of classification. The difficulties arising from the separation of manufacture and trade have been surmounted easily this time with the help of the note. In the case of vague entries such as makers of bangles, weavers, classifications have been made according to the conditions prevailing in the locality from which the entries came. Thus, Bangle-makers in the district of Mandasor have all been classified in Group No. 53—(makers of glass bangles, etc.) as, of the two kinds of bangles, lac and glass manufactured in the State, Mandasor deals exclusively in glass bangles. Indefinite return as Overseer from the Parganas where there is no Irrigation work has been thrown in Group 111, there being two classes of Overseers in the State, Irrigation and Roads and Buildings Overseers. Unspecified and ambiguous entries such as contractor, coolie, etc., whose suitable classification seemed to be impossible have been placed in the different groups of order 53.

**Classification
of Entries.**

General Statistics.

142. The State is mainly agricultural. Of the total population more than

DIAGRAM SHOWING THE DISTRIBUTION OF THE POPULATION BY SELECTED OCCUPATIONS (ORDERS)

66 per cent. are dependant on "Pasture and Agriculture" of which pasture or "Raising of farm-stock" supports only one per cent. The remaining 34 per cent. are engaged in all other occupations combined. The preparation and supply of material substances affords a means of livelihood to 17 per cent. of the total population of whom 11 per cent. are employed in various industries, 5 per cent. only in transport and 5.5 per cent. in trade. Of the 11 per cent. of the total population employed in industries nearly 2 per cent. are in textile, 1 per cent. in wood, 1 per cent. in ceramics and 3 per cent. in industries of dress and toilet. About 4 per cent. are in 'Public Administration and liberal arts' and 13 per cent. in miscellaneous occupations consisting of 'Domestic Service,' 'Insufficiently described occupation' and 'Unproductive professions,' etc.

If we compare the general distribution with that of 1911, we find some notable variations in the proportions of the population engaged in various occupations. Thus, there has been an increase in the proportion of population engaged in Pasture and Agriculture from 6,299 to 6,645, an increase in the proportion of exploiters of minerals from 3 to 5, an appreciable decrease in the number occupied in textile industries, trade in metal, trade in food-stuffs, professions and liberal arts; but the essential features of the distribution of employment have not altered. The important difference in the proportions between the two Censuses will be discussed hereafter.

Natural Divisions.

143. Turning to the Natural Divisions, the Hilly tract shows the highest

DIAGRAM SHOWING THE DISTRIBUTION OF THE POPULATION BY OCCUPATION (CLASSES) IN EACH NATURAL DIVISION.

figure for agriculture, 76 per cent.; the Lowlying area, 67 and the Plateau, 65. The Lowlying containing the premier District Gird, has the highest percentage in profession and liberal arts. Trade and transport occupy the same proportion in the Lowlying area and the Plateau. The industries employ the highest proportion in the Plateau.

144. The functional distribution by religion is shown in Table XX. In the case of Hindus and Animists the proportion engaged in agricultural pursuits is higher than that of the State but as regards Muhammedans, Jains, Christians, etc., it is far below the average. Of the Animists, the proportion which follows non-agricultural pursuits is only 28 per cent. or 5 per cent., if we omit persons whose occupations fall under the head "miscellaneous." Of the 5, one is engaged in Industry, 3, in Trade and nearly 1, in the Army. As 'pasture and agriculture' is the occupation of the Animists, so is trade the calling of the Jains. More than 72 per cent. Jains are engaged in trade alone. Pasture and Agriculture contains 13 per cent., Industry 5 per cent. and Public administration and liberal arts, a few. The Muhammedans of the State are more fairly distributed over the different kinds of occupation than the people of other religions. They take more to industry, trade, military service and the professions than the Hindus. Of the Hindus, 11 per cent. are in industries, 4 per cent. in trade and only 3 per cent. in public administration and liberal arts. Majority of the Christians are in the army and professions. Some are in trade and commerce but in agriculture there is almost none.

Distribution by Religion.

145. Subsidiary Table VIII will show the extent to which the main castes still follow their traditional occupation. It is worth noticing that some of the highest and best known castes have almost completely abandoned their traditional occupations. Thus more than $\frac{2}{3}$ of the Brahmans and $\frac{3}{4}$ of the Rajputs have taken to agricultural pursuits. There are variations in the extent to which the various sub-castes of Brahmans follow their original occupation. One-fourth of the Dakshani Brahmans are still priests and very few of them are in connection with pasture and agriculture, while most of the Sanadhya Brahmans are agriculturists. Compared to Brahmans, Marathas and Rajputs, the Kayasthas are yet faithful to their occupation. Forty-two per cent. of them are writers. Marathas, who are by tradition soldiers, are distributed over various kinds of occupation and can, under the present circumstances, no longer claim the military calling to be their principal means of subsistence. The Jain trading caste and the Hindu Vaishyas, on the other hand, still adhere to their occupation. About $\frac{2}{3}$ of the Hindu Vaishyas have been returned as traders, while Jains in the State are either traders or persons living on their own income. But the castes whose traditional occupation is agriculture have scarcely deserted it for other means of livelihood. Thus, almost all the Ajnas and most of the Animists are dependant on agriculture. Some of the Hindu Bhils and a number of Saharias have been returned as ordinary labourers. It is noticeable that agriculture has drawn away most of the low classes who have abandoned their traditional callings. Half the number of Chamars and Telis are cultivators or field labourers. Chamars in Gwalior seldom follow their original occupation. Quite a number of them work as masons. Whatever Europeans and Anglo-Indians there are in the State, are either in the Army or in the Public Administration.

Occupation by Caste.

146. Before proceeding to deal with the occupation under each sub-class in detail, it is necessary to state that comparison of the figures of the present

Census with those of 1901 and 1911 has been rendered difficult and some times impossible owing to the present figures being inclusive of the returns from the Feudatory Estates which now form an inseparable part of the parent State. In the Subsidiary Table VII appended at the end of the Chapter, comparison has been made on the actual, unadjusted figures of each Census. So it is not safe to accept the figures for the percentage of variation, given in columns 5 and 6 of the Tables, as representing in all cases the actual state. In the majority of cases, proportionate figures will be taken for comparison though at times the comparative figures will be referred to in those occupations to which the feudatories contribute but very little. For the treatment below, the tables for reference principally are, Subsidiary Tables I, IV, V, and VII.

Agriculture.

147. "Ordinary cultivation" supports nearly 65 per cent. of the total population. Of the 65 per cent., 3 per cent. only are landlords, nearly 54 per cent. ordinary cultivators and 8 per cent. are farm servants and field labourers.

There are some agents or managers of landed estates, etc., but their number is very small. Agricultural population which chiefly represents the cultivating class has been increasing since 1901 and this is certainly a hopeful sign. The proportion of cultivators to the total population was only 44 per cent. in 1911 and in 1901 it was still lower.

The percentage of landlords has also increased from 1911, in which Census there was a large fall in this group from the previous figure of 1901. Though the present figure is inclusive of feudatories it shows a diminution of 19 per cent. in the land-holders group from 1901. The high figure of the latter Census was due to many cultivators with small holdings having been returned as "rent receivers" or landlords.

A large decrease from 1911 is seen in the group of farm servants and field labourers. The reason is, that the last decade being one of great economic strain, many of the field labourers have migrated to towns and centres of trade and industry where owing to the rise of wages they earn more as labourers than as field-servants. As the vast culturable land of the State, in order to be utilized, are being leased out for cultivation for definite terms of years, some of these field labourers may have thought more profitable to take leases or sub-leases on nominal rents for themselves than to work in the field of others.

Forestry

148. Since the reservation of the Forest tracts prior to 1911 by the State, there has been a gradual fall in the number of wood-cutters, etc. A new return of 237 persons under Group 10 of lac collectors suggests that the business of lac, which has every future in a State like Gwalior, one-ninth of whose area is covered with forest, has been taken up by some persons.

Raising of Farm Stock.

149. Only 1 per cent. of the total population has returned raising of farm stock as the principal occupation. The Group 11 of cattle and buffalo breeders and keepers, does not seem to represent correct figures as some of the large cattle breeders are also cultivators and it might not be easy for them to say which brought the maximum income. A considerable decline is seen in the number engaged in raising animals since 1901 and it is more so when we consider that the present figure is inclusive of the feudatories.

Sub-Class II— Exploitation of Minerals.

150. Only 1,622 persons have been returned as employed in the exploitation of minerals. The State has numerous and extensive deposits of building stones and lime-stones. Both these deposits occur almost in every district. In addition to these there are quarries of red ochre and yellow ochre and

chalk. Work in quarries is one of the common subsidiary occupations of cultivators. Over and above the 396 persons whose main occupation is work in hard rocks there seem to be employed a multitude of people in the quarries. Some of them whose principal occupation is exploitation in quarries of hard rocks might have been returned under Stone cutters, etc. (Group 87).

A Mining Department has recently been started with a Mineralogical expert at the head. It is now that an attempt will be made to secure an income for the Government from the vast mineral resources of the State.

Subsidiary Table IV gives occupation with which agriculture is combined as a subsidiary means of livelihood and Subsidiary Table V gives under a few main heads the details of the subsidiary occupations followed by the landlords, rent-payers and farm servants and field-labourers (whose principal occupation is agriculture). In the above two tables the figures for the actual workers have only been dealt with; dependants being left altogether out of account.

151. About 3 per cent. of those whose principal means of livelihood was non-

agricultural returned themselves as "Partially agriculturists." The proportion of partially agriculturists on the total number of actual workers is highest in the Lowlying division and is lowest in the Hilly, the population of the Hilly tract being almost wholly agricultural. The proportion of 'partially agriculturists' is by

Where
Agriculture is
the Subsidiary
Occupation.

far the higher in the case of every non-agricultural occupation, in the Lowlying than in the Plateau area. Hence the State average always falls below the percentage in the Lowlying. In the margin are given 2 tables, one for the State as a whole and the other for the Lowlying division in which tract there is the greatest connection of industry, trade and other non-agricultural occupation with the land.

In the State as a whole, the proportion of partial agriculturists is the highest in the occupation of the exploitation of minerals. Next to the workers in mines, the persons engaged in industries are most often partly dependant on agriculture. Under industries, the general proportion comes to 169 but this average is exceeded in the case of 'Dress and Toilet,' 'Wood' and 'Textile.' In the Lowlying section the proportion of persons with agriculture as their subsidiary occupation is highest of all other occupations in the Dress and Toilet industries. Of those occupied in fishing and hunting 21 per cent. are partially agriculturists. In the Lowlying the proportion is 27, in the Plateau it is only 22. Trade in foodstuffs is closely connected with land and here, as elsewhere, persons in sub-class 9 (profession and liberal arts) invest money in land.

livelihood but is done as a subsidiary occupation with cotton weaving. It is because of this that no separate return as silk weavers has been made this time. Those who occasionally weave silk, according to the demand, have been returned as cotton weavers, cotton-weaving being their main occupation. Thus silk-weaving, as a distinct occupation, has no existence in the State and the famous silk industry of Chanderi has dwindled down. Factory statistics show that 117 persons are employed in Cotton Ginning and Pressing factories and 1,811 persons in Cotton Spinning and Weaving factories, which give in all nearly 2,000 persons as engaged in Cotton factories. Though the figure is yet small as compared with the total number engaged in the Cotton industries (nearly 45,000 persons) there is no doubt that many home weavers, no longer finding it profitable to carry on their business in small scale, are abandoning their original occupations. Every group under textile shows decline more or less. Weaving of woollen blankets and Dyeing and Bleaching of textile, which were two profitable occupations in the past also show a diminution in the number of persons following them.

154. The proportion of persons engaged in this industry has had a rapid rise during the decade. It supports more than 28,000 souls. The State maintains a well-equipped Leather Factory and Tannery. The Tannery is fitted with modern, up-to-date machinery and the work of tanning is conducted in the latest scientific process.

Hides, Skins, etc

155. It is one of the most important industries and supports no less than nearly 35 thousand persons. An increase in the number of those occupied in this industry is continuous since 1901.

Wood.

156. Of the increase of actual workers in the Metal Industry from the proportion of 24 to 36, the greatest increase is found in Groups 49 and 50 (workers in copper, brass and other metals except precious ones). Makers of arms and guns also show a rise.

Metals.

157. Ceramics support 29,000 or 1 per cent. of the total population, more than 26,000 of whom are potters. The decrease since 1911 in the number engaged in ceramics as shown in Subsidiary Table VII is very doubtful and is probably due to wrong classification in 1911. The Pottery Works in Lashkar, the first of its kind in India where crockery is turned out, never engaged so many as 31,000 persons (the return of 1911). The present figure 119 seems to be a possible number employed in it.

Ceramics.

158. Of the 8,000 persons supported by this industry more than 5,000 are engaged in refining vegetable oils, the oil-pressers falling under this head. The scent and perfume sellers have increased but a great diminution has taken place in the number of refiners of vegetable oils.

Chemical Products.

159. Flour-grinders (2,449) and Sweetmeat-makers (5,108) are the two numerically strong groups in the Food industries of the State. The number of actual workers engaged in Breweries and Distilleries has declined from 138 in 1911 to 88 in the present return. Manufacturers of tobacco, opium and Ganja have also considerably fallen since 1901.

Food Industries.

160. The returns of 1911 under these industries are also very doubtful. If the figures of 1911 were right, tailors, shoe-makers, etc., would immensely decrease in number, which is contrary to expectation.

Industries of Dress and Toilet.

161. Some 251 persons have been returned for the first time in this Census in Group 83 of Cabinet-makers, Carriage-painters, etc.

Furniture.

Building Industries.

162. Some 13,420 persons are engaged in this industry. Some of those, employed in quarries of hard-rocks may have been classified as stone cutters and dressers (under Group 87).

Transport.

163. The return under Sub-class IV (Transport) is of doubtful accuracy. The figures obtained from the Irrigation and Postal Departments do not tally with those in the occupational tables compiled from the ordinary schedules of the Enumerators. Works are being done in connection with quite a number of Irrigation schemes laid out by the Darbar. Altogether 2,500 persons have been reported to be in the Irrigation Works of the State. Of these more than 500 are servants of the State and nearly 2,000 including coolies are contractors and their employees.

The Postal, Telegraphic and Telephone Departments return shows that 1,380 persons, in all, are engaged in the three departments in the State. Excluding 116 persons employed in the signalling establishment all of whom are Railway servants and shown separately with the Railway figures and 63 and 155 persons in the Postal and Telegraphic Departments respectively who work in addition to other more important duties as School masters or Railway Station masters and returned under those heads, there remain 1,046 persons engaged in the departments who ought to have been classified under the head Post Office, Telegraph and Telephone services (Order 23).

Hence 415 persons shown engaged in the Post offices, etc., do not represent the actual fact. The 1911 figure also seems to be unreliable. In spite of omissions of this nature the figure for transport shows an increase from 12,000 in 1911 to more than 18,000 in the present Census. The greatest increases are found under 'Transport by road' and 'Transport by rail.' Under Group 113 (persons excluding servants connected with mechanically driven vehicles) 744 persons have been returned for the first time in the present Census.

Sub-Class V.—Trade.

164. Of the 177,000 persons supported by Trade more than 82,000 or nearly half are traders in food-stuffs. Increases are seen under the heads, 'Bank establishments of credit, exchange and insurance,' and 'Brokerage, commission and export' as due to the order of the day. Itinerant traders, pedlars, hawkers, etc., have also risen considerably during the decade.

Sub-Class VI.—Public Force.

165. About 23,000 persons are in the Military service, 1,600 being in the Imperial service troops.

Sub-Class VII.—Public Administration.

166. In the various groups of Public administration, there are nearly 38,000 persons of which more than 31,000 are State servants and only 68 are chiefs and their families.

Sub-Class VIII.—Professions and Liberal Arts.

167. The professions employ nearly 41,000 persons. Religion has suffered a decrease but Law, Medicine and Instruction each shows an increase in the number engaged. The decline under the head Letters and Arts and Sciences is unaccountable.

Sub-Class IX.—Persons Living on Their Income.

168. The proportion of persons in this class has risen from 12 in 1911 to 14 in the present Census per 10,000.

Sub-Class X.—Domestic Service.

169. There has been a decrease in the number of those occupied in domestic service as might be expected. The rise of wages and the different avenues of employment open to the workers are responsible for this.

Sub-Class XI.—Insufficiently Described Occupations.

170. The high number classified under this order is due to the fact that many returned their occupations in such indefinite terms that their suitable classification was out of the question. Of the 272,000 under this head, 245,000

are labourers, 19,000 Cashiers, Accountants, Book-keepers, Clerks, etc., and nearly 7,000 are manufacturers, business-men, etc.

171. The continuous decrease since 1901 in beggars, vagrants, prostitutes and other non-productive occupations (sub—Table VII) is a good sign.

172. In every 100 persons, there are 61 workers and 39 dependants in the State as a whole.

In 'Pasture and Agriculture' the proportion comes to 67 workers and 33 dependants. In the Lowlying division, the proportion returned in 'Agriculture' is higher than the average by 3 in the case of dependants. In the Plateau, it is equal to the State average but in the Hilly tract the proportion of dependants is much lower than the general average, there being only 27 dependants against 73 actual workers. In 'Fishing and hunting' there are as many workers as dependants but in the 'Exploitation of minerals' the proportion of workers to dependants is nearly the same as is in the general population.

In every 100 persons supported by industries, there are, in the State

Percentage of workers and dependants.	Workers.	Dependants.
Production and transmission of physical forces.	61	39
Furniture industries ...	57	43
Food industries ...	55	45
Textile ..	54	46
Construction of means of transport.	54	46
Miscellaneous undefined industries.	54	46
Chemical products properly so called and analogous.	52	48
Metals ...	51	49

as a whole, 51 workers and 49 dependants. But the proportion of actual workers is larger than this average in the industries noted in the margin. Subsidiary Table I will show that with the exception of Textile Industry, the number of persons engaged in each of these is

smaller than in other popular industries such as Dress and Toilet, Hide and Skins, Ceramics, Wood, etc. In some of these such as 'Production and transmission of physical forces,' Furniture, Chemical products, etc., hardly one person is supported out of 10,000 of the total population. In furniture-making, a new industry in the State, there are only 43 dependants as against 57 actual workers.

In the Lowlying area the proportion of dependants in industries is 3 less than the general average on the total population, but in the Plateau and Hilly tracts it exceeds the average.

The number of actual workers to dependants in 100 persons is almost the same in commerce and professions in the State as a whole, the proportion being 47 workers to 53 dependants. There is slight difference only in the ratios of the two natural divisions—the Lowlying and the Plateau. The proportion of dependants in the Hilly tract, in occupations other than agricultural, is always greater than in the other two divisions. In commerce, the Lowlying has as many dependants as actual workers but in the Plateau the proportion of dependants is larger by 3 than that in the former. In the Professions, on the other hand, the Plateau division has lesser dependants than the Lowlying by 1 in 100 persons supported in each case.

**Sub-Class XII—
Unproductive.**

**Workers and
Dependants.**

Agriculture.

**Commerce and
Professions.**

Miscellaneous Occupations.

The lowest proportion of dependants, as might be expected, is found in Unproductive, Insufficiently described and other miscellaneous kinds of occupations.

Female Occupations.

173. In the State as a whole, amongst 100 actual workers more than two-thirds (72 per cent.) are males and less than $\frac{1}{3}$ rd (28 per cent.) are females (Subsidiary Table VI).

There are some occupations in which women have a monopoly while in others they work as helpers to males. Thus, in field labour, wood-cutting, cotton-spinning, rope and other fibre making, wool-carding and spinning, butter, cheese and Ghee-making, baking and biscuit-making, females are very much in excess of males. While in other occupations such as those connected with fuel, washing and cleaning, sweeping, labour in connection with railways, Irrigation Works, and some food industries the number of women workers engaged in each is not small.

Factory Statistics.

174. The last decade has seen the inauguration of some industries within the State, still there are few, as yet, to speak of. In the previous Censuses, no information was collected separately on Industrial Schedules of the Owners, Managers, Supervision Staff and Operatives. The general schedule used did not distinguish between workers in factories and those engaged in home industries and that between Managers, Supervisors and other employees. Thus, no estimate can be made of the progress in industrial development during the decade. Neither it would have been profitable to do so considering that the era of industrial movement conducted on the modern economic basis has but just commenced. The State is known to be endowed with rich and abundant resources in agriculture, forests and minerals but as little has, so far, been done to exploit these resources and turn them to our use, it is premature to conclude anything from the existing facts and figures. It will be for the future statistician and the superintendent to judge of the progress made, suggest the particular industries to the development of which we should restrict ourselves and indicate lines on which our industrial movement should be conducted.

175. According to the Census definition of factory, which refers only to those concerns in which 10 or more persons are employed, there are altogether 39 industrial concerns in the State employing about 5,000 persons or about 15 per 10,000 of the population. Of these, 29 are textile and connected industries and the remaining 10 are industries other than textile. Among the total number of persons engaged in industries 3,302 or more than $\frac{3}{4}$ th are in the textile industries, a little less than $\frac{1}{5}$ th in Metal Industries, and the remaining few in other industries of various types. As textile and connected industries are of great local importance, we shall mainly classify our industries into two divisions, textile and non-textile. With the exception of one Flour Mill at Ujjain all the non-textile establishments are in the district of Gird-Gwalior and more particularly in Lashkar and its vicinity.

Of the 10 non-textile industries six are financed by the Darbar either directly or indirectly. As the public have not yet been convinced of the prospects of non-textile industries to the same extent as of the textile industries, the potentialities of which are undisputedly enormous in the State, it is fit that the former class of industries should be maintained and controlled by the Darbar in their infant stage so that their success may ultimately lead to the

investment of private capital in them. Besides the six non-textile establishments, three others, the Cotton Weaving, the Wool Weaving and the furniture industries carried on in the Central Jail, Lashkar, are owned by the State. But as these are conducted in one establishment they have been taken as one industry and shown as such against Cotton Weaving Industry.

Of the 29 textile industries, only 3 are in Northern Gwalior, 2 being in Gird, 1 in Bhind and all the remaining 26 are in Malwa, Ujjain having 16; Mandasor 6, Shajapur 3 and Amjhera 1. Malwa being rich in cotton, these industries have been started with the idea of getting an abundant supply of raw cotton from the locality.

All the textile establishments, with the exception of two cotton weaving industries, one in the Central Jail as stated above, and the second, a concern of a Registered Company, are owned by private individuals who are all Indians. There are only 3 industries, the Metal Works, the Ayurvedic and Unani Pharmacy and the Motor Works, which are owned by Registered Companies.

176. Altogether 11 Europeans are engaged in the different departments of industries in the State, and these Europeans are either on the managerial or supervisional staff. There is no European in the Clerical or in the Operative Section. There are only 3 industries each of which is managed by a European. They are (1) Workshop, (2) Oil and Soap Factory and (3) Motor Works. In the supervisional staff of the last two, are engaged 8 Europeans. With the exception of these 3, the industrial concerns in the State are all run purely with Indian Staff.

Europeans in Industries of the State.

177. In the textile industries, the number of skilled workmen employed is nearly treble that of the unskilled, whereas in the case of non-textile industries, it is six times that of the unskilled. There are very few females in the industrial concerns. Whatever females there are, are mostly engaged in the textile industries. Thus of the 393 adult females engaged in the textile, leather, chemical and food industries, 359 are in the textile alone.

Labour.

The number of skilled female workmen is slightly greater than that of the unskilled. Leaving aside the 4 employed in the Leather Factory at Morar, all the skilled female labourers are found in the textile industries.

Child labour is practically nill in the industries carried on in the State. Altogether 69 children work in the factories, of which 38 are attached to the textile and the remaining 31 in the Metal Industries.

More than $\frac{1}{3}$ rd of the skilled labour is supplied from territories outside the State. Though the majority of the skilled workmen belong to the State, the districts of employment provide but a small fraction of it. A good number of them come from the adjacent districts surrounding Ujjain. Immigration of labour takes place from the outlying Provinces and States and remote Provinces such as Bombay, Baroda and others contribute scantily to the man-power of the textile industries in Malwa (Ujjain).

As for unskilled labour, it is for the most part recruited from the locality. Some outsiders no doubt come to seek employment but their number is not very high.

178. Steam and electricity are the two kinds of mechanical power used in 33 factories out of a total of 39. Steam is used in almost all the textile industries. It is also used in the Oil and Soap Factory (Lashkar) and in the Flour Mill at Ujjain. In the four industries, the Printing Press, Leather

Power.

Factory, Pottery Works and the State Workshop where electric power is used, in every case it is supplied from without the premises.

Before passing to other topics it will do well to mention here that the Industrial Statistics gathered do not pretend to be fully accurate. As this is the first time that they have been separately collected on special schedules, it is very probable that a few of the concerns have been omitted from the record.

**Mobility of
General Labour.**

179. Industrial concerns in the State have not flourished to such an extent as to crush altogether the rural home producers in the open field of competition. What for a fondness for home and what for the want of initiative, home producers have neither altogether given up their occupation in favour of other lucrative ones outside, nor have they improved the methods of work but with the growing rise of prices and the breaking down of the self-sufficiency of villages, they are gradually falling behind in the struggle for existence. As a result of this tendency, some of the classes have already forsaken their primitive callings while others vacillate between old cottage industries and general labour or agriculture as occasion suits. It is the agricultural labouring class which has been doubly profited by the rise of wages on the one hand and the increase of prices for agricultural products on the other. The remunerative employment in big towns and cities has tended to draw its members from rural areas and on the other hand high prices secured for agricultural produce have encouraged a number of ordinary labourers in the country to take to agriculture.

**Labour
Combination.**

180. A large part of labour in the State continues still to be influenced by caste sanction and except in the case of big industrial establishments in cities where a bond of fellowship is created the domination of caste does not seem to have given way to any new authority. The Panchayats of Barbars, Kahars, Chamars and other professionals not only decide social questions but also discuss industrial and occupational disputes.

**Economic
Condition.**

181. As has been mentioned before, the agricultural labouring class only

DIAGRAM SHOWING THE RISE OF PRICES
AND THE RISE OF WAGES DURING
THE DECADE ENDING IN 1920

has been profited by the economic changes which the conditions have brought about. The above diagram will show that the wages are no longer compatible with the rise of prices. But some time during the decade (1916-19), rise of wages was higher than the average rise of prices of the staple crops; the surplus which remained after meeting the bare necessities did not go to raise the standard of living of the labourers but was spent, for the most part, in uneconomic items of expenditure, *e. g.*, marriage and other feasts. The primitive Bhil and other hill tribes unaffected by the glamour of modern city and civilization, have, with the rise of their agricultural products, found opportunity to multiply. The only class which seem to have suffered most is the middle class gentry who are out of touch with the counteracting side of the rise of food products and other necessities.

103. Sweepers, scavengers, etc.	6,039	4,705	779
IV.—TRANSPORT	7,775	1,234	691
20. Transport by water	913	128	140
108. Persons (other than labourers) employed on the maintenance of streams, rivers and canals (including construction),	539	4	7
109. Labourers employed on the construction and maintenance of streams, rivers and canals.	346	115	332
110. Boat owners, boatmen and towmen	28	9	321
21. Transport by road	4,949	1,064	215
111. Persons (other than labourers) employed on the construction and maintenance of roads and bridges.	327	227	694
112. Labourers employed on roads and bridges	652	592	908
113. Owners, managers and employees (excluding personal servants) connected with mechanically driven vehicles (including trams).	189	3	16
114. Owners, managers and employees (excluding personal servants) connected with other vehicles.	3,251	135	42
115. Palki, etc., bearer and owners	34	20	588
116. Pack, elephant, camel, mule, ass and bullock owners and drivers.	353	87	246
22. Transport by rail	1,709	42	246
119. Labourers employed on railway construction and maintenance and coolies, etc. porters employed on railway.	52	42	808
V.—TRADE	62,318	22,100	355
24. Bank establishments of credit, exchange and insurance	4,962	1,109	223
121. Bank managers, money-lenders, exchange and insurance agents, money-changers and brokers and their employees.	4,962	1,109	223
26. Trade in textiles	2,810	578	206
123. Trade in piece goods, wool, cotton, silk, hair and other textiles.	2,810	578	206
27. Trade in skins, leather and furs	463	97	210
124. Trade in skins, leather, furs, feathers, horns, etc.	463	97	210
29. Trade in metals	462	198	429
126. Trade in metals, machinery, knives, tools, etc.	462	198	429
30. Trade in pottery, bricks and tiles	131	21	160
127. Trade in pottery, bricks and tiles	131	21	160
32. Hotels, Cafes, restaurants, etc.	1,348	25	19
130. Owners and managers of hotels, cook-shops, serais, etc., and other employees.	141	25	174
33. Other trade in food-stuffs	2,7516	13,278	473
131. Fish dealers	50	31	620
132. Grocers and sellers of vegetable oil, salt and other condiments	10,190	4,259	418
133. Sellers of butter, ghee, milk, poultry, eggs, etc....	1,833	1,514	804

SUBSIDIARY TABLE VI.—Occupation of Females by Sub-classes and selected Orders and Groups.—(concl'd.)

Occupation.	NO. OF ACTUAL WORKERS		No. of Females per 1,000 Males.
	Males.	Females.	
1	2	3	4
V.—TRADE.—(cont'd.)			
134. Sellers of sweetmeats, sugar, gur, and molasses ...	279	24	89
135. Cardamom, betel-leaf, vegetable, fruits and areca-nut sellers.	3,919	3,036	775
136. Grain and pulse dealers ...	8,846	3,200	362
137. Tobacco, opium, Ganja, etc., sellers ...	632	132	209
138. Dealers in sheep, goats and pigs, etc. ...	197	62	315
139. Dealers in hay, grass and fodder ...	1,520	1,020	671
34. Trade in clothing and toilet articles ...	479	156	326
140. Trade in ready made clothing and other articles of dress and toilets (hats, umbrellas, socks ready made shoes, perfumes, etc.	479	156	326
36. Trade in building materials ...	28	17	607
143. Trade in building materials (stones, plaster, cement, sand, thatch, etc.,) other than bricks, tiles and woody material.	28	17	607
37. Trade in means of transport ...	346	11	32
144. Dealers and hirers in mechanical transport, motors, cycles, etc.	1	10	10,000
146. Dealers and hirers of elephants, camels, horses, cattle, asses, mules, etc.	342	1	3
38. Trade in fuel ...	1,838	1,680	914
147. Dealers in firewood, charcoal, coal, cowdung, etc. ...	1,838	1,680	914
149. Dealers in common bangles, beads, necklaces, fans, small articles, toys, hunting and fishing tackle, flowers, etc.	1,680	633	377
40. Trade of other sorts ...	17,476	4,297	246
152. General store-keeper and shop-keeper otherwise unspecified	12,054	2,867	238
153. Itinerant traders, pedlars, hawkers, etc. ...	3,041	921	303
154. Other trades (including farmers of pounds, tolls and markets),	2,361	509	216
C.—Public Administration and Liberal Arts ...	5,157	3,559	690
VI.—PUBLIC FORCE ...	19,868	261	13
44. Police ...	8,483	261	30

9. Industries of Luxury	...	1	Gird	240	22	...	218			

NOTE

ON

Chapter XII.

On scrutiny of the Industrial return, the statistics looked doubtful. Subsequent enquiry brought forth returns from 25 more different industrial establishments. The informations were received while the tables were printed off and the Report was in the course of printing. They are given on the next page in a concise tabular form.

The Table will show that besides the 5 Grass Presses, there are altogether 10 Grass Depôts in different parts of the State. These Depôts are mainly established to meet the requirements of the Military Department though private needs also are not overlooked. Most of the workers employed in them are seasonal.

Of the three Electric Power Houses installed in the towns of Lashkar, Shivpuri and Ujjain, the Lashkar one is the biggest, employing in all 205 males in different branches. In the Supervising Staff of these establishments there are four Europeans.

There are in all four distilleries in four different districts of the State. They are all conducted on a commercial scale. The distilleries have been leased out by the State, on contract system, to the highest bidder and no other private individual is allowed to run any such concern in the State.

The other two industries of Lashkar, the Tambat Brothers and Ramchandra Industrials, turn out miscellaneous articles, chiefly small useful machineries. Power is supplied for the work by the local Electric Light & Power Company.

With the exception of the Power Houses, mentioned above, and the Gwalior Civil & Military Stores, a tailoring and outfitting concern, all these industries are owned by private individuals. The former two classes are the concerns of Joint-Stock Companies Ltd.

INDUSTRIAL STATISTICS.

Later information received from Owners and Managers of the Factories which have not been included in Final Tables.

Name of Factory	District in which located.	NUMBER OF PERSONS EMPLOYED IN						CASTE OF		Kind of ownership of Company.	Kind of power used.	Number of Machines with Horse-power.	Name of article manufactured.

TABLE I.

Area, Houses and Population.

1. The Feudatory estates and the Military Stations have been included in the districts in which they are situated.
2. The Railway population is also included in the districts in which the Railway Stations lie.
3. The increase in area is due to the increased area given by some of the Feudatory estates.
4. The figures for Military Stations and Residency Headquarters are shown separately in this Table, as well as in the following five Tables. They are also included in their respective districts.
5. The figures for Sheogarh and Abhepur have not been included in the Table as the decision regarding their transfer to the Gwalior State was received too late. They are included in the Central India figures and the necessary adjustment should be made in the next Census.

TABLE III.

Towns and Villages Classified by Population.

The figures for Sheogarh and Abhepur have not been included in the Table as the decision regarding their transfer to the Gwalior State was received too late. They are included in the Central India figures and the necessary adjustment should be made in the next Census.

TABLE VI.

Religion.

1. The population of Gwalior Residency and the Military Stations of Guna, Agar and Nimach is included in their respective districts and is also separately shown for ready reference.

2. The population of 37 Estates, heretofore called Guaranteed Estates, which have this time been censused by the suzerain state, is also included in the districts in which they lie.

3. The Railway population is also included in the different districts in which the Railway Stations are situated.

4. The figures for Sheogarh and Abhepur have not been included in the Table as the decision regarding their transfer to the Gwalior State was received too late. They are included in the C. I. figures and the necessary adjustment should be made in the next Census.

Figures by religion for 1921 are:—

	Total.	Male.	Female.	HINDU.		MUSALMAN.		JAIN.	
				Male.	Female.	Male.	Female.	Male.	Female.
Sheogarh	220	119	101	96	84	20	15	3	2

TABLE IV.

Towns Classified by Population with Variation since 1881.

1. Lashkar Brigade, which was shown as separate town in 1911, is now included in Lashkar City. The number of towns is, therefore, diminished by one.
2. Sipri town is now designated as Shivpuri.
3. Col. 1 shows the class of towns according to their population as under :—

Class II Population	50,000 to 100,000
„ III „	20,000 „ 50,000
„ IV „	10,000 „ 20,000
„ V „	5,000 „ 10,000
„ VI „	under 5,000

TABLE V.

Towns arranged territorially with Population by Religion.

1. Out of 11 districts of the State there is no town in one district, *viz.*, Amjhera.
2. The districts in order of Urban importance stand thus :—

No.	District.	Total.	Males.	Females.
1	Gird ...	1,17,596	65,639	51,957
2	Ujjain ..	60,301	32,869	27,432
3	Mandasor ...	36,990	19,219	17,771
4	Shajapur ..	20,155	10,283	9,872
5	Isagarh ...	15,794	8,099	7,695
6	Narwar ...	15,189	8,157	7,032
7	Bhind ...	14,464	7,920	6,544
8	Sheopur ...	9,886	5,127	4,759
9	Tonwarghar ..	9,207	5,152	4,055
10	Bhilsa ..	8,801	4,769	4,032

3. In the above statement the population of Military Stations of Agar, Guna and of the Cantonment of Nimach is included respectively in Shajapur, Isagarh and Mandasor districts to which they belong.

TABLE VII.

Age, Sex and Civil Condition.

1. This table is divided into three parts. *Part A* shows the distribution for the State as a whole of the total population and of each religion by age, sex and civil condition, excluding Gangapur. *Part B* shows the distribution for the districts of the total population of the State, including Gangapur. *Part C* gives similar figures for the City of Lashkar although they have been included in the Gird District.

2. In *Part B* district statistics are given for the total population and the main religions, *viz.*, (1) Hindu, (2) Musalman, (3) Christian, (4) Jain, (5) Animist only and under the following age-periods, 0-1, 1-5, 5-10, 10-15, 15-20, 20-30, 30-40, 40-50, 50-60, and 60 and over.

TABLE VIII.

Education by Religion and Age.

This table shows the number of persons returned as literate, illiterate and literate in English, among the total population, by each religion and four age-periods. It is divided into three parts. *Part A* gives information for the State excluding Gangapur and *Part B* by districts including Gangapur; while *Part C* deals with the City of Lashkar.

2. Literacy of Indian Christians by age is shown in the following inset :—

Age.	TOTAL.			LITERATE.			ILLITERATE.			LITERATE IN ENGLISH.		
	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.
1	2	3	4	5	6	7	8	9	10	11	12	13
Total.	760	371	389	371	205	166	389	166	223	185	112	73
0-10	252	120	132	58	33	25	194	87	107	15	9	6
10-15	88	29	59	45	21	24	43	8	35	14	5	9
15-20	36	23	15	28	22	6	10	1	9	17	17	...
20 & over.	382	199	183	240	129	111	142	70	72	139	81	58

Of the 371 literate persons (205 males, 166 females) 145 (88 males, 57 females) are Roman Catholics and the rest 226 (117 males, 109 females) are Protestants of various denominations. There is no Syrian (Indian Christian) in the State.

**TABLE VIII.—Education by Religion and Age—Part A.—State Summary
excluding Gangapur.**

TABLE X.

Language.

In this table the languages are shown under three main heads—*A* Languages of India, *B* Languages of other Asiatic countries and *C* European Languages. Languages of India are again sub-divided into (1) proper to State and (2) not proper to State.

The languages of Gangapur Pargana are given below :—

Name of Language.				Persons.	Males.	Females.
Total ...				9,401	4,810	4,591
Brij Bhasha	1	1	...
English	1	1	...
Gujarati	7	3	4
Hindi	21	14	7
Marathi	2	2	...
Marwari	1,265	697	568
Mewati	7,871	3,971	3,900
Punjabi	10	9	1
Urdu	223	112	111

TABLE XII.

Infirmities.

This table is divided into two parts. Part I gives the afflicted persons for the State as a whole by age, and Part II the total afflicted population and their distribution by districts.

The following table gives the information of Gangapur by age :—

Age.				POPULATION AFFLICTED.			INSANE.			DEAF-MUTES.			BLIND.		
				Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.	Persons.	Males.	Females.
1				2	3	4	5	6	7	8	9	10	11	12	13
Gangapur	7	4	3	1	...	1	1	1	...	5	3	2
20-25	—	1	1	1	1	...

TABLE XIII.

Caste, Tribe, Race or Nationality.

1. This Table deals with the Castes and Tribes of Hindus, Musalmans, Jains and Animists for the State including the Pargana of Gangapur.

2. Important Castes only have been shown separately. Castes numerically insignificant have been grouped as "others."

Castes which have been grouped as "others" are shown separately in an appendix at the end of the Table.

3. The figures for Christians (Total 1,650, males 1,058, females 592) have not been shown in this Table as they are specially dealt with in Tables XV and XVI.

4. Following are the Castes of Gangapur :—

Caste, tribe, race or Nationality.	POPULATION.			Caste, tribe, race or Nationality.	Persons.	Males.	Females.	Caste, tribe, race or Nationality.	Persons.	Males.	Females.

TABLE XIV.

Civil Condition by Age for Selected Castes.

1. This Table like Table IX does not deal with the whole population but with certain selected castes, which are considered of local importance.
2. The details for Gangapur Pargana are shown separately as an appendix to this Table.

TABLE XIV.—Civil Condition

Serial Number.	C A S T E .	Locality.	Sex.	Population dealt with.	UNMARRIED.						
					TOTAL.	0—5	5—12	12—15	15—20	20—40	40 and over.

TABLE XV.

Territorial Distribution of the Christian Population by Sect and Race.

1. This Table shows the denominations of Christians of all races.
2. One Anglo-Indian male of Roman Catholic denomination belongs to Gangapur.

[illegible]

TABLE XVI.

Europeans and Anglo-Indians by Race and Age.

1. This Table is divided into two Parts. Part (a) shows the distribution of Europeans and allied Races by age and Part (b) that of Anglo-Indians.
2. No European (except one Anglo-Indian) has been returned in Gangapur.
3. Districts that do not contain Europeans or Anglo-Indians have been omitted from Parts (a) and (b) respectively.
4. There is only one Armenian male in Gird Gwalior District aged 50 and over.

TABLE XVI.—Europeans and allied races and Anglo-Indians by race and age (a) Europeans and allied races (including Armenians).

TABLE XVII.

Occupation or Means of Livelihood.

In 1911 the statistics of occupation were exhibited in Table XV and its four parts, but this time they are all shown in independent Tables with separate serial numbers. Last time information for Christians was gathered in Tables XVII and XVIII but this time it is shown in Tables XV and XVI.

2. The same scheme of classification as was adopted in 1911, is followed this time also, except that instead of 169 groups there are now 191. The alterations have been made to expand the groups and correct imperfect classification of 1911.

3. Tables XVII to XX are confined to occupation, while Table XXII and its parts deal with the statistics of industries.

4. The following groups have been omitted as there are no workers under these groups :—

6. Tea, coffee, cinchona and indigo plantations.
15. Raising of birds, bees, etc.
16. Raising of silk-worms.
19. Coal mines.
20. Petroleum wells.
21. Mines and metallic minerals (gold, iron, manganese, etc.).
28. Jute spinning, pressing and weaving.
33. Weaving of woollen carpets.
34. Silk spinners.
35. Silk weavers.
41. Furriers and persons occupied with feathers, and bristles; brush makers.
42. Bone, ivory, horn, shell, etc., workers (except button).
43. Sawers.
46. Forging and rolling of iron and other metals.
62. Manufacture and refining of mineral oils.
63. Manufacture of papers, cardboard and papier mache.

In Col. 9 of the General Schedule, none have been returned as distillers hence there are no entries in Table under that head. Subsequent enquiry shows that there are four Distilleries (Gwalior, Goona, Amjhera and Ujjain) in the State where 88 persons are at work.

92. Ship, boat, aeroplane builders.
104. Persons concerned with aerodromes and aeroplanes.
105. Persons (other than labourers) employed in harbours and docks including pilots.
106. Labourers in harbour works and docks.
107. Ship owners and their employees, ship brokers, ships' officers, engineers, mariners and firemen.
157. Navy.
158. Air force.
175. Public scribes, stenographers, etc.

TABLE XVIII.

Subsidiary Occupations of Agriculturists.

1. This Table is identical with Table XV, Part B, of the last Census.
2. It deals with the subsidiary occupations of agriculturists (actual workers only) and is divided into three parts :—
 - (1) Rent receivers,
 - (2) Rent payers, and
 - (3) Farm Servants and Field labourers

TABLE XVIII.—Subsidiary Occupations of
(2) *Rent*

Serial Number.	DISTRICTS.	Total number of rent payers (actual workers).		Number of actual workers who returned subsidiary occupations.		DETAILS OF SUBSIDIARY

TABLE XXI-A.

Occupation by Selected Castes, Tribes or Races.

This Table is divided into two parts.—Part A corresponds to Table XVI of last Census.

It is compiled on the present occasion for Europeans, Anglo-Indians and Armenians and some important castes of the State.

Part B is optional and is prepared only for Lashkar City.

The figures for Gangapur Pargana are appended at the end of the Table.

TABLE XXI-A.—Occupation of

Serial Number.	Caste, Tribe or Race.	Traditional Occupation.	POPULATION DEALT WITH.			NUMBER OF ACTUAL WORKERS WHOSE TRADITIONAL CASTE OCCUPATION WAS RETURNED AS THEIR				Number of actual Workers returning their Traditional occupation as their principal means of livelihood who had some subsidiary Occupation.	
			Actual workers.		Depend-ants.	Principal means of livelihood.		Subsidiary means of livelihood.			
			Males.	Females.	Both sexes.	Males.	Females.	Males.	Females.	Males.	Females.

**TABLE XXI-B.—Distribution of Workers in Certain Groups of Occupation by Caste, Tribe or Race
for the City of Lashkar.**

[illegible]

TABLE XXII.

Industrial Statistics.

This is identical with Table XV, Part E, of the last Census and is divided into 7 parts. Part VI is again split up into three sub-parts.

The information supplied in these Tables was collected on separate Industrial Schedules filled in by the owner or manager of each factory, mill, etc., where ten or more persons were employed.

Part VI (2) is not compiled as there is no establishment where electric power is generated on the premises.

In Central Jail, Lashkar, there are three Industries, *viz.*, (1) cotton weaving, (2) wool weaving, and (3) furniture and so cotton weaving alone is given number—the others are left blank.

TABLE XXII—Industrial Statistics—Part I.—State Summary.

CLASSIFICATION OF PERSONS EMPLOYED.																							
Description of Establishment.	Classification of establishment according to number of persons employed (including management).	Number of Establishments	Total of persons employed.		DIRECTION, SUPERVISION AND CLERICAL STAFF.										SKILLED WORKMEN.				UNSKILLED LABOURERS.				REMARKS.

PROVINCIAL TABLE I.

Area and Population by Parganas.

1. The figures shown in this Table are inclusive of Gangapur.
2. The figures for Sheogarh and Abhepur have not been included in this Table as the decision regarding their transfer to the Gwalior State was received too late. They are included in the Central India figures and the necessary adjustment should be made in the next Census.

The figures are :—

		1921			1911
		Total.	Males.	Females	Both sexes.
Sheogarh	...	220	119	101	237
Abhepur	...	38	25	13	38
Total	...	258	144	114	275
